

Shadowrun 7th Edition Homebrew: The Merged World

The confluence of eldritch power and frighteningly advanced technology has forcibly merged the Matrix with the giasphere. The grey goo ate the world and spit it back out. Welcome to the 6th World, where everything has an AR signature and magic is bleeding into the code.

I. Core Mechanics: Dice & Tests

All actions use a streamlined success-counting system.

- **Dice Pool:** Attribute + Skill.
- **Hits:** All tests use six-sided dice (D6). A result of **5** or **6** is a Hit.
- **Glitches:** If more than half the dice rolled are **1s**, you Glitch (a complication occurs). If you Glitch with 0 hits, it's a **Critical Glitch** (catastrophe).
- **Rule of 6 (Ro6):** When applicable (e.g., using Edge), a rolled 6 counts as a hit and is rolled again.
- **Wild Dice:** Used in high-mana or nanite-saturated areas. Roll these with a different colored die. A **6** counts as **3 hits** (and explodes if Ro6 applies). However, a **1** cancels all standard **5s** rolled in that pool.

II. The Matrix & The Giasphere

The Matrix is no longer separate from reality; it is a nanite-infused environment. Even the hermit in the woods is lit up with an AR signature because the water and air are crawling with nanites.

- **No Cold Sim (The Abyss Looks Back):** Cold Sim is dead. Any active skill involving the Matrix requires a Direct Neural Interface (DNI), and all DNI connections are Hot Sim. You put your brain and soul on the line. Acting in AR without DNI limits your dice pools to the flat stats of your commlink or cyberdeck.
- **Aspected Noise:** Distinct corporate grids are gone. "Noise" now acts exactly like a magical Background Count. It has surges, voids, and aspects (Matrix Ley Lines) that can provide **Wild Dice** or severe penalties depending on the local grid.
- **Ritual Hacking:** Remote hacking without a direct connection functions like Ritual Spellcasting. Personal data (SINs, biometric data, deeply personal secrets) acts as a sympathetic "material link." The older the data, the more the link degrades.

Updated Matrix Actions: Tethers & G.O.D.

- **Tethers (Replacing Marks):** Marks act like sympathetic bonds. Placing a Tether on a device/persona requires an Opposed Test (*Logic + Hacking*

vs. *Willpower + Firewall*). Each Tether gives +1 Die on subsequent actions against them. *Warning:* If you Glitch while exploiting a Tether, the two-way connection gives the target a free blast of Biofeed-back against you.

- **G.O.D. Manifestations:** Grid Overwatch is now a localized, immune-system response from the merged giasphere. Instead of a flat timer, when a hacker rolls a **1 on a Wild Die** during a Matrix action, it summons a G.O.D. manifestation (a lethal Sprite/Spirit hybrid) directly to their digital location.

III. Magic, Resonance, and the Soul

Consciousness equals a soul. The line between flesh and data is permanently blurred, but Tech and Magic still ruthlessly repel each other.

- **Digital Essence (Turing 1, Searle 0):** Any AI, Sprite, or Matrix entity complex enough to possess a self-directed persona has an **Essence of 6**, an Aura, and counts as a living being. They are vulnerable to Essence Drain and can grow or heal Essence just like metahumans. Digital Essence acts exactly like metahuman Essence for the purposes of social interaction and determining the entity's baseline willpower. Should a digital entity lose Essence (e.g. through traumatic data loss or being subjected to Essence Drain), they suffer penalties to their mental attributes and social tests, reflecting their fading identity. Losing all 6 Essence means the entity has been reduced to mindless, fragmented code and is destroyed.
- **Essence Growth:** Essence is not just what you are born with; it is who you are and what you become. Lost essence can be regained through Karma, role-play, and character growth.
- **Oil and Water:** Tech and magic are in contact, but they do not mix. No entity can ever possess both a Magic (MAG) and Resonance (RES) attribute simultaneously.
- **Background Count (BC) & The Wild Edge:** The normal BC of Seattle fluctuates between 1–6 (GM rolls 1D6). When casting in a positive BC, you substitute a number of dice in your pool with **Wild Dice** equal to the BC level. You may also Overcast a spell by adding its Force up to the BC level, adding 1 to the Drain Value for every Force level above your MAG rating.

IV. Spirits, Sprites, and Hybrid Entities

With the veil parted, digital and astral entities interact in entirely new ways.

- **Manifesting Sprites:** Sprites can physically manifest by swarming nanites into a dense ball, literally

munching ambient physical matter to build a temporary shell. The smarter the Sprite, the harder it is for a Technomancer to control.

- **Crystalline Spirits:** These ancient spirits of order transmute matter into “living crystal.” They act as a magical “bootloader,” allowing AIs to manifest a physical presence and an astral aura.

1. Unified Control & Possession Rules

The mechanics of taking control of another form—whether through a spiritual *Possession*, a rigger *Jumping-In* to a drone, an AI *Inhabiting* a vehicle, or a user suffering a *BTL Override* (like the Fuchsia Dragon)—follow a unified ruleset:

- **Control Override:** The host’s original stats are suppressed but not destroyed. The possessing entity uses its own mental attributes (**LOG, INT, WIL, CHA**). Physical attributes (**BOD, AGI, REA, STR**) are typically the host’s (with any specific modifiers, such as +3 **STR/BOD** from a Fuchsia Dragon Sprite or a vehicle’s frame).
- **Biofeedback / Damage Sharing:** Because the host (whether meat, drone, or vehicle) is saturated with grey goo or mana, the possessing entity connects to it on a spiritual or deep digital level. If the host takes Physical damage, the possessing entity must resist half of that damage (rounded down) as Stun Biofeedback. This is resisted with **WIL + BOD**.
- **Destabilization / Destruction Risk (Dumpshock / Extrusion):** If the host’s Condition Monitor is filled and it is destroyed while possessed, the possessing

entity suffers severe trauma and is violently ejected. They immediately take 6 unresistable Stun damage and suffer a -2 Dice Pool modifier to all actions for (12 - **WIL**) minutes.

- **Initiative Adjustment:** The possessing entity rolls Matrix/Astral Initiative (e.g., Data Processing + Intuition, or **REA + INT**) and gains +1 Initiative Die per level of their connection strength (e.g., Control Rig rating for riggers, or Force/Magic rating for spirits/sprites).
- **Inhabitation (The Merger):** A temporary possession can violently escalate into a permanent, physical merging creating a dual-natured hybrid.
 - *For Spirits:* If a spirit permanently Inhabits a host, the host’s personality is destroyed but their physical skills are retained. If the host is a Technomancer, their Resonance stat is permanently destroyed (reduced to 0 due to the Oil and Water rule).
 - *For BTLs:* For users of Physical Override chips (like the Fuchsia Dragon), if the user takes Physical damage exceeding their Willpower while transformed, the temporary Sprite possession becomes permanent Inhabitation, permanently overwriting the user’s mind and turning them into a feral, dual-natured NPC.

V. Character Creation Summary

All characters build and advance using **Karma**.

Special Quality	Karma Cost	Primary Benefit
Magician	100	Access to all magical skills; gains 2x MAG free spells.
Technomancer	80	Access to Resonance; gains 2x RES Complex Forms.
Adept	75	Free Power Points equal to MAG rating.
Aspected Magician	50	Specialized focus; gains 3x MAG free spells.
Mystic Adept	150	Blends Adept and Magician traits; gains 1x MAG free spells.

(Note: Magic and Resonance both start at 0. You must buy one of these qualities at character generation to unlock the stat, which starts at Rating 1).

1. Dice & Tests
2. Character Creation & Advancement
- 3.

Dice & Tests

To Hit, or to Glitch:

Every **Action** taken by a character that is important to the narrative, or an Action that is difficult beyond an everyday, normal encounter requires a **Test** to see if it succeeds or fails. Similarly, any Action that is opposed by another character, or an Action that could potentially have negative consequences requires a Test. Common, everyday occurrences do not require rolling any dice. At GM discretion, any Action that is trivially within your skillset requires no Test.

A Test's success or failure is measured by rolling a number of dice equal to the **Dice Pool** for the task at hand. Generally this Dice Pool takes the form of the relevant **Skill** rating and its **Linked Attribute** rating. All dice used are six sided, D6, and count as a **Hit** if rolled as a 5 or a 6. The more Hits rolled the more likely you are to succeed, or the more impactful your success may be. **Dice Pool Modifiers** from gear, spells, abilities, or the environment may raise or lower the number of dice in the Dice Pool for any given task. When a die result is anything other than a 5 or a 6, it is a **miss**. Normally rolling many misses has no effect; you may still have enough Hits to succeed. However, if more than half of the dice results are a 1 then you '**Glitch**'. When a Glitch occurs something bad happens to inconvenience your character at the GM's discretion; dropping your gun, falling off balance, etc. It is possible to both succeed at a Test by rolling enough Hits and Glitch by rolling more than half 1's simultaneously; *e.g.: you succeed at punching your target, but you overextend throwing the punch so hard that you slip and fall in the process.*

Critical Glitch:

If you Glitch on a Test and do not roll a single Hit then you have made a **Critical Glitch**. A Critical Glitch is a serious mishap or setback, potentially even damaging or life threatening to the character. Some examples would include your gun exploding in your hand on a misfire, your brakes malfunctioning during a high speed chase, or miraculously throwing the pin while keeping hold of the grenade. Critical Glitches should not always result in instant character death, and they can be downgraded with the use of **Edge**.

Buying Hits:

For every 4 dice available in your Dice Pool you may buy 1 automatic Hit on a Test instead of making a roll. If the Test is significant and a potential failure or Glitch could change the course of play, the GM may disallow buying hits for that Test. Buying Hits may not be combined with rolling dice; you may NOT spend part of your Dice Pool on buys and roll the remainder.

Thresholds:

The **Threshold** for a Test is the number of Hits required to succeed. Any extra Hits rolled above the Threshold's requirement become **Net Hits**. Net Hits can result in more damage in combat or other positive effects, at GM discretion. Unless stated in the rules for a specific Action or listed as a Derived Threshold for an NPC Opposed Test, the GM determines what the Threshold, or difficulty, is for each individual Test.

Test Types:

The normal **Success Test** for most Actions involves a simple Dice Pool consisting of the relevant Skill rating, the Linked Attribute rating, and the GM's stated difficulty,

or Threshold. *E.g.: A player with Athletics rating 4 and Strength rating 4 is attempting to swim upriver against a strong current. The GM determines their Threshold for the Test is a 4 and they roll a total of 3 Hits from their 8 dice; they have failed the Test.*

Success Test = Attribute + Skill (Threshold)

Another type of Test is an **Extended Test**, which allows you to roll your Dice Pool multiple times until you have accumulated enough Hits to meet the Threshold. This Test adds an **Interval** representing how much time is required for each roll of the dice, or how much time must pass between attempts. Extended Tests are usually something you will succeed at eventually, unless you run out of time or encounter something that prevents you from continuing. Glitches on an Extended Test will reduce the accumulated number of Hits by 1D6; if the number of Hits is reduced to 0 the Test fails. Critically Glitching on an Extended Test automatically fails the Test in addition to consequences the GM determines. When an Extended Test fails you must completely restart to attempt it again; this also means replacing any required materials or resources that were expended in the first attempt.

Extended Tests can be rushed and their listed Interval halved, but doing so counts all 1's and 2's rolled for determining if a Glitch or Critical Glitch has occurred.

Extended Test = Attribute + Skill (Threshold, Interval)

When an Action is actively opposed by another character an **Opposed Test** is required. This is treated the same as a Success Test, but in place of a Threshold the opposing character rolls their own Dice Pool and the Hits from each are compared. Whichever side rolls more Hits wins and the excess Hits they rolled become Net Hits.

Opposed Test = Attribute + Skill (target's Attribute + Skill)
When opposed by a NPC it is advised to use the **NPC Opposed Test** in the interests of speeding up gameplay. This pits the character's Dice Pool against the NPC's **Derived Threshold** or difficulty rating instead of rolling a Dice Pool and tallying Hits for the NPC. This Test can also be used when a character is the target of a NPC Action, pitting the NPC's difficulty rating or Derived Threshold against a character's opposing Dice Pool.

NPC Opposed Test = Attribute + Skill (NPC rating)

NPC Opposed Test = NPC rating (Attribute + Skill)

The GM may call for an **Attribute Test** in some circumstances. This may be a single Attribute rolled against a threshold, *e.g.: using Strength to force a door open*. Some physical or mental capabilities of a character may be derived from two Attributes instead of forming the Dice Pool from an Attribute + a Skill.

Attribute Test = Attribute (Threshold)

A **Composure Test** is used to overcome emotionally strenuous or dangerous and frightening situations. It is

also used by characters to resist many types of compulsions or instinctive reactions.

Composure Test = CHA + WIL (Threshold)

When a character needs to know their gut instinct or questions if they can trust others, an opposed **Judge Intentions Test** may be made at GM discretion, usually when directly in a conversation or physically near the target character.

Judge Intentions Test = CHA + INT (target's WIL + CHA)

Attempting to lift or carry a large weight may require a **Lift/Carry Test**. Characters may normally lift a weight equal to their STR x 15 kg without any Test required; a weight beyond this requires a successful Lift/Carry Test with each hit increasing the weight you may lift by an additional 15 kg. Lifting weight above your head requires more effort, dropping the normal limit to STR x 5 kg and increasing by 5 kg with each hit on the Lift/Carry Test. Carrying heavy items beyond your immediate reach uses a baseline of STR x 10 kg and a 10 kg increase with each hit.

Lift/Carry Test = BOD + STR

Any time a character attempts to memorize something, or to later recall that information, they must make a **Memory Test**. All hits scored to memorize add dice later to a **Recall Test** for recalling that info. Be sure that you or the GM record the number of hits. You may not make additional Memory Tests on the same object, word, image, thought, or concept to stack up this dice bonus. Memory Test = LOG + WIL

Recall Test = LOG + WIL (Threshold)

Trying Again:

If you fail a Success Test or Extended Test and other circumstances do not prevent doing so, you are welcome to try again. Each successive attempt incurs a -2 dice pool modifier unless the GM deems you have spent enough time taking a break between attempts. This penalty is never applied to Opposed Tests.

Teamwork:

More than one character can attempt a Test together as a **Teamwork Test**. One character is designated the leader; all others are helpers and roll their dice pools as they normally would if they were attempting the Action alone. Any net hits scored by the helpers become bonus dice for the leader's dice pool, who then attempt the Test per normal rules. GM discretion applies to what can or can't be helped with, and whether the helpers must make a different type of Test than the leader.

Defaulting:

When attempting a Test with a character who has no rating in a Skill, or is **Untrained** in the Skill, you may still attempt the Test by **Defaulting**. Use only your Linked Attribute as a dice pool, with a -1 dice pool modifier.

Rule of Six:

When various Spells, gear, or Edge Abilities grant it, dice rolled may be subject to the **Rule of Six (Ro6)**. Any die that comes up a 6 counts as a hit and then may be rolled again. Dice continue to be re-rolled until they are a result other than 6.

Wild Dice:

Similar to the rule of six, various situations may result in the use of **Wild Dice**. These are special dice, denoted by a different color, that are used in addition to or in place of the regular dice. Wild Dice function the same as other dice; a roll of 1 is a miss and counts for a glitch, while 5's and 6's are hits. Where they differ from normal dice is that a roll of 6 "explodes" into 3 hits instead of 1 hit, and a result of 1 on any rolled Wild Die negates all 5's rolled, including normal dice, counting them as a miss instead of a hit.

Example: A character rolls a dice pool of 5 dice, which includes 2 Wild Dice. They roll 2, 5, 5 on their normal dice, and a 6 and a 1 on their Wild Dice. The 6 on the Wild Die counts as 3 hits. However, the 1 on the other Wild Die cancels out the two 5s rolled on the normal dice. The final result of the test is 3 hits (from the 6 on the Wild Die). If the player had also rolled a 6 on a normal die, that hit would not be canceled by the 1 on the Wild Die, resulting in 4 hits total.

Thresholds (Success Tests)	Thresholds (Extended Tests)	Intervals
1 - Simple	4 - Simple	Fast - 1 combat turn
2 - Easy	8 - Easy	Quick - 1 minute
3 - Normal	12 - Normal	Short - 10 minutes
4 - Difficult	16 - Difficult	Average - 30 minutes
5 - Hard	20 - Hard	Long - 1 hour
6 - Very Hard	24 - Very Hard	Consuming - 1 day
7 - Extreme	32 - Extreme	Exhaustive - 1 week
		Mammoth - 1 month

Character Creation & Advancement

The Sum of Your Actions:

Every player character uses the same resource for both initial character creation and character advancement. Your character begins with a large pool of **Karma** you may spend to flesh out your character concept and through gameplay accrue additional Karma to improve. With few exceptions, creation and advancement follow the same rules and use the same Karma costs.

Physical, Mental, & Special Attributes:

The basic building blocks of all characters are their Attributes. These come in the form of **Physical** Attributes, such as **Strength** or **Agility**, and **Mental** Attributes, such as **Willpower** or **Charisma**. Every character has a **Special** Attribute in the form of **Edge**, while awakened characters may also have **Magic** or **Resonance**. **Initiative** and **Essence** are also treated as Special Attributes, but may not be bought or increased with Karma.

The cost to increase Physical or Mental Attributes is 5 Karma multiplied by the new rating of the Attribute; e.g.: *Raising Strength 1 to Strength 2 would cost 10 Karma, while raising Strength 2 to Strength 3 would cost 15 Karma*. During character creation Attributes may be raised any number of times, but only a single Physical or Mental Attribute may be raised to a character's **Metatype Maximum**. During gameplay a character may raise a single Attribute by 1 rating during any downtime as long as the GM agrees the downtime is sufficient and they have the required Karma to spend. Additionally, during character creation a character must spend Karma to raise each of their Mental and Physical Attributes to a minimum rating of 2. Special Attributes may be raised during creation and advancement in the same way as Physical or Mental Attributes, but cost twice as much at 10 Karma multiplied by the new rating; e.g.: *Raising Magic 3 to Magic 4 would cost 40 Karma*. Characters may gain access to the Special Attributes of Magic or Resonance by taking appropriate choices to become magically active or to become a Technomancer. Both Magic and Resonance may not be raised higher than rating 6 during character creation, regardless of metatype.

Physical Attributes:

Body (BOD) - Physical health and resiliency. Covers how much **Physical Damage** a character may sustain and how well they resist taking Physical Damage, as well as healing damage and resistance to **Toxins** and **Diseases**.

Agility (AGI) - Balance, flexibility, hand-eye coordination, and nimbleness. Agility determines how well you can strike a target in combat, moving stealthily, gymnastic ability, and dexterity with sleight of hand.

Reaction (REA) - Reflexes and awareness. How quick you can act in combat, how well you can avoid being hit, and how quickly you can react when operating a vehicle.

Strength (STR) - Physical power and ability. Strength determines melee combat damage and how much a character can lift or carry, and helps with athletic tasks such as climbing, running, or swimming.

Mental Attributes:

Willpower (WIL) - Willpower is primarily used to resist **Stun Damage** and to handle the weariness of using magical abilities. It is also used for staying calm under strenuous or dangerous situations.

Logic (LOG) - Calculating and rational parts of the mind; useful for building, operating, and repairing mechanical, biological, and electronic systems. Logic can also apply to magical creations, particularly alchemical formulas.

Intuition (INT) - Instinct and gut feeling; used to anticipate or predict what is going on in the world around you. May also factor into a character's innate ability to learn and understand complex concepts.

Charisma (CHA) - Force of personality and charm; used to seduce, convince, influence, or intimidate. Useful for all social situations and more charismatic magical traditions.

Special Attributes:

Edge (EDG) - A character's luck; what makes them special and what makes them stand out from the rest of society.

Essence (ESS) - Essence is the holistic integrity and well being of a metahuman body. All characters begin with 6 Essence, and die if their Essence ever drops to 0. Essence is not necessarily what you are born with, but who you are and what you become. Essence can be regained through experience points, rituals, and character growth (e.g. going to therapy to reconcile being a "blood thirsty cyborg killing machine").

Initiative (INI) - Initiative is a derived Attribute from combining Reaction and Intuition. It determines how quickly a character acts during Combat Rounds.

Magic (MAG) - How capable a magically active character is and how powerful their abilities are.

Resonance (RES) - The strength of a Technomancer's mind and ability to connect with the Matrix.

Gaining Special Attributes:

All characters begin with 6 **Essence**, at least 1 **Edge**, and **Initiative** derived from REA + INT. Essence may never be purchased or raised and Initiative is derived from other Attributes, but your Edge rating may be raised with normal Karma expenditure at a cost of 10 Karma multiplied by the new rating. In order to gain the Special Attributes of **Magic** or **Resonance**, you must choose at character creation to be magically active or in tune with the matrix via **Special Quality** selection. Qualities available include *Magician*, *Aspected Magician*, *Adept*, *Mystic Adept*, and

Technomancer. You may only take 1 of these Qualities and must pay the full Karma cost and be subject to all of the Quality's effects. When a character gains a magically active Special Quality they gain a Magic rating of 1 and the Negative Qualities *Nano Intolerance* and *Sensitive System* without Karma bonuses, while taking the *Technomancer* Quality gives a Resonance rating of 1 and the Negative Quality *Sensitive System* without a Karma bonus. Any effects during character creation based on Special Attribute ratings are applied to the modified ratings after Karma expenditure, not to the initial rating of 1, unless you choose not to raise your Magic or Resonance beyond rating 1; *e.g.*: *A character takes the Sorcerer Special Quality of Aspected Magician, gaining a Magic rating of 1. Sorcerer states that you will receive 3x your Magic rating worth of Spell Value points for purchasing Spells. In this case the Spell Value points would not be calculated immediately with the Magic rating of 1, but would be calculated after Karma had been spent to raise the character's Magic rating.*

Special Qualities:

Aspected Magician - 50 Karma A character taking the *Aspected Magician* Quality must choose one of the following: **Sorcerer**, **Enchanter**, or **Conjurer**. No matter the choice you gain access to the Assensing Skill and Astral Perception Skill.

Sorcerer - Gain access to the Spellcasting and Counterspelling Skills. During character creation receive 3x MAG rating worth of Spell Value points.

Enchanter - Gain access to the Enchanting and Disenchanting Skills. During character creation receive 3x MAG rating worth of Alchemical and/or Artificing Formulae Value points.

Conjurer - Gain access to the Conjuring and Banishing Skills. During character creation receive 3x MAG rating worth of Spirit Names.

Magician - 100 Karma The *Magician* Quality, known as a **Full Magician**, grants access to the Assensing, Astral Combat, Astral Perception, Astral Projection, Spellcasting, Conjuring, Enchanting, Counterspelling, Banishing, and Disenchanting Skills. During character creation a Full Magician receives 2x MAG rating worth of Value points for free to purchase their starting Spells, Formulae, and Spirit Names.

Adept - 75 Karma Physical Adepts gain a number of **Power Points** equal to 4x MAG rating to spend on **Adept Powers** during character creation.

Mystic Adept - 150 Karma Mystic Adepts have both the full benefits of the *Magician* Quality and the *Adept* Quality: gain access to the Assensing, Astral Combat, Astral Perception, Astral Projection, Spellcasting, Counterspelling, Conjuring, Banishing, Enchanting, and Disenchanting skills, and gain access to Adept Power Points. During character creation a Mystic Adept must choose how to split their MAG rating; each point of MAG rating towards Adept Powers translates to 4 Power Points, while all other points grant 2x Value worth of free Spells, Formulae, and/or Spirit Names.

Technomancer - 80 Karma Technomancers gain 3x RES rating worth of Complex Form Value points

Races of the 6th World:

Every character hails from a different strain of metahumanity, referred to as their **Metatype**. Every Metatype aside from base Humans has an associated Karma cost at character creation. The various strains of metahumanity have different minimum and maximum Attributes than the Human norm, and usually have positive or negative qualities, such as enhanced vision or allergic weaknesses. The Karma cost for each Metatype has been balanced to consider both their starting minimum Attributes and their potential for growth at maximum Attribute levels, as well as any innate qualities.

Race	BOD	AGI	REA	STR	WIL	LOG	INT	CHA	EDG	Karma Cost	Traits
Human	1 / 6	1 / 6	1 / 6	1 / 6	1 / 6	1 / 6	1 / 6	2 / 7	2 / 7	0

Skills:

Most Actions taken by a Shadowrunner involve the use of a **Skill**; their Skill rating combined with the rating of the **Linked Attribute** from the chosen Skill forms their Dice Pool for all Actions; *e.g.: Spellcasting is linked with a character's Magic attribute, so their Dice Pool would be Spellcasting rating + MAG rating.* **Active Skills** are used for most typical Actions, while **Language Skills** govern speaking or writing a language fluently, and **Knowledge Skills** come into play for determining what information your character may know about a variety of subjects. At character creation all Skills start at rating 0 (**Untrained**) and may be raised with Karma. A single Skill can be raised to a maximum rating of 6 during character creation; all others cannot rise above rating 5. Beyond character creation, you may raise a Skill up to rating 10 and possibly even higher with relevant Qualities. In both creation and advancement, the cost to raise Active Skills is 5 Karma multiplied by their new rating; *e.g.: Raising Spellcasting from rating 4 to rating 5 would cost 25 Karma.* Knowledge Skills and Language Skills are cheaper at a cost of 2 Karma multiplied by the new rating. You may increase the rating of any Skill by 1 point during downtime, at GM discretion. At character creation you receive one free Language Skill at Native (N) rating, and free Karma to spend on Knowledge and Language Skills equal to 15x your combined Logic (LOG) and Intuition (INT) ratings.

Specializations & Expertise:

A **Specialization** may be taken for any Skill you have

raised to at least rating 4. Specializations must be for a specific or narrowed use of a Skill, or with a particular subgroup or subclass; *e.g.: A Magician could Specialize in Spellcasting (Illusion) or Conjuring (Binding), while a Street Samurai could Specialize in Firearms (Pistols) or Close Combat (Blades).* When taking a Specialization you gain a +2 dice pool modifier for use of that Skill when using it in accordance with the Specialization; *e.g.: A Street Samurai with Firearms (Pistols) would gain a +2 modifier when shooting their Ruger Super Warhawk (a pistol), but would receive no bonus with their Colt M22 (an assault rifle).* Specializations may be gained once during any downtime, or at character creation, at a cost of 10 Karma for Active Skills and 4 Karma for Knowledge and Language Skills; characters are limited to a single Specialization for each Skill at any time. **Expertise** is a further step from Specialization, but grants a +3 dice pool modifier in place of a Specialization's +2 modifier. An Expertise replaces a previously acquired Specialization, subsequently allowing room for a new Specialization in that Skill, and requires the chosen Skill to be at least rating 6. Expertise costs 15 Karma for Active Skills and 7 Karma for Knowledge and Language Skills. At GM discretion Expertise may require specialized training or instructors. Characters are limited to a single Expertise for a given skill and no more than 3 total Expertise at any time.

Magic & Resonance Advancement:

New Spells and Complex Forms cost 5 Karma each to learn. Each downtime a character may learn 1 new Spell

or Complex Form. At character creation a Magician receives 2x MAG free Spells, an Aspected Magician receives 3x MAG free Spells, and a Mystic Adept receives 1x MAG free Spells. Technomancers receive a number of free Complex Forms up to 2x RES.

Adepts receive free Power Points equal to their MAG special attribute.

Initiation and Submersion for characters costs 10 + (Initiation Grade x 5) Karma and 10 + (Submersion Level x 5) Karma respectively.

Magic & The Astral:

Spellcasting: Casting a spell requires **1 Action**. Declare the spell and at what Force it is cast (up to your MAG rating). Roll MAG + Spellcasting opposed by: - BOD + WIL for Direct Physical Spells - WIL + INT for Direct Mana Spells - REA + INT for Indirect Spells

Damage for all spells is **Force + net hits**. Direct spells are resisted with ESS + WIL. Indirect spells are resisted with BOD + ARM and the spell has an Armor Penetration (AP) equal to its Force. After casting a spell, the caster resists drain with WIL + tradition's attribute (usually LOG or CHA).

Reckless Spellcasting: Casting a spell can be done as a Free Action (costing 0 Actions), referred to as **Reckless Spellcasting**, but the Drain Value is increased by +3.

Background Count & Wild Dice: The standard Background Count (BC) of Seattle ranges from 1-6; if a BC is needed, the GM rolls 1D6 for the current level. Positive BC allows **overcasting** a spell by adding Force up to the BC level (e.g., a character with MAG 6 in an area with BC 3 may overcast a spell at up to Force 9).

Whether overcasting or not, a spell cast in a positive Background Count substitutes a number of regular dice in the MAG + Skill test with **Wild Dice** equal to the BC level. *For example, a character with MAG 6 and Spellcasting 6 casting a spell in an area with BC 4 rolls 12 dice total, 4 of which must be Wild Dice, regardless of the Force the spell is cast at.* - **Overcasting Penalty:** Overcasting adds 1 to the Drain Value for every level of Force a spell was cast at above the character's MAG rating. *(e.g., a MAG 6 character overcasting a spell at Force 8 that normally has 6 Drain will face 8 Drain instead).*

The Astral & Entanglement: Mundanes cannot astrally project, but they can be trained to "feel the chills" and perceive the flow of the astral, allowing them to internalize the sensations and provide crucial support during magical encounters.

The Astral plane is tied to the physical plane through shared entanglement. Therefore, disrupting the astral does not always require magic; it is often achieved by completely separating all living entities in the area (either by physically removing them or killing them all). Without

physical tethers, the astral environment decoheres and shifts away to a different state. Large astral entities require a local physical manifestation to remain anchored. Without one, they risk decoherence and drifting in the astral, away from the physical location. Devices that create null or dead zones can also be deployed to disrupt astral entities in this way, giving mundane team members a critical role in neutralizing magical threats.

The Nanite-Infused Matrix: The events of "Cold Storage" fundamentally altered the relationship between magic and technology. The Matrix is now infused with nanites everywhere, breaking the old barriers: machines and AI can now touch magic. The Matrix exists ubiquitously—there are no necessary physical terminals to plug into. Instead, ports and connections physically manifest from the nanite structures wherever the story demands them (similar to *BLAME!*).

Because of this ubiquitous nanite backing, Augmented Reality (AR) is deeply integrated into the world. AR wearers can see the nanite-backed Matrix manifesting around them. From a story perspective, characters utilizing AR can potentially manifest new abilities or use technology to directly augment their physical and mental capacities, blending the line between the physical world and the digital one.

Combat Skills:

Combat skills are Active Skills that are linked with Agility unless otherwise noted.

Close Combat - The Close Combat skill is used for attacking opponents in melee range. This covers unarmed strikes, wielding clubs, blades, or other melee weapons.

Quality of Life:

A **Quality** represents various natural bonuses or penalties a character receives, each with their own unique Karma value. Every shadowrunner may take up to 30 Karma worth of **Positive Qualities** at character creation, and may gain no more than 30 bonus Karma worth of **Negative Qualities**. This 'bonus' Karma from Negative Qualities can be spent on any other form of Karma cost during character creation. Normal character advancement doubles the Karma cost to acquire Positive Qualities, while Negative Qualities cost twice their Karma value to buy off or remove during normal gameplay beyond character creation.

Qualities have a collection of tags associated with them based upon their purpose or background to represent their type. These include **Adept, Combat, Defensive, Gear, Healing, Initiative, Knowledge, Magic, Matrix, Mental, Meta, Physical, Rigger, Skill, Social, Stealth, Technomancer, and 'Ware**. There are also specific metatype tags, usually for Qualities that are innate to that metatype. During character creation a player may choose one type of Quality and receive a -1 Karma cost

discount on Positive Qualities of that type and a +1 Karma bonus on Negative Qualities of that type; *e.g.*: A character with Defensive as their chosen Quality type could take the Acrobatic Defender Quality for a cost of 3 Karma instead of the standard 4 Karma.

Positive Qualities: Reality Warper - 20 Karma

A character with *Reality Warper* blurs the lines between Resonance and Mana, allowing them to affect the physical world with matrix actions or vice-versa under certain conditions (GM discretion).

Acrobatic Defender - 4 Karma (Defensive Quality) Substitute Gymnastics Skill rating for WIL on Full Defense.

Adept Healer - 10 Karma (Adept, Healing, Magic Quality) Requires Adept Power Empathic Healing. When you use Empathic Healing to transfer damage, each hit removes 3 damage and transfers 2 damage to you.

Adrenaline Surge - 12 Karma (Combat, Initiative Quality) *Adrenaline Surge* allows a character to act first in the first round of a combat encounter, regardless of what their Initiative Score was. If other characters have *Adrenaline Surge* or spend Edge to act first, then all of these 'acting first' characters compare their Initiative Scores and, if tied, the standard ERIC to determine turn order among themselves. This quality does not allow a Surprised character to act before their ambushers.

Agile Defender - 3 Karma (Defensive Quality) Substitute AGI for WIL on Full Defense.

Alibi - 6 Karma (Social Quality) Receive a +2 dice pool modifier for Con Tests when you have plausible-seeming evidence, at GM discretion.

Ambidextrous - 6 Karma (Combat Quality) No penalty for using off-hand weapons. Quick drawing weapons with both hands while ambidextrous reduces the Weapon Skill + REA (4) Test to a (3) difficulty.

Analytical Mind - 5 Karma (Matrix, Mental Quality) Receive +2 dice pool modifier for all Logic linked tests involving pattern recognition, evidence analysis, clue hunting, or puzzle solving. *Analytical Mind* also provides this bonus for all Data Search Tests and Software Tests.

Animal Empathy - 6 Karma (Magic, Social Quality) Receive +2 dice pool modifier on all tests to control or influence an animal or awakened creature.

Aptitude (Skill) - 15 Karma (Skill Quality) This quality allows a character to raise the selected skill to rating 11 instead of the normal limit of 10. This also allows the selected skill to be raised to a maximum of 7 during character creation instead of the normal limit of 6, or at character creation two skills may be at rating 6 as long as one of them is the chosen *Aptitude* skill. *Aptitude* may only be taken once.

Apt Pupil - 12 Karma (Knowledge, Magic Quality) Only available to Magicians, Aspected Magicians, and Mystic Adepts. Learning new Spells costs 3x Spell Value Karma instead of the normal 5x. If combined with *Dedicated Spellslinger* these qualities reduce the cost of learning new Spells to 2x Spell Value Karma.

Arcane Arrester - 0 Karma (Gnome Quality) For each level of *Arcane Arrester*, a character gains a +1 dice pool modifier for Spell Resistance Tests. This quality may not be chosen by characters, but is innate to Gnomes. Voluntary spells cast against a character with *Arcane Arrester*, such as healing spells, require rolling the character's bonus Spell Resistance Dice and subtracting their hits from net hits scored on the spell.

Arcane Bodyguard - 20 Karma (Defensive, Magic Quality) Double your available Counterspelling dice, and double the number of targets you may defend with Counterspelling.

Arcane Improviser - 5 Karma (Magic Quality) A character with *Arcane Improviser* may cast 1 Spell each day that they have not learned. When casting a Spell this way it is treated as Reckless Spellcasting. At GM discretion, or if the character rolls a 1 result on 1D6, a different Spell than the chosen one is cast, chosen by the GM.

Astral Chameleon - 9 Karma (Magic Quality) The character's astral signature fades in half the normal time, and all attempts to Assense their aura or signature receive a -2 dice pool modifier. This quality may only be taken by magically active or dual natured characters.

Barehanded Adept - 12 Karma (Adept, Combat, Magic Quality) *Barehanded Adept* allows an Adept character to learn a number of Touch Spells up to their MAG rating / 2. When using these Spells you must successfully touch the target using an Unarmed Attack, and use Unarmed Combat Skill in place of Spellcasting. The maximum Force of these Spells is your MAG rating / 3, and Drain is resisted with BOD + WIL.

Barrens Rat - 4 Karma (Stealth Quality) Receive -1 Concealability modifier for half AGI (rounded up) number of items concealed on your person.

Battle Hardened - 3 Karma per lvl, Max lvl 3 (Combat, Mental Quality) For each level of *Battle Hardened* taken receive a +1 dice pool modifier on Composure Tests taken during a hostile situation.

Better to be Feared than Loved - 5 Karma (Social Quality) Contacts fear what you might do to them; add Street Cred to Contact's Loyalty rating. At GM discretion, if Contacts turn on you, add Street Cred to their Connection rating to determine who they send against you.

Bilingual - 2 Karma (Knowledge Quality) *Bilingual* characters may take a second free native Language Skill at character creation.

Biocompatibility - 8 Karma ('Ware Quality) Choose Bioware or Cyberware; reduce Essence costs of chosen implants by 10%, rounded down to the tenth and cumulative with 'ware grade reductions. Quality can only be taken once. Incompatible with *Sensitive System*.

Black Market Pipeline (Contact, Merchandise) - 10 Karma (Gear, Social Quality) During character creation, choose one contact and a category of gear (e.g.: Fixer, Weapons) to receive a 10% discount on all purchases of that category from that Contact, in addition to a +2 dice pool modifier for any Availability Test the Contact makes to find said purchases. Selling or fencing the chosen type of gear through that Contact also receives 7% x Loyalty value of the item instead of the normal 5%.

Blandness - 7 Karma (Social, Stealth Quality) Bland characters are difficult to pick out in a crowd or remember; any Memory Test to recall the character or tests related to shadowing or locating them have their threshold raised by one. This quality does not affect magical or matrix searches, and is negated when a character acquires any distinguishing characteristic, at GM's discretion.

Blood Magic Resistance - 10 Karma (Defensive, Magic Quality) Any use of blood magic against you receives a -2 dice pool modifier.

Born Rich - 10 Karma (Gear Quality) Receive 2500 nuyen for every 1 Karma spent at character creation instead of normal 2000 nuyen per Karma.

Built Tough - 0 Karma (Giant, Ogre, Ork, Physical, Troll, Satyr Quality) Gain 1 extra Physical Condition Track Box per level of the quality.

Catlike - 8 Karma (Stealth Quality) Receive +1 dice pool modifier on all Stealth Tests.

Closer - 6 Karma (Social Quality) Receive a +2 dice pool modifier for Negotiation Tests when it is a life or death situation, at GM discretion.

Codeslinger - 10 Karma (Matrix Quality) Pick one specific Matrix Action; gain +2 dice pool modifier when taking that action. May only be taken once.

College Education - 4 Karma (Knowledge, Skill Quality) Academic Knowledge Skills taken at character creation cost 1x new rating Karma instead of the normal 2x new rating.

Common Sense - 7 Karma (Meta Quality) Anytime your character would do something foolish they are alerted or warned, at GM discretion.

Community Connection - 0 Karma (Ork, Troll Quality) Only available to Okrs and Trolls. Maintain a Squatter Lifestyle for free, or maintain a Low Lifestyle for half the normal cost.

Cyber Singularity Seeker - 9 Karma (Mental, 'Ware Quality) Seek nirvana through chrome flesh; gain +1 WIL,

up to max +2, for every 2 full cyberlimb replacements.

Daredevil - 8 Karma (Meta Quality) Whenever a character with *Daredevil* performs a particularly daring or dangerous act they receive 1 point of Edge, at GM's discretion.

Data Anomaly - 3 Karma (Matrix Quality) Gain +2 dice pool modifier to resist Matrix Perception Tests when Running Silent, but Sprites automatically succeed at spotting you.

Death Dealer - 5 Karma per lvl, Max lvl 3 (Magic Quality) Only available to Magicians. All Combat Spells you cast deal +1 Damage and generate +1 Drain for every level of this quality taken.

Dedicated Conjurer - 10 Karma (Magic Quality) Only available to Magicians. You forfeit the ability to cast Spells and treat Spellcasting as an untrained Skill. In return, you gain the ability to summon 1 extra spirit type per rating of your Conjuring Skill beyond the normal spirits available to your tradition.

Dedicated Spellslinger - 10 Karma (Knowledge, Magic Quality) Only available to Magicians. You forfeit the ability to summon or bind spirits and treat Conjuring as an untrained Skill. In return, you gain 1 free Spell every time your Spellcasting rating improves; if taken at character creation you gain a number of free Spells equal to your Spellcasting. You also learn new Spells at 4x Spell Value Karma instead of the normal 5x. If combined with *Apt Pupil* these qualities reduce the cost of learning new Spells to 2x Spell Value Karma.

Dermal Deposits - 0 Karma (Troll Quality) Dermal deposits within a Troll's skin grant them 1 natural armor. *Dermal Deposits* are innate to Trolls at character creation.

Double Jointed - 4 Karma (Physical, Stealth Quality) Gain +2 dice pool modifier on all Escape Artist Tests and may fold and contort themselves to fit into smaller than normal spaces.

Drug Tolerant - 6 Karma (Mental, Physical Quality) Ozzy Osborne Syndrome; gain +2 dice pool modifier for all Addiction Tests.

Empathic Listener - 3 Karma (Social Quality) Substitute INT for CHA on all Etiquette Tests.

Erased - 16 Karma (Matrix, Meta, Social Quality) All digital information on your existence, all physical records, have been erased prior to your becoming a shadowrunner.

Exceptional Attribute - 14 Karma (Mental, Meta, Physical Quality) One Attribute has its natural maximum raised by 1.

Fame - 5 to 15 Karma (Meta Quality) Requires the *SINNER* quality. (**Local Fame**) - 5 Karma Public Awareness is increased by 2 and gain +1 dice pool modifier on Social Tests against characters who recognize you. Local

characters recognize you with a LOG + INT (3) Test. If you have the *Day Job* quality your income is multiplied by 3x. **(National Fame)** - 10 Karma Public Awareness is increased by 3 and gain +2 dice pool modifier on Social Tests against characters who recognize you. Local or national characters recognize you with a LOG + INT (2) Test. If you have the *Day Job* quality your income is multiplied by 5x. **(Global Fame)** - 15 Karma Public Awareness is increased by 6 and gain +3 dice pool modifier on Social Tests against all characters who recognize you with a LOG + INT (1) test. If you have the *Day Job* quality your income is multiplied by 10x.

Fangs - 0 Karma (Hobgoblin Quality) Allows Unarmed attack of (STR+1)P Reach -1.

Fashion Influencer - 5 Karma (Social Quality) When purchasing named lines of clothing, such as Armanté or Zoé, receive a 50% discount.

First Impression - 6 Karma (Social Quality) Gain +2 dice pool modifier on all Social Tests during the initial encounter when meeting a new character..

Focused Concentration - 9 Karma per lvl, Max lvl 2 (Magic Quality) Each level of *Focused Concentration* grants a +1 dice pool modifier on Drain Resistance Tests.

Friends in High Places - 10 Karma (Meta, Social Quality) Gain an additional pool of free Karma during character creation equal to 4x CHA which can only be spent on Contacts with a Connection Rating 8 or higher.

Galloping Stride - 0 Karma (Centaur Quality) Innate to the Centaur metatype and represents the fact that they are a quadruped.

Gearhead - 5 or 10 Karma (Rigger Quality) Gain +1 dice pool modifier per level to all tests for repairing or modifying vehicles.

Grease Monkey - 8 Karma (Rigger Quality) Receive +2 dice pool modifier for repairing or modifying vehicles when using the Engineering skill.

Guts - 10 Karma (Mental Quality) Receive +2 dice pool modifier on all tests to resist fear or intimidation.

Hair Trigger - 3 or 5 Karma (Matrix, Rigger Quality) Characters with *Hair Trigger* may enter hot-sim as a Free Action. With a Rigger Control Rig they may jump into a drone or vehicle as a Simple Action, as if they were already in VR. This quality costs 5 Karma for Technomancers.

Hawk Eye - 5 Karma (Combat, Physical Quality) Gain +1 dice pool modifier on all visual Perception Tests and +1 dice pool modifier on ranged attacks beyond Medium Range.

Healer - 10 Karma (Healing, Magic Quality) Only available to Magicians and Mystic Adepts. When using Healing Spells, the penalty from lowered Essence is reduced by

half, round down. Additionally, increase the number of Physical Boxes you heal with each net hit by 1.

High Pain Tolerance - 4 Karma per lvl, Max lvl 4 (Physical Quality) Ignore one box of damage when calculating Wound Modifiers. Not compatible with *Pain Resistance* adept power or pain editor and damage compensator 'ware.

Hi-Rez - 6 Karma (Technomancer Quality) Only available to Technomancers. Your Technomancer bonus for Matrix Perception Tests increases from a +2 to a +4 dice pool modifier. You may also make Matrix Perception Tests as a Free Action.

Home Ground - 10 Karma (Meta Quality) Must be a particular building, small neighborhood, or computer network your character is intimately familiar with. Gain +2 dice pool modifier on all tests associated with, on, or in your *Home Ground* location, at GM's discretion.

Honest Face - 5 Karma (Mental, Social Quality) When a Judge Intentions Test is made against you receive a +2 dice pool modifier on the opposing CHA + WIL Test.

Hooves - 0 Karma (Centaur, Satyr Quality) Innate to the Centaur and Satyr metatypes for their cloven feet and grants unarmed attack of (STR+2)P with Reach +1 for Centaurs, and (STR+1)P for Satyrs.

Human 2.0 - 25 Karma (Meta Quality) Only available to human characters. Not available to awakened characters or Technomancers. Increase metatype maximum for Willpower and Charisma by 1 each.

Human-Looking - 5 Karma (Meta, Physical, Ogre Quality) A metahuman character with *Human-Looking* may pass as a human in most circumstances, avoiding social modifiers at GM discretion.

Impenetrable Logic - 4 Karma (Matrix, Mental Quality) May substitute LOG in place of WIL for Matrix Full Defense Tests.

Inspired - 3 Karma (Meta Quality) Gain +1 dice pool modifier on all Artisan or Performance Tests, player's choice. The character also receives Street Cred 2 with any artists familiar with their work.

Jack of all Trades - 12 Karma (Meta, Skill Quality) All Active Skills cost 3 less Karma to raise their rating than normal, up to rating 5. Past rating 5 they revert to normal Karma costs; e.g.: *Raising Firearms 2 to Firearms 3 would cost 9 Karma normally, but with Jack of all Trades the cost would be reduced to 6 Karma.*

Juryrigger - 10 Karma (Matrix, Meta, Rigger Quality) Gain +2 dice pool modifier when attempting to temporarily repair or jury rig a device from minimal materials, at GM's discretion.

Keen-Eared - 3 Karma (Hobgoblin, Meta, Nocturna Quality) Receive +1 dice pool modifier to all auditory Percep-

tion Tests.

Lightning Reflexes - 15 Karma (Initiative Quality) Gain one additional Initiative Die and two additional Actions. Incompatible with Reaction enhancing 'ware.

Linguist - 6 Karma (Knowledge, Meta, Skill Quality) Characters with *Linguist* learn new Language Skills in half the normal time and pay 1x new rating Karma to learn them. When taken at character creation, this quality provides 5x LOG + INT free Karma to purchase Language Skills. Any unspent Karma is lost.

Logical Debater - 4 Karma (Mental, Social Quality) Use LOG in place of CHA for Social Tests when using facts or logic to get your point across, at GM discretion.

Long Reach - 8 Karma (Combat, Physical Quality) Gain +1 Reach.

Low-Light Vision - 0 Karma (Centaur, Elf, Hobgoblin, Nocturna, Ogre, Ork, Satyr Quality) Characters with *Low-Light Vision* can see in darker lighting conditions naturally; they treat Partial Light and Dim Light as Full Light. Only available to certain metatypes at character creation.

Lucky - 13 Karma (Meta Quality) Raise a character's maximum Edge by 1.

Made Man - 5 Karma (Meta, Social Quality) Characters with this quality are minor members of a crime organization, which they treat as a Group Contact with Connection 8 and Loyalty 3. They are allowed to fence items with the organization for a 20% cut, and purchase items through the organization at a 10% discount and gain +1 dice pool modifier for Availability Tests.

Magic Resistance - 6 Karma per lvl, Max lvl 4 (Defensive, Magic, Meta Quality) For each level of *Magic Resistance*, a character gains +1 dice pool modifier for Spell Resistance Tests. This quality may not be taken by magically active characters and all voluntary spells cast against them, such as healing spells, automatically fail.

Magic Sense - 5 Karma (Magic, Meta Quality) *Magic Sense* allows a character to sense the use of magic in their vicinity, even if they are not magically active themselves. This functions the same as a mage attempting to detect magic, but uses INT + WIL and has a range of 5 meters x MAG, minimum 5 meters.

Massive Networker - 20 Karma (Meta, Social Quality) All Contacts are reduced in cost by 2, to a minimum of 2. This quality may not be combined with the *Networker* quality.

Mentor Spirit - 5 Karma (Magic Quality) Only available to magically active characters. Gain a Mentor Spirit, which can be changed to a different type of spirit by buying the quality off as if it were a Negative Quality, then purchasing *Mentor Spirit* again.

Missile Deflector - 10 Karma (Adept Quality) Requires having both Adept Powers: Missile Parry and Counter-strike. As an Interrupt Action you may immediately throw an object you caught using Missile Parry.

Murky Link - 6 Karma (Defensive, Magic Quality) Gain +2 dice pool modifier to all tests to resist or defend against Ritual Sorcery.

Natural Athlete - 8 Karma (Physical Quality) Receive +2 dice pool modifier to all Athletics and Gymnastics Tests.

Natural Hardening - 10 Karma (Defensive, Matrix Quality) A character with *Natural Hardening* has 1 natural point of Biofeedback Filtering cumulative with all other Biofeedback Filtering.

Natural Immunity - 4 or 8 Karma (Defensive, Physical Quality) At 4 Karma, gain immunity to one natural pathogen or toxin. At 8 Karma, gain immunity to one synthetic pathogen or toxin. Magically active pathogens and toxins may not be chosen. Your character is affected by the pathogen or toxin as per normal if you are exposed to it more than once every 12 - BOD hours, but you gain a +1 dice pool modifier on your Pathogen or Toxin Resistance Test.

Natural Leader - 5 Karma (Combat, Meta, Social Quality) Receive +1 dice pool modifier to all Leadership and Teamwork Tests.

Networked In - 4 Karma (Meta, Social Quality) When you gain a new contact with Connection rating 4 or less, immediately increase that rating by 1.

Networker - 5 Karma (Meta, Social Quality) All Contacts are reduced in cost by 1, to a minimum of 1. This quality may not be combined with the *Massive Networker* quality.

Night Vision - 2 Karma (Nocturna, Physical Quality) *Night Vision* grants the benefits of *Low-Light Vision*, but you suffer the effects of Blinding Glare on a clear day and Moderate Glare on an overcast day unless wearing sunglasses or some form of Flare Compensation. This enhanced vision is not compatible with visual 'ware enhancements or replacements.

Ogre Stomach - 0 Karma (Ogre Quality) Ability to digest almost anything up to raw meat and cellulose-based plant material, including grass. Gain +2 dice pool modifier to all Toxin Resistance Tests to resist ingested toxins. Innate to the Ogre metatype.

One Trick Pony - 5 Karma (Combat Quality) Learn 1 Martial Arts Technique without learning a Martial Arts Style.

Online Fame - 10 Karma (Matrix, Meta, Social Quality) Characters who see your Icon recognize you on a successful INT + LOG (2) Test. If recognized, you gain a +2 dice pool modifier on all Social Tests with them. If this

interaction transfers from online to in the flesh, the character will either believe you or think you are an imposter, at GM discretion. GM is encouraged to roll a 1D6 and on a hit the character believes you are the real you. If they believe you the Social Test modifier increases to a +3; if they believe you are an imposter it becomes a -4 dice pool modifier to all Social Tests.

Outdoorsman - 3 Karma (Meta, Physical Quality) Receive +2 dice pool modifier on Survival and Tracking Tests.

Overclocker - 5 Karma (Matrix Quality) Gain one rating point of your choice in ASDF for your cyberdeck. This bonus rating point can be switched any time the deck is reconfigured.

Pain is Gain - 6 Karma (Defensive, Matrix Quality) On any Combat Turn when you receive Biofeedback Damage, you gain +2 to your Initiative Score for both the remainder of the Combat Round and the following Round.

Pathogen/Toxin Resistance - 4 Karma per lvl, Max lvl 2 (Defensive, Physical Quality) *Pathogen Resistance* grants +1 dice pool modifier to Pathogen Resistance Tests, while *Toxin Resistance* grants +1 dice pool modifier to Toxin Resistance Tests. At level 2 this becomes +2 dice pool modifier and the quality applies to both Pathogen Resistance and Toxin Resistance Tests.

Perceptive - 5 or 10 Karma (Meta, Physical Quality) For 5 Karma, gain +1 dice pool modifier on all Perception Tests, including astral and matrix. For 10 Karma, this increases to +2 dice pool modifier.

Perceptive Defender - 4 Karma (Defensive Quality) Substitute Perception Skill rating for WIL on Full Defense.

Perfect Time - 5 Karma (Meta Quality) Your character knows the current time to the minute unless extenuating circumstances disrupt this ability, at GM's discretion. *Perfect Time* also provides a +1 dice pool modifier to all tests involving timing or rhythm and 1 extra minor action every combat turn.

Photographic Memory - 5 Karma (Mental Quality) Receive +4 dice pool modifier on Memory Tests.

Prime Datahaven Membership - 7 Karma (Matrix, Meta, Social Quality) Pick one of the famous datahavens, such as JackPoint, to be a Group Contact with Connection 5 and Loyalty 3. Continued membership will require sharing info with the datahaven, at GM discretion.

Privileged Family Name - 5 Karma (Meta, Social Quality) Grants +2 dice pool modifier on Social Tests against local sprawl characters and a get out of jail free card against small misdemeanors, at GM's discretion. This quality requires the *SINner National* or *Corporate* quality.

Prototype Transhuman - 15 Karma (Meta, 'Ware Quality) At character creation you receive 1 Essence worth of Bioware without paying Essence costs, but must still

pay nuyen and follow all other rules. Must gain 1 of the following, with no bonus Karma: *Wanted*, *Astral Beacon*, or *Insomnia* (10).

Quick Healer - 4 Karma (Healing Quality) Receive +2 dice pool modifier on all Healing Tests, including magical healing.

Rad-Tolerant - 6 Karma (Defensive, Physical Quality) Double exposure time required before suffering effects for radioactive environments, and treat all such environments as one step less.

Reach (Positive) - 0 Karma (Giant, Elf, Ork, Troll Quality) Characters that have a positive value for *Reach* have longer arms or taller stature than the human baseline and gain an advantage in melee combat over opponents with less reach. Innate to certain metatypes at character creation but may also be gained from various gear, spells, or abilities.

Reputation - 2 or 4 Karma (Meta, Social Quality) For 2 Karma (**Solid**), gain 1 Reputation with a specific group. For 4 Karma (**Legendary**), this becomes 2 Reputation. This quality may only be taken once for a single, specific group.

Restricted Gear - 10 Karma per item (Gear, Meta Quality) This quality may be taken up to three times. At character creation it provides access to one item with an Availability up to 24. During gameplay it allows one item up to Availability 18 with a single commlink call and a 30% markup. *Restricted Gear* may be taken during character creation and saved for use later.

Satyr Legs - 0 Karma (Satyr Quality) Innate to the Satyr metatype. *Satyr Legs* are backward canted, hairy, and cloven.

Scholastic Achievement - 5 Karma (Knowledge Quality) A character with *Scholastic Achievement* may gain Knowledge Skills at character creation by spending 1,000 nuyen per skill rating gained.

School of Hard Knocks - 4 Karma (Knowledge, Skill, Social Quality) Street Knowledge skills taken at character creation cost 1x new rating Karma instead of the normal 2x.

Sense of Direction - 3 Karma (Meta, Physical Quality) A character with *Sense of Direction* always knows how far they have travelled within a few meters as long as they were aware while moving. When combined with the Survival Skill this allows the character to retrace their steps automatically, at GM's discretion.

Sensei - 13 Karma (Skill Quality) Your character chooses a single Active Skill they have dedicated themselves to mastering and acquires a sensei. Training with this sensei reduces the cost of improving this skill to 1x new rating Karma instead of the normal 3x.

Silence is Golden - 9 Karma (Matrix Quality) Characters with *Silence is Golden* reduce Noise by 2 for everyone within 10 meters, including themselves.

Social Chameleon - 7 Karma (Social Quality) Receive +2 dice pool modifier on all Etiquette Tests.

Spacer - 5 Karma (Physical Quality) Receive +1 dice pool modifier for all Physical Tests in low gravity.

Speed Demon - 5 Karma (Rigger Quality) When directly piloting or jacked into a vehicle travelling at Speed 4 or greater, receive a +1 dice pool modifier to all Piloting Tests.

Speed Reader - 2 Karma (Mental Quality) Characters with *Speed Reader* can read a full page of 800 words in 5 seconds, or an 800 page book in 1 hour. When combined with *Photographic Memory* they can instantly recall what they have read, otherwise they retain the high points of the content. If they wish to recall something specific they may do so with a LOG + INT Extended Test with a threshold determined by the GM.

Spike Resistance - 7 Karma per lvl, Max lvl 3 (Defensive, Matrix Quality) Gain +1 dice pool modifier to resist damage from harmful biofeedback per level of *Spike Resistance*.

Spirit/Sprite Affinity - 12 Karma (Magic, Technomancer Quality) Your character has an affinity for a particular type of spirit or sprite. You gain 1 service or 1 task above normal, and a +1 dice pool modifier when binding that type of spirit.

Spirit Champion - 14 Karma (Magic Quality) Summoning Tests you make receive a +1 dice pool modifier for every Force x 5 drams of reagents spent. Binding Tests require only Force x 20 drams of reagents and receive a +1 dice pool modifier.

Spiritual Lodge - 5 Karma (Magic, Meta Quality) Only available to Magicians and Mystic Adepts. Character can create a Magical Lodge anywhere via meditation, raising the Force of the Lodge by 1 for every hour spent meditating. Area of the Lodge is a radius of Force in meters and creation requires no materials or reagents. Multiple characters with this quality may combine their efforts to create a larger and higher Force Lodge faster, increasing Force by 1 for every character helping per hour of meditation. The Lodge lasts until the next sunrise or sunset.

Steely Eyed Wheelman - 2 Karma (Rigger Quality) Terrain modifiers are reduced by 1 to a minimum 0 when making Vehicle Tests.

Stolen Gear - 1 to 30 Karma (Gear, Meta Quality) Every point of Karma spent on *Stolen Gear* grants 10,000 nuyen for the purchase of 1 specific item at character creation. This increases to 2 items at 10-19 Karma, and 3 items at 20-30 Karma. Whoever the gear was stolen from will attempt to get it back, starting with at least placing a

25,000 nuyen bounty on your head. If the stolen items are returned or taken from you the bounty is lifted at GM discretion. Otherwise the Karma cost of this quality may be paid off, in part or in full, to represent failing interest in regaining the items as time goes on, until it has been entirely bought off and the bounty is lifted.

Stunt Driver - 12 Karma (Rigger Quality) Receive +2 dice pool modifier when performing any Stunt Test in a vehicle.

Technical School Education - 4 Karma (Knowledge, Skill Quality) Professional Knowledge Skills taken at character creation cost 1x new rating Karma instead of the normal 2x.

Thermographic Vision - 0 Karma (Dwarf, Gnome, Troll Quality) Characters with *Thermographic Vision* can see into the infrared range, essentially giving them heat vision. Innate to certain metatypes at character creation. Downgrade all Visibility and Light modifiers by 1 step.

Too Pretty to Hit - 3 Karma (Defensive Quality) Substitute CHA for WIL on Full Defense.

Tough as Nails - 4 Karma per lvl, Max lvl 4 (Defensive, Physical Quality) A character with *Tough as Nails* gains 1 Stun Condition Track Box per level of the quality.

Toughness - 7 Karma (Defensive, Physical Quality) Gain +1 dice pool modifier on Damage Resistance Tests.

Trust Fund - 5, 10, or 15 Karma (Meta Quality) At 5 Karma *Trust Fund* provides a permanent Low Lifestyle and 500 nuyen spending money every month. At 10 Karma this increases to Middle Lifestyle and 1000 nuyen. At 15 Karma it becomes High Lifestyle and 2000 nuyen. Taking this quality requires the *SINner* quality, and breaking the law may result in the trust being revoked, at GM's discretion.

Trustworthy - 12 Karma (Social Quality) Receive +2 dice pool modifier on all Social Tests involving Con, Influence, or Leadership.

Type O System - 30 Karma ('Ware Quality) All regular bioware is treated as Delta-grade 'ware for you; half Essence costs on all bioware.

Vehicle Empathy - 5 Karma (Rigger Quality) When manually driving or jacked into (but not jumped in), receive +1 dice pool modifier on Piloting Tests and increase Handling Rating by 1.

Voice of Experience - 5 Karma (Meta Quality) Gain +2 dice pool modifier on all Instruction and Leadership Tests.

Watch the Suit - 3 Karma (Social Quality) Stun Damage never mars your physical appearance. After a combat encounter in which you did not take Physical Damage, your appearance will not arouse suspicion that you were involved, and you do not receive any penalties for looking

out of place on Etiquette Tests. Physical Damage will still cause bruises, draw blood, tear clothing, etc.

Water Sprite - 6 Karma (Physical Quality) All Athletics Tests in water receive a +2 dice pool modifier.

Will to Live - 3 Karma per lvl, Max lvl 4 (Healing, Physical Quality) Each level of *Will to Live* gives 1 extra Damage Overflow Box.

Witness My Hate - 8 Karma (Combat, Magic Quality) Mage or Mystic Adept quality only. Gain 2 Damage and 2 Drain on all Direct Combat Spells.

Negative Qualities: Delusion - 5 Karma per Level (Max 4)

The character believes something fundamentally untrue, acting upon this belief even when faced with contradictory evidence.

Personafix - 10 Karma

The character's personality is actually a highly sophisticated BTL program or artificial construct. They suffer a -2 penalty to social tests when their pre-programmed responses do not fit the situation.

Remembrance - 5 Karma

The character is haunted by memories of someone else or a past life, suffering distractions in combat or social situations when triggered by specific stimuli (-2 dice pool penalty).

Trouble Magnet - 10 Karma

The character has incredibly bad luck. The GM may spend a point of GM Edge to force a glitch or create an unfortunate encounter for the character once per session.

Accident Prone - 4 Karma Receive a -2 dice pool modifier when piloting any vehicle.

Addiction (Substance, Severity) - 3 to 15 Karma The *Addiction* quality must be chosen with a specific substance and the severity of the addiction. Severity determines how often the character experiences cravings

and makes a Withdrawal Test. Failure on the Withdrawal Test results in penalties, unless the addiction is satisfied..

(Mild) - 3 Karma Characters with a *Mild Addiction* experience cravings every 2 weeks. Failure to resist or satisfy their addiction results in a -1 dice pool modifier to all tests until they get their fix or succeed on a future Withdrawal Test, which may be taken every 1 hour after the initial test.

(Moderate) - 6 Karma Characters with a *Moderate Addiction* experience cravings every few days. Failure to resist or satisfy their addiction results in a -2 dice pool modifier to all tests until they get their fix or succeed on a future Withdrawal Test, which may be taken every 2 hours after the initial test.

(Severe) - 10 Karma Characters with a *Severe Addiction* experience cravings every day. Failure to resist or satisfy their addiction results in a -3 dice pool modifier to all tests until they get their fix or succeed on a future Withdrawal Test, which may be taken every 6 hours after the initial test.

(Burnout) - 15 Karma Characters with a *Burnout Addiction* experience cravings every few hours. Failure to resist or satisfy their addiction results in a -4 dice pool modifier to all tests until they get their fix or succeed on a future Withdrawal Test, which may be taken every 24 hours after the initial test.

AIPS - 10 Karma Artificially Induced Psychotropic Schizophrenia; receive -1 dice pool modifier per level of Noise Rating on Perception Tests. At GM discretion excessive Noise may inflict modifiers on other Tests.

Albinism - 4 Karma Albino characters sunburn in half the normal time of direct unprotected sunlight and suffer Weak Glare while indoors or in overcast weather. While in clear weather they suffer Moderate Glare. These penalties may be circumvented with proper UV protection or Flare Compensation. Any albino character who acquires cybereyes must pay off the *Albinism* quality before doing so, and if cybereyes are taken during character creation the quality gives no bonus Karma..

Allergy (Substance, Severity) - 4 to 24 Karma The *Allergy* quality must be chosen with a specific substance and the severity of the allergy. Different amounts of Karma are awarded for both how severe the allergy is and how common the allergen is.

Allergen	Karma
Common	2
Seasonal	3
Uncommon	5
Rare	9

(Mild) - 2 Karma Characters experience discomfort and receive a -1 dice pool modifier to all Physical Tests.

(Moderate) - 3 Karma Characters experience pain and receive a -2 dice pool modifier to all Physical Tests. **(Se-**

vere) - 6 Karma Characters experience extreme pain and receive a -3 dice pool modifier to all tests. **(Extreme)** - 15 Karma Characters experience anaphylactic shock and receive a -4 dice pool modifier to all tests and 1 damage

on their Physical Condition Track for every 1 minute they are exposed to the allergen.

Always Late - 2 Karma (Social Quality) You are always 15 minutes late to any appointment or meeting, and your entire team suffers a -1 dice pool modifier on Social Tests as a result of your unprofessional behavior.

Asthma - 6 Karma *Asthma* is treated as having the *Allergy (Common, Mild)* quality with multiple common allergens, such as dust or pollen, and halves the time between Fatigue Tests.

Astral Beacon - 9 Karma The character's astral signature lasts twice the normal time, and all attempts to Assense their aura or signature receive a +2 dice pool modifier. This quality may only be taken by magically active or dual natured characters.

Augmentation Addict - 18 Karma Character must pass a Composure (4) Test when encountering newer, better, or shinier 'ware than what they currently possess, at GM discretion. Failure on this test results in being compelled to acquire this 'ware or a similar item. At GM discretion any character who loses more than 2 Essence from implants gains this quality.

Bad Credit - 10 Karma Treat all Lifestyle costs as 10% higher than normal and all gear as 1 Availability higher.

Bad Luck - 13 Karma At GM's discretion, a character with *Bad Luck* must roll 1D6 when utilizing their Edge. On a result of 1 their Edge causes the exact opposite of what they wanted; a glitch is turned into a critical glitch instead of being negated, they move last for initiative instead of going first, etc.

Bad Memories - 4 Karma (Mental, Meta Quality) When taking *Bad Memories* choose a difficult subject or event from your past. Receive a -1 dice pool modifier on all tests when in the presence of the chosen memory or anything sufficiently related to it, at GM discretion.

Bad Rep - 7 Karma Begin play with 3 points of Notoriety, which may only be bought off after the character has confronted and dealt with the source of their reputation.

Basement Dweller - 6 Karma Receive -2 dice pool modifier on all Social Tests during your first encounter with another character.

Big Baby - 4 Karma Characters with *Big Baby* suffer a -1 dice pool modifier to all Combat Actions after they have taken Physical Damage, until the source of their damage has been incapacitated or killed.

Big Regret - 5 Karma Any Social Tests incur a -3 dice pool modifier if the opponent knows your past. This quality may be transmuted to a gain of 1 Notoriety if enough characters learn your past.

Big & Tall - 6 Karma per lvl, Max lvl 3 Certain metatypes require everything in their lives to be abnormally large in

order to fit their frames. Innate to Trolls at lvl 1, Giants at lvl 2, and Centaurs at lvl 3.

Biosystem Overstress - 10 Karma Time required between Healing Tests and Fatigue Recovery Tests doubled. Must have at least 2 Essence worth of Bioware to take this quality. At GM discretion any character who loses more than 3 Essence from implants gains this quality.

Bi-Polar - 8 Karma Medication for a *Bi-Polar* character requires a valid prescription, a SIN (or a good fake), and 500 nuyen per month. While unmedicated, the character may suffer manic or depressive states. Every day the GM rolls 1D6; on a result of 1-2 the character is in a manic state and has a +1 dice pool modifier to linked Agility or Reaction Tests, and a -2 dice pool modifier to linked Logic and Intuition Tests. On a result of 3-4 the character is stable with no modifiers. On a result of 5-6 they are in a depressive state and have a -2 dice pool modifier to all tests linked with Agility, Reaction, Logic, or Intuition. Medication may be found on the street for 100 nuyen per daily dose.

Blighted - 5 Karma per lvl, Max lvl 3 Character has been negatively affected by radiation, pollution, toxic waste, etc. Each level grants 5 bonus Karma. At the beginning of each shadowrun you must pass an Edge (3) Test or else the effects of *Blighted* manifest. At level 1, receive -1 dice pool modifier to all Physical Tests. At level 2, receive -1 dice pool modifier to all Tests. At level 3, receive -2 dice pool modifier to all Physical Tests and -1 dice pool modifier to all other Tests.

Blind - 5 or 15 Karma This quality grants 15 bonus Karma normally, but only 5 if character is capable of Astral Sight. Automatically fail all visual Perception Tests. Receive -4 dice pool modifier for general Perception Tests and -3 dice pool modifier for Surprise Tests. Quality must be bought off if repairing or restoring vision with 'ware, unless the quality was bestowed by GM from injury during play. If repaired or replaced in character creation, no bonus Karma awarded.

Codeblock - 10 Karma Characters with *Codeblock* receive a -2 dice pool modifier to a chosen type of Matrix action. GM discretion on who can take this quality.

Code of Honor - 18 Karma Choose a group of people, e.g.: women and children, that you will not harm no matter the circumstances. Any time anyone attempts to hurt this group, your character must pass a CHA + WIL (4) test or be compelled to stop whoever is attempting to harm the chosen group. Your character will always attempt non-violent ways of dealing with said group. Whenever non-violent means are attempted, the GM secretly rolls 1D6; a result of 1 causes complications that injure or kill the targeted character. Whenever a witness to a shadowrun from the chosen group is allowed to leave, and they are in a position where they could recognize or remember your character, your Public Awareness increases by 1.

For every member of the chosen group killed during a shadowrun, whether intentionally or accidentally, lose 1 Karma.

Combat Paralysis - 18 Karma A character with *Combat Paralysis* divides their Initiative Score in half on the first round of a combat encounter and they cannot take a Move or Sprint Action during the first round. Additionally, the character receives a -3 dice pool modifier for Surprise Tests and their threshold for Composure Tests while in combat is increased by 1.

Compulsive Behavior - 2 Karma per lvl, Max lvl 6 (Meta, Mental, Social Quality) Your character chooses a compulsive activity that they must participate in for 1 hour per day per level of *Compulsive Behavior* taken. If you fail to do so you receive a -2 dice pool modifier on all Tests until you complete a full day's requirement.

Computer Illiterate - 16 Karma Characters with *Computer Illiterate* receive a -4 dice pool modifier at all at-

tempts to use electronic devices. At GM discretion a Success Test may be required to take actions with an electronic device that others take for granted.

Cyberpsychosis - 20 Karma Characters with *Cyberpsychosis* receive a -3 dice pool modifier on all Social Tests. A glitch during Social Tests results in an inappropriate or violent over reaction, at GM discretion. Critical glitches during Social Tests result in a psychotic break. Must have at least 5 Essence worth of implants to take this quality. At GM discretion any character who loses more than 5 Essence from implants gains this quality.

Cyber Snob - 12 Karma Character may never have augmentations below betaware-grade. Must have 1 Essence worth of betaware to take this quality.

Day Job - 5 to 15 Karma You have a real job, which requires a certain number of hours per week of work and provides a monthly paycheck. Must have a *SIN*ner quality to take *Day Job*.

Karma	Salary	Hours per Week
5	1000	10
10	2500	20
15	5000	40

Dead Emotion - 3 Karma Lack of one type of emotion, such as happiness, sadness, anger, or fear, from BTL abuse.

Deaf - 15 Karma Automatically fail all auditory Perception Tests. Receive -2 dice pool modifier on general Perception Tests and -2 dice pool modifier on Surprise Tests. Quality must be bought off if repairing or restoring hearing with 'ware, unless the quality was bestowed by GM from injury during play. If repaired or replaced in character creation, no bonus Karma awarded.

Deformed - 9 Karma Receive +2 dice pool modifier on all Intimidation Tests and -3 dice pool modifier on all other Social Tests.

Dependents - 3 to 15 Karma Character has one or more other characters dependent upon them for varying levels of support. This can result in required time spent with the dependents every week or monetary support. Each level of *Dependents* has guidelines for their requirements, but specifics are at GM discretion. **(Non-Committed)** - 3 Karma A boyfriend, girlfriend, or a sibling that does not live with you. This level of *Dependents* requires at least a few hours a week or 500 nuyen a month to cover their requirements. **(Part Time)** - 7 Karma A sick relative, a live in boyfriend or girlfriend, or a child you have shared custody over. You must spend at least a few days a week or 1500 nuyen a month to take care of their needs. **(Full Time)** - 15 Karma A husband or wife, a life partner, a child completely dependent upon you. *Full Time Dependents*

require most days of the week or 5000 nuyen a month in support.

Designated Omega - 5 Karma At GM discretion, if your character is in a position where the rest of the shadowrunner team is relying upon you to pass or succeed on a Test, you suffer a -1 dice pool modifier from the stress.

Discombobulated - 16 Karma Receive a -2 dice pool modifier to all Tests when outside of AR or VR.

Disgraced - 5 Karma Receive a -2 dice pool modifier on any Etiquette Test against non-criminals and a +2 dice pool modifier on any Intimidation Test against criminals.

Disheveled - 5 Karma You never receive positive Social modifiers from worn clothing.

Distinctive Style - 6 Karma A character with *Distinctive Style* has a physical modification, trait, gear, speech pattern, or fashion style that makes them stand out. All attempts to identify, trace, or locate them receive a +3 dice pool modifier. This quality may only be taken once and is incompatible with the *Blandness* quality.

Down the Rabbit Hole - 2 Karma per lvl, Max lvl 4 For each level of *Down the Rabbit Hole* taken, reduce by 1 the number of 1 results required to roll a Glitch when performing a Matrix Search. At GM discretion a Glitch on a Matrix Search results in you becoming lost and side-tracked, wasting valuable time looking up other interests instead of the target of your search.

Elevated Stress - 6 Karma Receive a -1 dice pool modifier to all Social Tests and Addiction Tests unless something recently has calmed you down, at GM discretion.

Elf Poser - 6 Karma At GM discretion, receive negative Social modifiers when interacting with Elves that know you are a poser.

Emotional Attachment - 5 Karma You are emotionally attached to a specific gear item and will go out of your way to retrieve it if lost, even to the point of risking your lives or the lives of your teammates. You always use this item even if a better option is available. If the item is ever lost or destroyed, you must buy off this quality or suffer a -1 dice pool modifier to all Tests that would have used that piece of gear for the next 6 months, after which the quality transfers to a new piece of gear.

Faceless - 10 Karma Unless you are wearing a disguise, suffer a -2 dice pool modifier on all Social Tests. No penalty when dealing with close friends and associates, at GM discretion.

Family Curse - 8 Karma Receive -2 dice pool modifier on all Addiction Tests.

Faraday Himself - 8 Karma per lvl, Max lvl 3 For each level of *Faraday Himself* taken, you generate +1 Noise for everyone within 10 meters, including yourself. This quality may only be taken by hacker or Technomancer characters, at GM discretion.

Firearm Diplomacy - 3 Karma (Social Quality) At GM discretion, may only be taken by a character that makes heavy use of firearms. When you become involved in a heated argument, you must pass a Composure (2) Test or else you draw or brandish a firearm in an aggressive manner, regardless of the consequences.

Flashbacks - 7 or 15 Karma Character is affected by various triggers that cause flashbacks. Work out with your GM why the flashbacks occur and what can cause them. When exposed to a trigger, make a Composure (5) Test or be incapacitated for 1D6 combat turns. Less common triggers will award 7 bonus Karma, while more common triggers award 15 Karma.

Force of Chaos - 4 Karma Any bonus you would receive from employing group Tactics & Maneuvers is cut in half, rounded up.

Frostbite - 6 Karma Whenever you encounter Black IC you receive a -2 dice pool modifier on a chosen Skill: Cybercombat, Electronics, Hacking, Hardware, or Software. This quality only available to hacker or Technomancer characters, at GM discretion.

Gremlins - 4 Karma per lvl, Max lvl 4 For each level of *Gremlins* you require 1 less roll result of 1 in order to glitch when using electronic devices, e.g.: rolling eight dice would normally require 4 1's to glitch, but with *Gremlins* (2) a glitch happens with 2 1's rolled. This quality

does not affect the normal operation of your cyberware implants.

Illiterate - 12 Karma *Illiterate* characters suffer a -4 dice pool modifier when using electronic devices that require reading. At GM discretion they may be required to make a Success Test on actions others would take for granted. During character creation *Illiterate* characters may not choose any Knowledge Skills that would require reading to learn or be proficient.

Implant-induced Immune Deficiency - 6 Karma Receive -2 dice pool modifier to all Tests to resist disease, toxins, poisons, drugs, and other compounds; this includes Addiction Tests. Must have 2 Essence worth of implants to take this quality. At GM discretion any character who loses more than 4 Essence from implants gains this quality.

Incompetent - 5 Karma You are incompetent at an Active Skill. Treat that skill as Unaware and you may not Default on it. You may never learn the chosen skill or raise its rating. GM discretion applies to what skills this quality may be applied to, depending on the character's build.

In Debt - 1 Karma per lvl, Max lvl 30 For every level of *In Debt* taken you are 5,000 nuyen in debt. Every month the debt increases by 10%, and you owe at least this increase as a monthly interest payment. At GM discretion consequences arise if you miss this monthly payment, such as a squad of mafia goons threatening to break your legs or something else deemed appropriate by the GM. This quality is bought off by fully repaying the debt.

Infirm - 20 Karma A character with *Infirm* treats all Physical Skills they do not possess a rating in as Unaware and may not Default with Physical Skills. Additionally, all Physical Skills double their Karma cost to upgrade their rating.

Insomnia - 9 or 18 Karma Whenever a character with *Insomnia* attempts to heal Stun damage, they must first succeed with an INT + WIL (4) Test. If they fail, their time required to heal Stun damage is doubled until they pass the test, which can be attempted each subsequent time they would heal Stun damage. When taken at the 18 Karma level a failure on the INT + WIL (4) Test doubles healing time and fails to heal any boxes of Stun damage for that attempt.

Lightweight - 6 Karma All drugs are treated as 2 steps higher on their Addiction Rating. You require half as much alcohol to become intoxicated.

Loss of Confidence - 10 Karma When a character suffers a rather embarrassing glitch their GM may award them the *Loss of Confidence* quality. This quality is chosen for the Active Skill the character failed, and they suffer a -2 dice pool modifier when utilizing that skill. Additionally, they may not use Edge with tests involving that skill. This quality can either be bought off as normal, or re-

moved by the GM when the character has a spectacular success using the chosen skill. Not available at character creation.

Low Pain Tolerance - 9 Karma Wound modifiers occur every 2 boxes of damage rather than every 3 for both Physical and Stun Tracks.

Malware Infection - 6 Karma Receive a -2 dice pool modifier on all Matrix Perception Tests.

Matrix Troll - 7 Karma At GM discretion a character with *Matrix Troll* may be compelled to troll or prank on the Matrix at any opportunity, even if it would be to the detriment of the team.

Motion Sickness - 4 Karma When travelling in a vehicle at Speed 4 or greater, or in a vehicle Accelerating at 3 or greater, you experience Nausea until the vehicle slows down, after which the Nausea dissipates after 12 - BOD minutes.

Nano Intolerance - 5 Karma A character with *Nano Intolerance* rapidly breaks down Nanoware faster than normal; Nanoware loses 1 rating point every 4 days instead of every 1 week.

Neoteny - 12 Karma Character has halted physical development and retains physical characteristics of a child or adolescent. Social Test modifiers apply at GM discretion and Physical Condition Track calculated with $6 + (\text{BOD} / 2 \text{ round up})$.

Night Blindness - 6 Karma A character with *Night Blindness* treats Partial Light as Dim Light, and Dim Light as Total Darkness. This quality is incompatible with other vision qualities and must be bought off before obtaining cybereyes or other 'ware vision enhancements. If taken during character creation you receive no bonus Karma if you have cybereyes or other 'ware for vision enhancement.

Nocturnal - 10 Karma *Nocturnal* characters diminish all Mental Attributes by 1 during daylight hours. This quality is innate to the Nocturna metatype.

No Man Left Behind - 10 Karma Any time a teammate is incapacitated in a combat encounter make a Composure (4) Test. If you fail, you are compelled to save them by any means necessary, including self sacrifice. Failing the Composure Test and failing to save your teammate results in an immediate loss of 5 Karma.

Oblivious - 5 Karma per lvl, Max lvl 3 Each level of *Oblivious* gives a -1 dice pool modifier to all Perception Tests.

Ork Poser - 6 Karma At GM discretion receive negative Social modifiers when interacting with Orks that know you are a poser.

Pacifist - 10 or 15 Karma (Meta Quality) At the 10 Karma level, this quality prevents a character from committing violence against another unless in self defense. At the

15 Karma level they may never enact violence against another, even non-violent means. The 10 Karma level requires passing a Composure (4) Test in order to intentionally harm another character, unless acting in self defense. The 15 Karma level requires passing a Composure (5) Test in order to intentionally harm another character, and a Composure (6) Test to intentionally kill. If a character at either level of *Pacifist* kills, or if a character at the 15 Karma level injures anyone, even by accident, they suffer a -1 dice pool modifier to all tests until they pass a CHA + WIL (20, 1 day) Extended Test. If a *Pacifist* character kills anyone they immediately lose 1 Karma.

Paranoia - 6 Karma Receive a -2 dice pool modifier on all Social Tests with Contacts lower than Loyalty 4 or with anyone unfamiliar.

Paraplegic - 10 Karma *Paraplegic* characters must buy off this quality before fixing their paralysis with 'ware. Receive no bonus Karma if taken during character creation and paralysis is fixed with 'ware. While paralyzed they have a 10% increase in Lifestyle costs. If the GM awards this quality during gameplay from damage or injury it does not require buying off the Karma to repair.

Permafried - 10 Karma Permanently on uppers and downers, either generics or a specific drug. At GM discretion you receive a -2 dice pool modifier to Social Tests for the wrong mood. If up, +1 REA and -1 LOG. If down, -1 REA and +1 LOG. GM may determine what mood you are in at any time. Actively switching moods requires 30 minutes of time.

Phobia (Phobia, Severity) - 5 to 15 Karma Phobias grant 2 bonus Karma if they are uncommon, such as the smell of a rose or a black butterfly, and 5 bonus Karma if they are common, such as trolls, magic, insects in general, sunlight, or crowds. **(Mild)** - 3 Karma Receive -1 dice pool modifier in presence of *Phobia*. **(Moderate)** - 5 Karma Receive -3 dice pool modifier and pass Composure (2) Test to remain in presence of *Phobia*. **(Severe)** - 10 Karma Receive -6 dice pool modifier and pass Composure (5) Test to remain in presence of *Phobia*.

Poor Self Control - 4 to 12 Karma Incompatible with the *Common Sense* quality. Each type of *Poor Self Control* may be taken once. **(Alpha Junkie)** - 5 Karma After another PC or NPC in your group succeeds on a Leadership Test, or if you feel as if they are taking charge or issuing commands, or at GM discretion, you must make a CHA + WIL (3) Test. Failure results in you being compelled to make your own Leadership Test or Intimidation Test to regain command, or as a final option outright attack the perpetrator. **(Attention-Seeker)** - 4 Karma Succeed on a Composure (3) Test or character seeks to be the center of attention whenever possible. **(Braggart)** - 4 Karma Unless a character with *Braggart* can pass a Composure (3) Test, they are compelled to one up or top anyone else even if it requires lying. **(Combat Monster)** - 12 Karma

Character may not disengage from a fight until all opponents are killed or disabled, even if outnumbered or losing, unless they pass a Composure (3) Test. Incompatible with the *Combat Paralysis* quality. **(Compulsive)** - 4 Karma A type of obsessive compulsive behavior is chosen which your character must engage in at GM discretion unless you pass a Composure (2) Test. **(Sadistic)** - 8 Karma At GM discretion you must pass a Composure (3) Test or attempt to inflict pain whenever you have the chance to do so with no repercussions. **(Thrill-Seeker)** - 8 Karma You must jump into risky or dangerous situations unless you pass a Composure (2) Test.. **(Vindictive)** - 5 Karma The character must return every slight or injury, no matter how small, with the same or greater in return. Resisting the urge for instant payback requires a successful Composure (2) Test.

Prejudiced (Severity, Group) - 3 to 10 Karma Receive a -2 dice pool modifier for Social Tests when interacting with a member of the prejudiced group for each level of the quality; **(Biased)**, **(Outspoken)**, and **(Radical)**, which award 0, 2, and 5 Karma respectively. *Prejudiced* is taken against a common group, such as humans or a species of metahuman, for 3 Karma, or against a specific group, such as the awakened or technomancers, for 5 Karma. E.g.: a character that is Radical against Humans would receive a -6 dice pool modifier for all Social Tests involving humans, and be awarded 10 bonus Karma.

Quadriplegic - 25 Karma *Quadriplegic* characters must buy off this quality before fixing their paralysis with 'ware. Receive no bonus Karma if taken during character creation and paralysis is fixed with 'ware. *Quadriplegic* characters treat all Physical Attributes aside from BOD as having a rating of 0. While paralyzed they have a 30% increase in Lifestyle costs. If the GM awards this quality during gameplay from damage or injury it does not require buying off the Karma to repair.

Reach (Negative) - 5 Karma per lvl, Max lvl 2 Characters that have a negative value for *Reach* have shorter arms or stature than the human baseline and are at a disadvantage in melee combat. This quality is only available to certain metavariants at character creation but may also be gained from various gear or spells. *Reach* has a karma value of 5 per penalty of reach.

Records on File - 1 Karma per lvl, Max lvl 10 Each level of *Records on File* represents a different big 10 megacorp having all of your biometric, personal, and medical data on file. The chosen megacorps receive a +2 dice pool modifier on all tests to identify or locate you. Incompatible with the *Erased* quality.

Reduced (Sense) - 2 to 29 Karma Any Test involving the chosen sense receives a -2 dice pool modifier. Smell or Taste grant 2 bonus Karma. Hearing, Sight, or Astral Sight grant 5 bonus Karma. Touch grants 10 bonus Karma and the -2 dice pool modifier applies to all Physical

Skill Tests. Multiple reduced senses can be taken with cumulative penalties to general Perception Tests. Quality must be bought off before repairing or correcting the affected sense. *Reduced (Sight)* is incompatible with *Blind*, and *Reduced (Hearing)* is incompatible with *Deaf*.

Scorched - 10 Karma Quality must be taken for Black IC, Psychotropic IC, or BTLs and a physical side effect must be chosen. Whenever the character enters VR or slots a BTL they must make a BOD + WIL (4) Test. Failure results in suffering the effects of the chosen side effect for the next 6 hours. On a glitch or critical glitch this becomes 24 hours. Physical side effects can be short or long term memory loss, memory blackouts, migraines, or paranoia. This quality may only be chosen by decker or technomancer characters at GM discretion.

Sensitive Neural Structure - 5 or 10 Karma Whenever a character with *Sensitive Neural Structure* would take damage from simsense, such as Black IC, BTLs, or Dumpshock, they receive a -2 dice pool modifier to their Damage Resistance Test. For deckers or technomancers this quality is worth 10 bonus Karma instead of 5.

Sensitive System - 15 Karma All cyberware, but no bioware, doubles in Essence cost.

Sensory Overload Syndrome - 15 Karma Every time a character enters an area with highly active AR icons and messages, such as a shopping mall or a spam zone, they must pass a WIL + EDG (4) Test or enter a seizure for (5 - hits) minutes.

Signature - 10 Karma You leave a calling card on shadowruns. Any tests made to identify, locate, or track you gain a dice pool modifier equal to your combined Street Cred and Public Awareness.

Simsense Vertigo - 5 or 10 Karma Any actions taken in AR, VR, or any kind of simsense have a -2 dice pool modifier. For deckers or technomancers this quality is worth 10 bonus Karma instead of 5.

SINner - 5 or 10 Karma **(SIN)** - 5 Karma Functions as a normal SIN for your nation or megacorp of origin. You must pay 15% of your declared income in taxes and you receive 4x as much targeted spam as normal. At GM discretion your biometric data and history will be shared with law enforcement, or sold to megacorps. **(Criminal SIN)** - 10 Karma You are shunned by law abiding members of society and required to broadcast your SIN at all times. At GM discretion you are hauled in for questioning at random times or automatically a suspect for local crimes, as well as routine checkups and inspections.

Social Appearance Anxiety - 3 Karma If you are not perfectly groomed and clothed, wearing out of fashion items, ruffled up from Stun Damage, etc. then you receive a -1 dice pool modifier on all Social Tests, at GM discretion.

Social Stress - 8 Karma Work out with GM a cause for

Social Stress. When triggered you suffer a -2 dice pool modifier to Social Tests, and glitch with 1 less 1 result than normal.

Spirit Bane - 9 Karma A chosen spirit type will always target you before others, and will always use lethal force. Receive a -2 dice pool modifier when attempting to Summon or Banish the chosen spirit type. Watchers and Minions do not count, and this quality may only be taken by awakened characters.

Spirit Pariah - 14 Karma Summoning spirits requires Force x 5 drams of reagents or the Summoning Test automatically fails. Binding spirits requires Force x 30 drams of reagents and you receive a -1 dice pool modifier on all Binding Tests.

Sucker - 4 Karma Receive a -2 dice pool modifier on all Con Tests made against you.

Thousand Yard Stare - 3 Karma per lvl, Max lvl 3 For each level of *Thousand Yard Stare* taken receive a -1 dice pool modifier to all Social Tests with or against non-military characters, at GM discretion. **Trog Traitor** - 5 Karma When in an Ork or Troll majority neighborhoods, your Notoriety is treated as if it were 5 higher.

Ugly - 10 Karma Reduce starting and maximum CHA by 1 during character creation.

Uncouth - 16 Karma Receive a -2 dice pool modifier on all Social Tests. Treat all Social Skills you have no rating in as Unaware and may not Default. Double Karma cost of improving all Social Skills. At GM discretion Success Tests required for social interactions that others would take for granted.

Uneducated - 8 Karma Treat all Technical Skills, Academic Knowledge Skills, and Professional Knowledge Skills as Unaware and may not Default. Double Karma cost of improving these skills. At GM discretion Success Tests required for actions that others would take for granted.

Unsteady Hands - 10 Karma Receive -2 dice pool modifier for all Agility linked Tests.

Vendetta - 9 Karma Choose an individual or group to be your nemesis. Any encounter with them requires immediate, violent confrontation, unless you pass a Composure (3) Test.

Wanted - 12 Karma There is a bounty of at least 25,000 nuyen on your character's head. This results in encounters with bounty hunters and other complications, at GM discretion. If actions are taken to remove the bounty, the Karma cost to buy off the quality must still be paid.

Weak Immune System - 8 Karma Receive -2 dice pool modifier for all Disease Resistance Tests. Incompatible with *Natural Immunity* and *Resistance to Pathogens*.

Combat:

Combat Basics:

All combat in Shadowrun occurs within 3 second intervals referred to as a **Combat Round**. During each round all characters declare their Actions in an order determined by their Initiative Score. Once all characters have declared their Actions, the GM determines the outcomes, again in an order determined by Initiative Score, and whether or not the encounter is over, then a new Combat Round may begin.

Most combat is centered around an area or location, or a group of characters, with the immediate vicinity covering Close Range and referred to as the **Focal Point** of the encounter. Characters and objects outside of this area are referred to in relation to their **Range Bracket**, or distance from the Focal Point. At GM discretion the Focal Point may move as an encounter develops, or even be done away with entirely, dependent on the positioning and actions of the players.

Initiative:

Every character rolls their **Initiative Dice** at the beginning of an encounter, adding the results to their Initiative Attribute, e.g.; *A character with a Reaction Attribute of 5 and an Intuition Attribute of 5 has 1 Initiative Die. They roll a 3 with their single die, which results in a total of 13.* This is their **Initiative Score** for the encounter and is compared to all other characters to determine **Turn Order** during a Combat Round, from highest to lowest Initiative Score. By default, all characters have 1 base Initiative Die, e.g.; *A new character has REA 4 and INT 3 along with their 1 Init Die, their Initiative is written as "7 + 1D6".* NPC Initiative Scores are provided from their statblocks or determined by the GM and require no rolling. Different encounter types, such as Astral or Matrix, function similarly for Initiative and are covered in their section of the rules. Initiative Scores do not change from round to round, unless damage or other effects influence them. If any wounds or other modifiers affect a character their new Initiative Score will be updated at the beginning of the following Combat Round. Characters roll a new Initiative Score when a different encounter begins, or if the GM determines that there was enough of a lull in a significantly prolonged encounter to require it. If new characters arrive during an encounter, or if previously hidden or unknown characters are revealed, the GM inserts their Initiative Scores into the existing Turn Order. If Initiative Scores between any characters are ever tied, the tie breaker is determined by ERIC (Edge, Reaction, Initiative, Coin flip). The character with a higher Edge rating wins the tie; if still tied they move on to comparing Reaction, then comparing Initiative, and finally to a coin flip with the GM assigning one character to be heads and the other tails.

Actions:

During your **Turn** of a Combat Round everything you attempt to do requires taking an **Action**. By default all

characters have 2 Actions available per Combat Round; additionally gaining 1 Action per Initiative Die held at the start of their Turn. Characters with a speed boost (whether augmented, magical, or otherwise) may gain additional Actions that can be performed using just their minds. No character may have more than 6 total Actions at the start of their Turn. Some Actions may require spending more than 1 of a character's available Actions to represent their increased complexity and time requirements, or the Action may only be taken once per Round. Other Actions may require that they be the only Action attempted on a character's Turn, or even require multiple Rounds to complete. Actions may be taken in any order you desire and you must use all available Actions on your Turn, unless saving Actions for the use of **Reactions** later in the Combat Round. At the end of a Round any unspent Actions are lost. You may NOT save Actions to increase your total Actions on the following Combat Round; use them or lose them. To use a Reaction, a character must have the required Actions available, either by saving those Actions if they acted previously in the Combat Round, or by preemptively using them to react if they have not acted yet, *e.g.; A character takes their Turn with 4 available Actions. They spend 2 Actions on their Turn to attack, saving 2 Actions to use on Reactions later in the Combat Round.*

Activate/Deactivate Focus (1 Action) - Activate or Deactivate a bonded focus on your person.

Called Shot (1 Action) - Call a shot to a vulnerable location on a target. This Action must be paired with an Action to make an attack on the target of the Called Shot.

Drop/Grab/Throw Object (1 Action) - In one or both hands, drop held object(s), grab object(s) within reach, or throw away held object(s). If a Lift/Carry Test is required when grabbing something you must use the Pick Up Action instead.

Drop Prone/Stand up (1 Action) - Drop to the ground, gaining Prone Status, or stand up if already on the ground.

Drop Sustained Spell (1 Action) - End a Spell you were sustaining.

Eject (1 Action) - Remove the detachable magazine (box or drum) from a weapon, use the ejector to empty the entire cylinder of a cased pistol, or open and eject up to two empty cases from a break action weapon. Note: firearms that are fed by a clip will automatically eject the empty clip when the last round is fired.

Fire Weapon (1 Action) - A simple trigger pull to attack with a ranged weapon; applies to single shot, semi-automatic, and burst fire weapons. If dual wielding firearms this Action can be used to fire both weapons at once. This action also applies to letting loose an arrow from a bow or a bolt from a crossbow.

Gesture (1 Action) - Gesture with your hand(s), or make

any series of hand signals that can be accomplished within 3 seconds. Other characters who do not know what your gesture means may attempt an Intuition (2) Test to decipher.

Interact with Device (1 Action) - Activate, deactivate, or change simple functions of any device on your person or within reach. This is a catch all Action to cover any simple interactions not covered by Skills or more complex Actions, *e.g.; Changing the firing mode of your assault rifle from burst fire to full auto could be accomplished via this Action to flip the giggle switch.*

Load (1 or 2 or 3 Actions) - This Action is used for three purposes: to load individual rounds of ammunition into an ammunition feeding device with 1 Action, to reload a weapon with more complicated feeding mechanisms or loading requirements by spending 2 Actions, or to reload a cap & ball weapon with 3 Actions. When loading an ammunition feeding device (or any open break action weapon) a number of rounds equal to the character's AGI are loaded; this includes: cylinders, detachable magazines, internal magazines, shotgun chutes, stripper clips, or speed loaders. For belts, clips, or drums a number of rounds equal to the character's AGI / 2 (rounded up) are loaded. With a successful AGI (3) Attribute Test, up to 1 extra round of ammo is loaded per net hit. If this test fails, the character fumbles attempting to reload too quickly and only loads half the number rounds they would normally have, rounded down. A glitch or a critical glitch is likely to drop the ammunition, jam the feeding device, or worse at GM discretion. Load may also be used, by spending 2 Actions, to reload a muzzleloading weapon with a single round of ammunition, reload an empty breech loading weapon with a single round of ammunition, or to reload a belt fed weapon with a new belt. With the use of 3 Actions, Load may be used to reload the powder charge and projectile of a cap & ball weapon with a ramrod.

Melee Attack (1 Action) - Initiate any physical attack, unarmed or with weapons.

Move (1 Action) - Your character moves, generating 1 point of movement. Move up to 10 meters if a specific distance matters. To move further or faster, use the Sprint Action.

Observe in Detail (1 Action) - Make a Perception Test or an Assensing Test in the middle of combat to pick out non-obvious details that might otherwise be lost among the flying lead and fists. This Action requires that no other Actions be taken on your Turn, but this requirement may be ignored if the character makes a Perception + INT (4) Test. If this test fails, the character may not notice things they would otherwise have seen with Observe in Detail, or if the test glitches (or critically glitches) the character may interpret what they see incorrectly, at GM discretion.

Pick Up/Put Down Object (1 Action) - Set an object you are carrying down somewhat gently, as opposed to drop-

ping it, or pick up an object within reach carefully. This Action is also taken when attempting a Lift/Carry Test with a heavier object. This Action embellishes a degree of carefulness and restraint with the object you are manipulating and may not be combined with 'energetic' Actions such as Move or attack Actions, at GM discretion.

Quick Draw (1 Action) - Draw, ready, and attack with a pistol or pistol sized firearm, or a small throwing weapon. A Weapon Skill + Reaction (3) Test is required to safely clear the weapon from a holster or sheath and attack; if this test fails the weapon is drawn but no attack is made. The quick draw threshold drops to (2) difficulty if using a quick-draw holster. On a glitch the weapon is stuck in the holster or dropped. On a critical glitch the weapon is flung away or fired while still holstered, at GM discretion. Two weapons may be quick drawn at once but each requires a free hand and separate Weapon Skill + REA (4) Tests; if *Ambidextrous* this becomes a Weapon Skill + REA (3) Test for both weapons. A quick-draw holster is required for both weapons to gain the normal threshold reduction or else the one without will retain a higher threshold, and both the bonus from a quick-draw holster and the bonus from *Ambidextrous* may be combined to drop the threshold of one or both weapons to (2). When attempting to Quick Draw a single action or double action revolver, the threshold increases by 1 difficulty unless the hammer is already cocked.

Ready Weapon (1 Action) - Deploy, unsheathe, draw, or otherwise ready a weapon carried upon your person, or ready a vehicular mounted weapon or a previously set up crew served weapon that you occupy. When using this Action with small throwing weapons such as knives or shuriken, you may ready a number of them up to your AGI rating. Weapons must be readied before they may be used for attacks, unless using Quick Draw.

Reload (1 Action) - Reload a weapon that was previously empty to its full capacity with an ammunition feeding device. This may apply to inserting a detachable magazine, drum, or clip into a weapon, reloading a pistol cylinder with a speed loader, reloading an internal magazine fed shotgun with a shotgun chute, or reloading an internal magazine with a stripper clip.

Reload Smartgun (1 Action) - If linked, wired or wirelessly, to a Smartgun equipped weapon using detachable magazines or drums, you may eject and reload with a single Action.

Speak/Text (1 Action) - Say what you can within a 3 second time frame, or what you can type or text via a commlink or direct neural link.

Take Aim (1 Action) - Take aim with a weapon to gain +1 dice pool modifier to the next attack, or to gain +1 to Accuracy with a firearm. Take Aim may be used multiple times, and extended over multiple Combat Rounds, gaining +1 DPM or +1 Accuracy each time; the maximum

bonus is equal to half your WIL, rounded up. The bonuses from Take Aim are lost if any action is taken other than an action to attack with the weapon, excluding Called Shot.

Unload (1 Action) - This Action unloads individual rounds of ammunition or empty cases from ammunition feeding devices; including: cylinders, detachable magazines, internal magazines, shotgun chutes, stripper clips, speed loaders, drum magazines, clips, and belts. By default a number of rounds equal to the character's AGI are unloaded. With a successful AGI (3) Attribute Test, up to 1 extra round of ammo is unloaded per net hit. At GM discretion, failure of this test may result in fumbling of ammunition or empty cases, unloading half (rounded down) of what they normally would have, with potentially more severe consequences on a glitch or critical glitch. This Action is also used to unload a single round or empty case from a muzzle loading weapon, unload a cap & ball weapon, or to open the breech of a breech loading weapon and unload a single round or empty case.

Reactions:

Dodge (1 Action) - Attempt to dodge an incoming attack. Roll Reaction + Intuition to increase your Defense Rating against a single attack.

Block/Parry (1 Action) - Use your Close Combat skill to deflect an incoming melee attack. Roll Close Combat + Agility to increase your Defense Rating against a single melee attack.

Full Defense (2 Actions) - Focus entirely on defending yourself. Add your Willpower to your Defense Rating against all attacks for the remainder of the Combat Round.

Gear:

Gear Stats:

Accuracy (ACC) - Overall accuracy of a firearm, capping the number of hits it can achieve on a single attack roll.

Active Program Slots - How many programs a device can simultaneously run.

Ammo - The ammunition capacity of the weapon and its feeding mechanism type: **(b) break action**, **(belt) belt fed**, **(bl) breech loading**, **(c) clip**, **(cb) cap & ball**, **(cy) cylinder**, **(d) drum**, **(dm) detachable magazine**, **(m) internal magazine**, **(ml) muzzleloader**.

Armor Penetration (AP) - AP, or Armor Penetration, is the value that indicates how a weapon interacts with armor. This value is usually negative to show how much it degrades armor, but some weapons may have 0 or null AP values, and others may even have positive values to represent how much more effectively armor defeats them.

Availability - The higher the number, the more scarce an item is and the more difficult it is to find it. Gear without an Availability can always be found and purchased anywhere it would be appropriately offered.

Capacity - A capacity value indicates how many slots a device or a piece of cyberware has available to accept upgrades, sensors, subsystems, etc. Capacities listed in brackets [x] are the cost of that upgrade, or the number of slots that it takes up.

Concealability - This value indicates how easy or difficult it is for an item to be concealed on a character. Concealability is used as a threshold modifier to attempts to detect hidden items with a Perception Test.

Cost - The base cost in nuyen to purchase the item.

Damage Value (DV) - The Damage Value, or DV, represents how much damage a weapon inflicts when it hits. This number is paired with a P or S to indicate Physical or Stun damage, and may have a parenthetical annotation to indicate further elemental damage types, such as (e) for electrical or (f) for fire.

Device Rating - The overall quality and effectiveness of the item.

Essence - The Essence cost for Cyberware and Bioware; how much a character's Essence is reduced when the augmentation is implanted.

(II)legality - If an item is legal its Availability will be listed as only a number, however illegal gear will have an appended legality code in parenthesis, including: **(R) Restricted** and **(F) Forbidden**.

Mode - The firing mode(s) available to a weapon, including: **(SS) Single-Shot**, **(SA) Semi-Automatic**, **(BF) Burst Fire**, and **(FA) Fully Automatic**.

Mount - The location an accessory mounts on a firearm, including: underbarrel, barrel, and top-mount.

Range - How far a ranged weapon can shoot to, or what Range Bracket it may fire to. This is an abstraction of what range a given weapon would be effective to, even though it can likely fire farther and can still potentially be effective. **(PB) Point Blank, Close, Near, Far, Distant**.

Reach - A value representing the length and reach of a melee weapon.

Recoil Compensation (RC) - Recoil Compensation, or RC, represents how well a firearm reduces the recoil when it fires. A number in parenthesis indicates the full RC available when a weapon is fully in use, such as having a folding stock or bipod deployed.

Weight - The weight in kilograms of the item.

Firearms:

Taser & Dart Guns - Tasers include any firearm that is primarily designed to be non-lethal by delivering a powerful electrical shock to incapacitate the target. Tasers are typically very short range, firing electrodes trailing wires that link to the weapon allowing them to discharge an electrical shock from the weapon's capacitor. Some

tasers fire darts containing their own high voltage batteries. Dart guns can be non-lethal with incapacitating agents such as Narcojet, but can just as easily deliver deadly toxins to the target. Tasers and Dart guns may mount one top-mount accessory unless otherwise specified. If Wirelessly enabled, a successful hit with a Dart or Electrode will provide the attacker with his target's basic health status and Condition Monitors in generalized information.

Cavalier SafeGuard (Electrodes): The SafeGuard uses less powerful conductors than most other tasers, but compensates for this disadvantage with a higher ammunition capacity and an integral top-mounted laser sight. *Laser Sight*.

Defiance EX Shocker (Electrodes): This taser fires 4 darts that trail wires out to 20 meters and features a muzzle contact that allows it to be used as a stun weapon in melee. To make up for the constrained range of the wired darts, this taser includes a very powerful capacitor to deliver extreme discharges to the target. In addition, if the target has not removed the electrodes or severed the trailing wires after a successful hit, the attacker may make an automatically successful attack by discharging the capacitor again. Each successive use while the electrodes are still in contact with the target consumes 1 ammo to represent the drain on the taser's capacitor.

Defiance Super Shock (Darts): A popular UCAS law enforcement taser, firing side by side heavy darts and comes equipped standard with a Low-Light Imaging Scope. *Imaging Scope (Low Light)*.

Krime Tangler (12ga): Krime's taser offering is a heavy, robust pistol that fires their proprietary shotgun-shell stun darts.

Narcoject One (Darts): A Narcoject branded pistol that only fires Narcoject darts, it may not use any other toxins.

Parashield Dart Pistol (Darts): The industry standard dart pistol that fires injection darts loaded with Narcojet or another payload.

Parashield Dart Rifle (Darts): Parashield's rifle uses compressed air to launch darts much further than their pistol. Comes equipped with a top-mounted imaging scope and may accept underbarrel accessories or modifications. *Imaging Scope*.

S-1130 Assassin (Plasteel Darts): A lightweight dart pistol originally developed for the Russian FSB that is made entirely of ceramic and plasteel components. The Assassin even shoots plasteel darts, rendering it invisible to both MAD scanners and chem sniffers. The darts can be coated with a variety of toxins and poisons, or simply Narcojet, and are available for +9¥ each. *Ceramic/Plasteel Components Rating 6*.

Tiffani-Defiance Protector (Electrodes): A perfect ladies'

companion in insecure areas, the Protector features a top-mounted laser sight and a gecko grip which allows it to stick to any surface and makes it nearly impossible to remove from its user's grasp. The gecko grip functionality can be activated or deactivated with a discrete button press or wirelessly. *Gecko Grip, Laser Sight.*

Yamaha Pulsar I (Darts): Fires high voltage capacitor darts, eliminating the need for wires and increasing the rate of fire.

Yamaha Pulsar II (Darts): Functionally identical to its predecessor, the Pulsar II includes a pair of contacts at the base of the grip to allow it to function as a stun club.

Tasers & Dart Guns	ACC	DV	AP	MODE	RC	RANGE	AMMO	AVAIL	WEIGHT	COST
Cavalier Safe-Guard	5(6)	4S(e)	+2	SA	0	Close	6(m)	–	0.75	200¥

Hold-Outs - Hold-Outs are very small, easily concealed pistols that are usually weak and inaccurate, but make the perfect last ditch backup weapon. They are too small to mount any normal off the rack firearms accessories.

Cannon Punch (various) Essentially a short, wide metal tube with an ignition switch and a strap for attaching to the hand. It can be loaded with a variety of material from

crushed glass, rocks, or nails and powered by a variety of homemade explosives or cheap black powder cubes available for +10¥ per box of 10. Activation can be done with a simple clenching of the fist; timing this correctly allows the weapon to fire as it comes into contact with the target, but it is possible to land a well aimed shot at very short distances. At GM discretion the damage may be modified based on the explosives used to power this

weapon or the material loaded into it. Accuracy for this weapon is equal to AGI when used as a contact weapon.

Cavalier Arms Scout (3mm Cavalier) The world's most compact semi-automatic pistol that can easily fit in a pocket, it even includes a pocket clip on the frame.

Caseless Only

Colt New Model Revolver (.32 Colt) Colt's attempt at a cheap civilian revolver through resurrecting an ancient design. Only reliable with Colt brand speed loaders. A very low recoil and surprisingly accurate hammerless revolver, if anemic in power.

Cased Only, Double Action

Colt Secret Agent (.22 WMR) Colt's modern, light, concealed carry revolver. The Secret Agent is a very thin and flat pistol that is easily concealable and with non-metal construction can evade MAD scanners. Standard features include a detachable form fitting laser sight with grip activation.

Cased Only, Ceramic/Plasteel Components Rating 3, Double Action, Laser Sight

Enfield M1098 (9mm Para) An obsolete pistol that went out of service with the RAF in the 2050's, the Enfield is nevertheless prized for its small size and ergonomic features.

Vintage

Fichetti Tiffani Needler (4mm Fichetti) A designer handgun that fires caseless flechette rounds. The color-changing coating can be manipulated wirelessly, making it the perfect lethal fashion accessory. When changing the coating color to an appropriate camouflage pattern for the setting, increase the Concealability of the weapon by 1. The Needler's damage codes are factored for the flechette ammunition.

Caseless Only, Flechette Only

Fichetti Tiffani Self-Defender (4mm Fichetti) The predecessor to the Needler, this hold-out pistol features the same color-changing nano-coating, but is not limited to flechette rounds.

Caseless Only

HK P48 (.22 LR) Smaller than the palm of your hand and capable of full auto fire, the HK P48 only uses caseless ammunition and is capable of a 3 round burst activation by a re-trigger mechanism similar to the Browning Ultra-Power.

Caseless Only

Krime Vester (.357 Magnum) Krime's metahuman

adapted derringer is barely large enough for a troll to utilize. It comes equipped with an integral knife blade which can function as a punch dagger.

Bayonet, Metahuman Adaptation

Morrissey Élan (.38 Auto) An elegant hold-out pistol designed to look and feel as if it is an extension of its owner's hand, the Morrissey Élan is the epitome of concealability, being made entirely of polyresin materials, and thus immune to MAD scanners.

Ceramic/Plasteel Components Rating 5

Raecor Sting (.22 LR) An unobtrusive, easily concealable "lemon squeezer" that fits entirely in your hand, the Raecor Sting has a very low capacity and exclusively fires anemic flechette rounds, barely suitable for more than point blank pest control. It is made entirely of non-metallic, ceramic materials, rendering it immune to MAD scanners. The Sting's damage codes are factored for the flechette ammunition.

Ceramic/Plasteel Components Rating 6

Shiawase Arms Type K2072 (5mm Shiawase) Shiawase's hold-out pistol in their new Fashion Line. Features StayGrip technology.

Caseless Only, Gecko Grip, Single Action

SIG Sauer P298 (.38 Auto) Last produced in 2037, this very old model of pistol is still reliable and features an ambidextrous safety and configurable ejection port.

Vintage

Stinger Pen Gun (.22 LR) A simple ink pen modified to contain a single low caliber cartridge and set off by depressing the pen cap. Receives +4 to Concealability Thresholds.

» USER: Loki «

If you're stuck in the OKC-Metro grid without a piece, just fire up your localized fabber. The Streetline Special is a cheap, easily 3D printed pistol made of composite materials. It won't beat an Ares Predator, but it beats harsh language.

Streetline Special (.25 Auto) A cheap, easily 3D or nano printed pistol made of composite materials.

Ceramic/Plasteel Components Rating 3

Terracotta Arms Pup (.38 Auto) Both the civilian and government models of this pistol contain an integral Smartgun system. The government version, with higher availability, also comes with a customized suppressor.

Smartlink, Suppressor

Walther Palm Pistol (.40 S&W) This European hold-out packs large caliber rounds in an over-under configuration with a tilting break action barrel. Both barrels can be fired simultaneously with Burst Fire.
Cased Only

Walther Secura SuperKompakt (7mm Auto) Walther's larger Secura & Secura Kompakt just got a tiny little brother. Firing the same cartridge but miniscule by comparison, the SuperKompakt is easily concealed and constructed from MAD scanner defeating materials.
Ceramic/Plasteel Components Rating 4

Light Pistols - Light Pistols occupy the middle ground between hold-outs and heavy pistols, they are usually accurate and can accept top-mounted and barrel-mounted accessories.

Ares Light Fire 70 (9mm Para) A professional operator's pistol made by Ares. Comes standard with laser sight and an optional suppressor for +750¥. This highly efficient suppressor increases the Threshold for auditory Perception tests by 3 when equipped.

Laser Sight, Suppressor

Ares Light Fire 75 (9mm Para) An upgraded Light Fire 70 that comes standard with smartlink software and hardware.

Laser Sight, Smartlink, Suppressor

Barrens Special (Various) Illegally manufactured revolvers off the streets of the sprawl. Shoddy construction, unreliable, and usually with some form of bayonet or knife mated with the barrel as a last resort for when the gun inevitably jams.

Bayonet

Beretta 101T (.38 Auto) A popular pistol with security forces thanks to its ease of maintenance.

Beretta 200ST (.38 Auto) A military service version of the classic Beretta line capable of fully automatic fire. Comes with a detachable shoulder stock and very high capacity triple stack magazines.

Folding Stock

Beretta 201T (.38 Auto) Burst fire capable version of the 101T, it comes with a detachable shoulder stock and an extended magazine.

Extended Magazine, Folding Stock

Beretta 92SL (9mm Para) A veteran of the Second EuroWar, earlier models command a premium with collectors. One of the most common and functional pistols in the gutters of the shadows worldwide.

Vintage

Browning Ghost (9mm Para) A joint venture between Browning and Victorinox resulted in a remarkable concealed carry pistol. The Ghost is constructed from a polymer based on Victorinox's SmartSteel, allowing it to mold and contour itself in a flexible state when not in use. While in the flexible state, increase Concealability Thresholds by 3. Changing to or from this flexible state requires an Interact with Device Action. The Ghost may not fire while in its flexible state, and may not accept any other modifications or accessories.

Electronic Firing, Personalized Grip, Smartlink

Cavalier Arms Adder Slivergun (3mm Cavalier) Reminiscent of a pared down Ares Viper Slivergun, this pistol was originally developed for a mail-delivery corp. The Adder's damage codes have been factored for flechette ammunition.

Caseless Only, Flechette Only

Cavalier Arms Dragoon (3mm Cavalier) A pistol designed for larger metahumans and designed to exacting quality control standards.

Metahuman Adaptation

Ceska vz/120 (.38 Auto) This Czech made light service pistol is widely used in Eastern European militaries.

Colt America L36 (.38 Auto) Colt's ubiquitous classic light pistol design. Available anywhere, easily concealable, and cheap; the perfect throwaway weapon. When wirelessly enabled this pistol's registry info and ownership data can be changed at the drop of a hat.

Colt Asp (.38 Special) The Colt Asp is a cheap, effective, solid performer of a revolver, but it lacks the power or ammo capacity of many other light pistols.

Double Action

Colt Coral Snake (9mm Para) A best selling home defense weapon that offers exceptional range to other sidearms in its class. Endorsed by Lone Star.

Double Action, Laser Sight

Colt Special Agent (.40 S&W) Continuous upgrades

have kept this Colt frame in service for over a century. An easily concealable, nearly hold-out sized pistol that packs in a small, but quite powerful number of rounds more suited to a heavy pistol. The Colt Special Agent does not have room for any internal modifications.

Vintage

Fichetti Executive Action (4mm Fichetti) Burst fire capable light pistol with a high magazine capacity. Simple and Effective, it has no other stock features.

Caseless Only, Extended Magazine

Fichetti Security 500 (4mm Fichetti) Popular with security forces for its ease of use.

Caseless Only

Fichetti Security 500A (4mm Fichetti) Extended magazine variant of the Fichetti Security 500.

Caseless Only, Extended Magazine

Fichetti Security 600 (4mm Fichetti) Updated version of Fichetti's popular security pistol with an even more efficient feeding mechanism. Comes standard with a detachable folding stock and a laser sight.

Caseless Only, Folding Stock, Laser Sight

Fichetti Thunder (4mm Fichetti) A strange offering from Fichetti, the Thunder makes use of the 'metal storm' concept of barrels packed with multiple in-line rounds that can be electronically fired in quick succession, increasing the rate of fire but requiring a full barrel replacement (with pre-loaded ammunition) or a lengthy muzzle loading process. The Thunder is designed to quickly swap its 4 barrels, each containing 6 caseless rounds. Designed for larger metahumans, a puzzling choice given the small caliber and most Ork and Troll desires when it comes to firearms. When firing the Thunder empties an entire barrel, shooting 6 shots with a single burst. The Thunder can be reloaded by inserting individual caseless rounds into a barrel, but more commonly entire loaded barrels are swapped out for empty barrels; this uses the same mechanics as a normal magazine change with 1 Reload Action per barrel switched.

Electronic Firing, Metahuman Adaptation

Hammerli 610S (9mm Para) A target pistol that is highly accurate to extended ranges, the Hammerli 610S features custom, personalized grips and the precision machined components one would expect of Hammerli. It cannot mount barrel accessories due to an integral gas-vent system.

Gas Vent Rating 1, Personalized Grip

Hammerli 620S (9mm Para) An update of the 610S, the Hammerli 620S features the same sleek and stylish de-

sign and quality of manufacture, along with the integral gas-vent system. It may not live up to its predecessor's potential accuracy as a customized target pistol, but makes up for it with a cheaper cost and the addition of a smartgun system.

Gas Vent Rating 1, Smartlink

HK Caveat (): A large framed H&K pistol that can intimidate pass for a much heavier, more powerful, and dangerous weapon. Commonly carried by corp suits with more bark than bite.

HK P50 Tactical (9mm Para) An integral Smartgun system, an offline laser sight, and the ability to field strip to base parts in seconds make this sleek offering from HK quite desirable.

Easy Breakdown, Laser Sight, Smartlink

Krime Stopper (12 gauge) A break action 12 gauge side-by-side shotgun that has essentially been cut down into a pistol, but sized for beefy hands as is the standard of Krime weapons. Contains a clip for holding 5 shells under the barrels for quick and easy reloading.

Ammo Storage, Metahuman Adaptation, Short Barrel

Mauser Ladyline (): An elegant pistol with a feminine design but surprising stopping power.

Nitama Sporter (.38 Special) A popular home defense pistol that suffers from a small internal magazine. The Nitama Sporter is lightweight, has low felt recoil, is equipped with a long barrel, and features a built in laser sight. Originally marketed for smaller sized metahumans.

Laser Sight, Long Barrel, Metahuman Adaptation

Onotari Arms Security Special (.40 S&W) Onotari Arms' Security Special is a highly advanced pistol with a complete electronics suite intended for security and law enforcement. It features a smartgun system enhanced by an ammunition skip and safe target system, allowing its users to know where every shot will go and when it needs to be there.

Ammo Skip System, Safe Target System, Smartlink

Ruger Redhawk (.357 Magnum) This revolver is the little brother of Ruger's Super Warhawk and features the same rugged construction and dependability. A revolutionary action system allows this revolver to switch from single action to an automatic action with the flip of a switch, requiring an Interact with Device action.

Single Action

Seco LD-120 (9mm Para) A remake of Israel's LD-100 pistol, the Seco LD-120 comes with an integral top-mounted laser sight.

Laser Sight

Shiawase Arms Hearth Protector (.32 Auto) Marketed as a home defense pistol, the Hearth Protector has been endorsed by law enforcement agencies and features a lightweight, slim, low recoiling design that is easily controllable.

Advanced Safety (Basic)

Shiawase Arms Light Tactical (5mm Shiawase) Shiawase Arms' Light Tactical is a lightweight service pistol designed with input from law enforcement. Polymer panels and an alloy frame allow extended carry without discomfort. Various inserts allow any user to customize the grip to their requirements. To top it off, a powered slide crammed into the underside of the barrel allows this pistol to accept one more aftermarket accessory than normal.

Personalized Grip, Powered Slide

Shiawase Arms Puzzler (5mm Shiawase) The Puzzler is made from what appear to be twenty different ordinary everyday items. To assemble into a firearm or to disassemble back to the component pieces requires an Armor + LOG (6, 1 minute) Extended Test. A glitch requires starting over; a critical glitch causes damage, rendering the weapon inoperative. Identifying the individual items as a firearm requires an Armor + LOG (3) Test or Perception + INT (4).

Taurus Mark XXXI (5mm Taurus) Endorsed by multiple corporations as the epitome of home defense, this light pistol features RFID tracking ammunition that is more useful for tagging an intruder than harming them. It is so unlikely to cause death that multiple insurance corps have offered a discount to homeowners who possess this, and only this, firearm.

Caseless Only, Laser Sight

Taurus Omni-6 (.38 Special/.357 Magnum) A rugged and reliable revolver design that can load multiple types of ammunition. Interchangeable cylinders offer an easy swap between cased and caseless ammunition. Comes with an integral laser sight.

Laser Sight, Single Action

Walther P99 (9mm Para) A classic Walther design with new production under Saeder-Krupp and many unlicensed knock-offs worldwide.

Vintage

Walther PB-120 (.38 Auto) Walther's modern evolution of the venerable PPK is one of the most popular, if a bit dated, sidearms of mercenaries and air crews. An extended magazine is readily available for 12¥ each, but lowers the Concealability threshold by 1 when equipped.

Walther PP110 (.38 Auto) In response to glitches in the initial run of the Fichetti Executive Action, Walther attempted to increase their market share by releasing the PP110. Remarkably accurate, but lacking in stopping power, the PP110 benefits from a high capacity double stack magazine, an integral flashlight that can be swapped for a laser sight for +150¥, and a customizable backstrap to fit any size hand. Walther included a highly advanced biometric safety system since this pistol was intended for corporate security and law enforcement use.

Advanced Safety, Flashlight, Metahuman Adaptation

Yamaha Sakura Fubuki (6mm Yamaha) Yamaha's "Cherry Blossom Storm" is a radical design for a light pistol. In place of normal magazines, it features a quartet of barrels stacked for most of their length with in-line caseless rounds firing a flat, coin shaped bullet. There are no moving parts inside the pistol and it is capable of firing rapid bursts; for this reason a folding stock is included that merges with the pistol grip when not in use. Each pull of the trigger fires 1 shot from all 4 barrels (a 4 round burst), or 10 shots from a single barrel (a full auto attack); may be wirelessly or manually selected. Reloads the same as the Fichetti Thunder, swapping 1 pre-loaded barrel for an empty barrel with a Reload Action the same as magazine changes for detachable mag firearms.

Electronic Firing, Folding Stock

Yamaha Sakura Fubuki Six (6mm Yamaha) A new version of the "Cherry Blossom Storm" that is more reliable, more compact, and less than half the cost, but carries slightly less ammunition. Each of the four barrels only holds 8 caseless rounds and it lacks the folding stock of the original. A manual switch or wireless activation can set whether each trigger pull fires a single round, or a 4 round burst of 1 shot from each barrel simultaneously; otherwise the Fubuki Six functions the same as its predecessor.

Electronic Firing

Glock-Mini Giftzwerg (Special) Known as the 'poison dwarf', this unique light pistol only fires special explosive rounds. Although it operates as a single shot weapon, the impact makes up for it.

Custom Ammo

HK Caveat (9mm Para) A large framed H&K pistol that can intimidating pass for a much heavier, more powerful, and dangerous weapon. Commonly carried by corp suits with more bark than bite.

Mauser Ladyline (.38 Auto) Mauser's "Ladyline" models were originally made for female execs, tailored to fit smaller hands, but they soon found widespread acceptance amongst the metahuman varieties since they fit

dwarves almost identically.

Metahuman Customization

Heavy Pistols - Large pistols that pack lots of firepower. Capable of taking both barrel mounted and top-mounted accessories.

Altmayr Black Moon (.41 Mag): A high quality german-made revolver with exceptional accuracy in a large caliber. The Black Moon features a lower than normal barrel alignment and does away with an external hammer in favor of electronic firing. Features tactical railing both above and below a long barrel to accept a level of customization most other revolvers can't match. *Caseless Only, Double Action, Electronic Firing, Long Barrel, Tactical Rail.*

Ares Predator I (10mm Auto): The original offering from Ares, or a suitable knockoff, that provides the reliability and stability that the entire series has staked its reputation on. It does not mount an internal smartgun system, which would become standard on later models, but it is still a solid and dependable firearm. *Incompatible.*

Ares Predator II (9mm Para): A departure from the rest of the Predator line, the II was an attempt to improve the ammunition capacity and concealability over the original. It features a streamlined, more ergonomic design and an integral smartgun system, although outdated and requiring translation software and a fiber optic cable for a direct link. This pistol receives a +1 to Concealability Thresholds. *Incompatible, Smartlink.*

Ares Predator III (10mm Auto): Otherwise identical to the original Predator I, the III model added the internal smartlink system that runners have come to expect. *Smartlink.*

Ares Predator IV (10mm Auto): Somewhat more common than other iterations of the design thanks to an over-run of production, the Predator IV has no discernable

differences from its predecessor or forebearer. *Smartlink.*

Ares Predator CW (10mm Auto): A cold weather variant of the Predator IV that removes the trigger guard to accommodate heavy gloves, reduces the number of internal failure points with electronic firing, and has been streamlined and otherwise custom made to withstand extreme cold. *Electronic Firing, Extreme Environmental Modification (Arctic), Smartlink.*

Ares Predator V (10mm Auto): Riding on name brand recognition alone, the 5th installation of the Ares Predator offered no improvements over previous models. *Smartlink.*

Ares Predator VI (10mm Auto): Ares based the Predator VI on the frame of the original Predator while internally upgrading nearly every aspect of the design. The ubiquitous smartgun system is joined by burst fire capability and an ammo selection system designed to cycle any type of round loaded into the specially designed magazines (30¥ per extra magazine). *Ammo Skip System, Smartlink.*

Ares Striker (.38 Super): A throwback design with no electronic components or wirelessly enabled features, the Ares Striker features a standard top-mounted red dot. *Red Dot Sight.*

Ares Viper Slivergun (Ares Flechette): This sleek slivergun fires flechette ammunition from a high capacity magazine and is capable of rapid burst fire. It features an integral silencer for built in sound suppression. Damage codes already factored for flechette ammunition. *Caseless Only, Flechette Only, Suppressor.*

Beretta 97 (.40 S&W): A heavier development of the Beretta 93, the 97 adds a short burst capability and was

a staple of the EuroWars that transitioned to law enforcement use across Europe.

Browning Max-Power (.40 S&W): Browning's attempt to compete with the Ares Predator of old fell short in both categories of hitting power and electronics. It features a top-mounted laser sight and a smaller magazine size, but it is still one of the most concealable heavy pistols available. *Laser Sight*.

Browning Mega-Power (.40 S&W): After failing to meet the ability of the Ares Predator, Browning updated their main pistol line with an entry that went even further in the realm of built in electronic features. The Mega-Power has an expanded magazine to match the capacity of its Ares rival, and features a smartgun system accompanied by a safe target system and an advanced safety. *Advanced Safety (Basic), Safe Target System, Smartlink*.

Browning Phantom (.38 Super): A larger version of the Browning Ghost, the Phantom features all of the same design specifications. The same Interact with Device action is required to swap from an inflexible to a flexible state, and it receives an increase of Concealability Thresholds by 3 while in the flexible state, but cannot be fired without reverting back to its original state. *Electronic Firing, Personalized Grip, Smartlink*.

Browning Ultra-Power (10mm Auto): Browning's final entry that matches the performance of their competitor, but exchanges the smartgun system for a top-mounted laser sight to keep a reduced cost. *Laser Sight*.

Cavalier Arms Champion (.30-30): Cavalier's Champion is a large, single shot, break action gun designed to accurately fire a full up rifle round from a pistol frame.

Cavalier Arms Deputy (.41 Mag): A throwback to a rise in western aesthetics, the Deputy offers a reliable gunslinger's competitor to Ruger's Super Warhawk while being less punishing on the wrist. *Single Action*.

Cavalier Arms Marshall (.46 Cavalier): Designed to compete with the Predator VI, the CA Marshall is a revolutionary revolver design featuring an internal smartgun system linked to a ammunition selection system. While the cylinder holds 6 rounds, an ammunition reservoir along the left side of the pistol holds an additional 6 rounds that can be wirelessly interchanged to pick the right ammunition at the right time. This reservoir also serves as a brass catcher and can hold 9 empty cases, making policing your brass much simpler with this revolver. The flat nosed design of the cartridges to ease with ammo interchangeability coupled with the unbalancing weight on one side from the ammo reservoir seriously detracts from this pistol's accuracy in general and especially at range. *Ammunition Skip System, Cased Only, Smartlink*.

Cavalier Arms Sheriff (.44 Mag): Utilizing a larger caliber round than the Deputy, this pistol is Cavalier's attempt to create a high tech revolver that outperforms Ruger's

Super Warhawk. It is a heavyweight revolver featuring an integral smartlink and trigger removal, giving it outstanding accuracy when both are utilized. *Double Action, Melee Hardening, Smartlink, Trigger Removal*.

Cavalier Arms Thunderstruck (10mm Auto): A successor to the Ruger Thunderbolt, licensed to Cavalier for production with the requirement that only a fraction be sold to non-Lone Star security forces. Designed with years worth of Lone Star ballistics and crime data to back it up, the Thunderstruck features an incredibly high rate of fire and matching recoil compensation. Any uncompensated Recoil when firing is doubled. The Thunderstruck can accommodate 2 side-mounted accessories and/or modifications. *Gas Vent Rating 2, Smartlink*.

Colt Future Frontier (.45 LC): A modern remake of a large frame pistol that embodies Colt's "Trust the Legend" brand, the Future Frontier takes advantage of modern manufacturing techniques and metallurgy. *Melee Hardening, Single Action, Vintage*.

Colt Government 2066 (.45 Auto): Based on the legendary Colt 1911A1, this re-imaging uses an electronic spark to detonate primers and is known to be incredibly reliable thanks to the lack of most moving internal parts. *Electronic Firing*.

Colt Manhunter (.45 Super): Derived from a custom piece made famous by a bounty hunter, Colt's now classic Manhunter line features an advanced, yet simple and unhackable wireless platform in a large caliber. *Holographic Sight, Laser Sight, Vintage*.

Colt M1991 (.45 Auto): An almost identical remake of the classic Colt, but still out of production for more than 50 years. *Vintage*.

CZ-64 (7.62 Tok): A twenty year old design that lacks the stopping power of most modern heavy pistols, the CZ-64 makes up for its shortcomings with being a well manufactured gun of above average quality. It trades a big bang or fancy electronics in favor of craftsmanship, reliability, and accuracy. Comes standard with an underbarrel mounted laser sight. *Laser Sight*.

Eichiro Hatamoto II (12ga): A single shot, large bore shotgun pistol intended for dealing with trolls.

Enfield Merlin (.455): A heavy British revolver characterized by its complete electronics package. Features an internal smartgun system, servos that automatically rotate the cylinder to select which specific chamber is used (only available wirelessly), and a rail system to quickly accept top or underbarrel accessories. *Ammo Skip System, Smartlink, Tactical Rail*.

FN 5-7C (FN 5.7): A modern update of a venerable classic, firing the same high speed, low caliber rounds designed to defeat personal body armor. Capable of burst fire in a highly stable platform.

Glock-Swarovski Eagle Eye (7mm Auto): Essentially a sniping pistol, the Eagle Eye's range is unsurpassed. It is a highly accurate design with an internal smartgun, an improved range finder, and an extended barrel. *Improved Range Finder, Long Barrel, Smartlink.*

Hammerli Gemini (.45 Auto): A boutique gunsmith's design licensed for mass production by Hammerli. The Gemini has a strikingly different appearance; it resembles a normal semi-automatic pistol but it has 2 barrels side by side and 2 magazines. A single action to fire shoots twice and consumes a round from each magazine. Double the cost of all barrel and magazine modifications and decrease Concealability Threshold by 1. *Custom Look.*

HK MK31 (7mm Auto): A predecessor to the more concealable Urban Fighter, this old HK pistol was top of the line when it was introduced. It features an underbarrel rail that came standard with a laser sight but is easily able to switch out for a smartgun system, and the barrel is threaded for the intended suppressor that most used models will be paired with. *Incompatible, Laser Sight, Suppressor.*

HK P60 Tactical (10mm Auto): A larger, heavier, harder hitting version of the HK P50 Tactical, this pistol is otherwise identical to the point that personalized grips can be freely swapped from a P50 to a P60 and vice-versa. *Easy Breakdown, Laser Sight, Smartlink.*

HK Urban Assassin (7mm Auto): The Urban Assassin is an attempt by H&K to produce a "disposable" pistol. It features the standard Urban line's ceramic and plastic construction, along with an internal smartgun system and suppressor, and an adaptable grip that molds to fit the user's hand. The most remarkable aspect of the Assassin is the use of a "Maker Mag", a sealed magazine using nanites and feedstock to craft the caseless rounds as needed for firing; the downside is that the magazine cannot be refilled or replaced. Rumors persist that HK is working on a nano spray capable of disintegrating the Assassin after use. *Ceramic/Plasteel Components Rating 6, Personalized Grip, Smartlink, Sound Suppressor, Standard Maker Mag.*

HK Urban Fighter (7mm Auto): HK's Urban Fighter is the sidearm to match the Urban Combat and has been nicknamed "The Invisible Gun". It is constructed entirely of ceramic and plastic components, and features specially designed magazines that hermetically seal when inserted to thwart chemsniffers. Caseless ammunition and electronic firing ensure reliable operation. A custom designed silencer is integrated into the barrel, providing an increase of 2 for Auditory Perception Thresholds. A smaller version of the hydraulic recoil compensation found in the Urban Fighter is present as well. This pistol may accept no other upgrades aside from customizing the grip and extra magazines are available for 100¥ at Availability 10(F). *Caseless Only, Ceramic/Plasteel Components Rating 6, Electronic*

Firing, Suppressor.

Izom HP-49B (.40 S&W): An otherwise unremarkable heavy pistol intended for military and law enforcement. The HP-49B is well designed for carrying with a smooth draw, but the factory installed underbarrel flashlight negates any advantage it would otherwise have. Renraku has resorted to offering bulk discounts to try to increase sales. *Flashlight.*

Izom PHP-131 (.38 Super): A lightweight pistol intended for smaller metahumans which features low weight composite construction and as few heavy components as possible. It features an integral underbarrel laser sight to aid in aiming. *Ceramic/Plasteel Components Rating 2, Laser Sight.*

Krime Broom (.410 bore): Krime's licensed copy of the Remington Roomsweeper, built to Troll standards and capable of fully automatic fire. Suppress a room? Try the whole fragging house! Includes a Troll sized increase in magazine capacity. *Metahuman Adaptation.*

Krime Heater (.50 AE): An oversized pistol for oversized hands, the Krime Heater has immense stopping power in an otherwise rough, unfinished appearing design. *Metahuman Adaptation.*

Krime Varmint (.50 AE): By adding a combination detachable stock/holster to the Krime Heater, Krime has created the barrens varmint gun. Improved iron sights, including a flip up peep sight, and two spare magazines contained in pouches on the stock/holster complete the conversion. *Detachable Stock, Metahuman Adaptation.*

Krupp Arms Lemat 2072 (.357 Mag/20 ga): Krupp's throwback to a classic American Civil War revolver that uses a double barrel design with the cylinder rotating around a central chamber holding a single shotgun shell. A built in ammo skipping system can be activated manually to switch to with the shotgun chamber with an Interact with Device action. *Ammo Skip System, Single Action.*

Makarov V.22 (.22 LR): An older model Makarov with an integral silencer barrel and chambered in a low power cartridge and tuned to function with subsonic ammo. An active listener 10 meters distant cannot detect a gunshot. It cannot accept any further barrel modifications or accessories. *Caseless Only, Suppressor.*

Morrissey Alta (.40 S&W): A fashionable heavy pistol known for reliability and accuracy. Comes with a top-mounted laser sight and a guarantee of satisfaction from Morrissey based on their previous 20 years of production and high sales. This pistol is always appropriate for higher end social situations. *Laser Sight.*

Morrissey Elite (.40 S&W): A smaller, more easily concealable version of the Alta, it receives a Concealability Threshold modifier of +2. A shorter barrel length hampers the accuracy of the Elite when compared to the Alta.

Comes equipped with the same top-mounted laser sight. *Laser Sight.*

Nemesis Arms Praetorian (10mm Auto): Designed for close quarters combat with a reinforced frame and a permanently attached underbarrel bayonet. *Bayonet, Melee Hardening, Laser Sight.*

Nemesis Arms Praetorian II (.40 S&W): The follow up to the first Praetorian redesigns the fixed blade to handle slashing attacks instead of stabbing thrusts. It also adds an internal smartgun system and adopts a less powerful cartridge to increase accuracy and raise ammo capacity. *Bayonet, Melee Hardening, Smartlink.*

Nitama NeMax (10mm Auto): A highly advanced pistol for high security areas, the NeMax is built with an integral smartgun system, a safe target system, and a biometric safety. Security guards equipped with this pistol will have no fear of accidentally hitting the valuable people they're paid to protect, or of having their own weapons turned against them. *Advanced Safety, Safe Target System, Smartlink.*

Onotari Arms Steadfast (.45 Super): Onotari Arms' Steadfast is a large caliber pistol marketed as a durable self defense gun that any member of the family can wield and is the company's first venture into the North American market. *Melee Hardening.*

Onotari Arms Troublemaker (7mm Auto): Designed to compete against the Predator line and disrupt Ares continued domination of the market for heavy pistols. Saeder-Krupp, through their Onotari Arms brand, have delivered a well made pistol that incorporates a piece by piece snap-on design that allows highly customizable ergonomics for each individual; by changing the exact fit of the various components, one can change the balance, center of gravity, and fit of the pistol to conform to each user's needs. A revolutionary and reliable helix magazine fits underneath the barrel, giving the Troublemaker a high capacity without requiring a lengthy extended magazine to disrupt the pistol's otherwise compact and clean lines. Includes a built in laser sight. The magazine cannot be modified in any way. *Laser Sight.*

Onotari Arms Vagabond (.357 Mag): With a distinctive brushed stainless-steel look, the Vagabond provides a smooth double action revolver with a bit more up its sleeve than usual. It is an automatic revolver that uses the energy and recoil of each shot to reset the hammer and rotate the cylinder. It also fires out of the bottom of the cylinder, giving it a lower bore axis and more stability than most other revolvers on the market. *Double Action.*

Onotari Arms Violator (7.62 Tok): Onotari's continued offering of the Violator comes complete with an optional monthly or yearly subscription to keep all software continuously up to date. While low capacity and lacking the power of many other heavy pistols, the Violator has a full

electronics suite featuring advanced safety, safe target, and smart gun systems. The pistol is a bit front end heavy thanks to all of these integral electronics being mounted around the sides and top of the barrel. *Advanced Safety, Safe Target System, Smartlink.*

PSK-3 Collapsible Pistol (9mm Gyurza): Designed for Russian secret police but later adopted by many governmental agencies and protection details worldwide, the PSK-3 is a pistol capable of folding up into a box the size of the average wallet. PSK stands for Pistolet Sptsialnyj Kemenova, or "Kemenov Special Pistol". At a press of a button, or an Interact with Device action, the pistol folds up or unfolds, as long as the magazine is removed or unloaded. A Perception + INT (4) Test must be passed to recognize that the folded up metal block is actually a pistol. With an Armorer + LOG (1) Test a character may toy with the block of metal and discover how to activate it to unfold. A specialized suppressor is available for the PSK-3 for an additional 700¥.

Remington Roomsweeper (.410 bore): More of a cut down shotgun than a pistol, the Remington Roomsweeper is an intimidating weapon that can fire both slugs and flechette rounds. *Double Action.*

Ruger Bloodhawk (.41 Mag): Ruger's attempt to enlarge their market share by creating a revolver similar to the Super Warhawk but designed for larger metahumans to easily wield, requiring a two handed grip in the lesser races. *Laser Sight, Metahuman Adaptation, Single Action.*

Ruger Super Warhawk (.44 Mag): A flashy, shiny, and chrome revolver that is nearly as intimidating on looks alone as the magnum pistol rounds it lobs down range. *Single Action.*

Ruger Thunderbolt (.45 Auto): Ruger's old burst fire pistol designed to the needs of Lone Star. The cyclic rate, chamber design, and inner workings of the pistol were built from the ground up to control recoil and maintain the desired high rate of fire without losing sight of the target. Comes equipped standard from the factory with an internal smartgun system (+400¥) or a built-in underbarrel laser sight (+100¥).

Savalette Guardian (.45 Super): Underneath the polished chrome outer look of the Savalette Guardian lies a highly advanced pistol. It features a built in smartgun system, an internal gyroscope to reduce recoil, and burst fire capability. *Smartlink.*

Shiawase Arms Copernicus (9mm Para): This offering from Shiawase is a somewhat underlooked pistol that offers a complete electronics package in an accurate and reliable platform. *Advanced Safety, Safe Target System, Smartlink.*

Shiawase Arms Heavy Tactical (.454 Casull): Don't believe the hype surrounding the marketing campaigns for

this pistol. Yes, it has every modern convenience one could ever want in a firearm. Yes, it packs enough punch to scare a heavily armored troll. However, it kicks like a cannon and is nearly uncontrollable thanks to its featherweight composite construction. It remains to be seen whether the technological advancements can make up for a difficult to use, inaccurate weapon. Comes standard equipped with a thermal suppressor to reduce the burst of flame that comes with every over powered shot. *Advanced Safety, Ceramic/Plasteel Components Rating 1, Safe Target System, Smartlink, Thermal Suppressor.*

Walther P109 (.40 S&W): A large bore semi-auto derived from Walther's burst capable P108 that features an early iteration of the gas vent system and a short detachable barrel extension to achieve slightly higher velocities. With the extension attached, the pistol receives +1 to Accuracy and -1 to Concealability Thresholds. It may not mount any other barrel accessories or modifications. *Vintage.*

Walther Secura (7mm Auto): The standard sidearm of

German police forces and many other European security agencies. Comes with an optional smartgun system for an extra +150¥.

Walther Secura Kompakt (7mm Auto): A lighter, smaller, more compact version of the Secura designed for undercover operatives. This pistol receives +1 to its Concealability Threshold. An optional smartgun system is available for +200¥.

Weapons World Infiltrator (10mm Auto): A heavier version of the Shiawase Arms Puzzler, the Infiltrator is manufactured by the Ares subsidiary Weapons World. This heavy pistol follows the same rules as the SA Puzzler for breakdown, assembly, and recognition. This pistol may not mount any further modifications or accessories.

Zastava CZ49 (9x18 Mak): The CZ49 was a simple handgun built by Zastava for various eastern European military and police concerns. It became very popular with the criminal underworld and shadowrunners after all records of production were lost in Crash 2.0.

Machine Pistols - Rapid firing pistol-sized weapons that are capable of burst fire or fully automatic fire while still being wieldable, if not fully controllable, in one hand. Can take top-mounted and barrel-mounted accessories or modifications.

Ares Crusader (9mm Para): A small, but heavy machine pistol that has large capacity and a very controllable high rate of fire thanks to an integral barrel-mounted gas vent system. *Extended Magazine, Gas Vent Rating 2.*

Ares Crusader II (9mm Para): This variant of the Crusader is an updated, but otherwise identical gun, that features an integral smartgun system and the same barrel-mounted gas vent system. *Extended Magazine, Gas Vent Rating 2, Smartlink.*

B&T MP9 (6.5 CBJ/9mm Para): An advanced design from the turn of the century that features a foregrip, high accuracy, and controllable automatic fire. Features a full tactical rail system that allows attachments in the top-mount position, underbarrel, or on either side. New production copies, of sometimes questionable manufacture, pop up from time to time in Middle Eastern and Asian countries. Original guns are usually found chambered in 6.5 CBJ, while newly made copies are usually in 9mm. *Foregrip, Tactical Rail, Vintage.*

Cavalier Arms Evanator (3mm Cavalier): A lightweight, almost tiny machine pistol capable of suppressing fire. A very reliable magazine system is combined with electronic firing and a high capacity for caseless ammunition. An integral laser sight aids in aiming while a folding stock helps with recoil control. Has the Concealability of a standard Hold-Out Pistol. Shares magazines with the Cavalier Arms Flash. *Caseless Only, Electronic Firing, Folding Stock, Laser Sight.*

Cavalier Arms Flash (3mm Cavalier): Similar to other collapsible guns, the Cavalier Flash has been designed to fold up into a size suitable for a hidden arm slide. A single Interact with Device Action can deploy it from a hidden arm slide and unfold it into a ready to fire weapon; otherwise two Actions are required to unfold and assemble the weapon, but it still requires a Ready Weapon Action

before it can be used. Folding and unfolding this machine pistol can be done while the magazine is loaded and attached, and it may not mount any other accessories or modifications. Shares magazines with the Cavalier Arms Evanator. *Caseless Only, Smartlink.*

Ceska Black Scorpion (.32 Auto): A compact machine pistol with an extendable folding stock to control recoil. Receives +1 Concealability Threshold, which increases to +2 when the stock is folded. *Folding Stock.*

Colt M24 (5.56): Based upon the Colt M22 line of AR platforms, the M24 is an SMG sized 'machine pistol' that is wildly uncontrollable in full auto because it lacks a stock. For an additional 100¥ Colt sells a proprietary 'stabilizing arm-brace'. While equipped, the arm-brace provides +1 to Accuracy and +1 to Recoil Compensation, and allows non-trolls and non-giants to wield the weapon one handed. Treat as a submachine gun for Concealability. Can accept magazines from other Colt M22 and M23 line weapons in 5.56 caliber.

Fichetti Military 100 (4mm Fichetti): The Military 100 offers fully automatic fire in a large pistol frame, with an integrated smartgun system to monitor full diagnostics of the weapon at all times. *Caseless Only, Smartlink.*

Glock 51 (9mm Para): A new full auto capable pistol from Glock, with roots in their classic design. Made of lightweight polymers and ceramics and featuring an integral laser sight. *Ceramic/Plasteel Components Rating 2, Laser Sight.*

HK Urban Combat (7mm Auto): H&K only markets the Urban Combat to select clientele, which keeps the total production numbers low, but the high demand and high price are enough to easily keep it in production. Made entirely of non-metallic components and featuring a unique recoil absorption system from internal hydraulics. The caseless ammunition and electronic firing of the Urban Fighter are retained. Hermetically sealed magazines, functioning the same as the Urban Fighter's magazines, are available for +150¥ each at Availability 16(F). The Urban Combat cannot be further modified aside from Personalized Grips. *Caseless Only, Ceramic/Plasteel Com-*

ponents Rating 6, *Electronic Firing, Smartlink, Sound Suppressor*.

Izom RP-71 (.25 Auto): A small, compact machine pistol developed with the help of Ultimax and geared to handle any environmental conditions, or so the marketing teams would have you believe. Features a collapsible stock and does not suffer the normal Concealability Threshold increase from an extended magazine or extended folding stock. *Extended Magazine, Folding Stock*.

Krime Chatter (.38 Auto): An offering from Krime that is only capable of fully automatic fire in a light pistol cartridge. Comes with standard 20 round magazines and optional 60 round drums for 25¥ each. *Metahuman Adaptation*.

Military Armament Corporation Model 11 (.38 Auto): The MAC-11 is the smaller, little brother of the MAC-10 in a lighter caliber. The high rate of fire allows 12 shots per attack in full-auto mode, but it is quite uncontrollable. Original suppressors, if they can be found, wear out quickly, but provide a +2 to Auditory Perception Thresholds. *Vintage*.

Onotari Arms Equalizer (6.5 CBJ): A small caliber machine pistol with a very high rate of fire. Features a retractable stock and an integral underbarrel laser sight, but lacks iron sights entirely. Receives a -1 modifier to the Difficulty Threshold of Quick Draw attempts as long as no sights or other top-mounted accessories or modifications are present. *Folding Stock, Laser Sight*.

Onotari Arms SIG-6 (.357 SIG): Saeder-Krupp's reintroduction and re-imagining of the classic SIG Sauer MPX chambered in a SIG derived cartridge meant to replicate a .357 Magnum as a rimless, bottlenecked cartridge useable in automatic weapons. When the folding foregrip and retractable stock are not deployed, and using a standard capacity magazine, the SIG-6 is a compact machine pistol easily wielded in one hand. Features an internal smartgun system and barrel mounted gas vents. Receives +2 to Concealability Thresholds unless the foregrip or stock are deployed, or if using an extended magazine. Standard 16 round magazines or extended 32 round magazines are available from the factory at +15¥ each. *Folding Stock, Foregrip, Gas Vent Rating 2, Smartlink*.

PPSK-4 Collapsible Machine Pistol (9mm Gyurza): "Pistolet Pulemjet Sptsialnyj Kemenova", or "Kemenov special submachine gun", is the larger cousin of the PSK-3 Collapsible Pistol. Functionally identical, the PPSK-4 features burst fire capability, a laser sight, and a folding stock to improve upon its predecessor, as well as a

larger magazine. All rules from the PSK-3 apply, and this machine pistol may mount no other accessories or modifications. *Extended Magazine, Folding Stock, Laser Sight*.

Remington Suppressor (.45 Super): While not capable of the rate of fire many machine pistols can boast, nor the magazine capacity, the Remington Suppressor is a highly accurate and easily concealable weapon. Standard equipment includes a detachable sound suppressor. Receives +1 to Concealability Threshold when the suppressor is not attached. *Sound Suppressor*.

Ruger T-983 (9mm Para): A heavy machine pistol more resemblant of a submachine gun and almost as controllable in burst fire thanks to a folding foregrip. An advanced safety system allows the T-983's users to spray fire indiscriminately with the hope that they won't strike a friendly in the process. A 25 round extended magazine is available for +15¥ each. *Advanced Safety (Basic), Foregrip*.

Steyr TMP (9mm Para): The lightweight polymer frame makes the TMP very easily wielded, but accuracy suffers, especially when firing on full auto. *Vintage*.

Ultimax 70 (7.62 Tok): While the stock version of this pistol comes without any advanced electronics, it is still a reliable pistol with above average accuracy and controllable fully automatic fire. *Gas Vent Rating 2, Laser Sight*.

Ultimax 71 (7.62 Tok): A smaller and simpler redesign of the Ultimax 70, the 71 model can function as a regular semi-automatic pistol and comes with an extended magazine as standard, but drops the gas vent system. *Extended Magazine, Laser Sight*.

Walther P118 (7mm Auto): A highly advanced machine pistol from Walther; this gun has everything. The electronics suite includes an internal smartgun system, a biometric safety, and a safe target system. The trigger has been removed and the internals are all electronic paired with caseless ammunition to cut down on moving parts and failure points. An integral gas vent system and an extended magazine round out the extensive list of modifications. *Advanced Safety, Caseless Only, Electronic Firing, Extended Magazine, Gas Vent Rating 2, Safe Target System, Smartlink, Trigger Removal*.

Walther Secura II (10mm Auto): A redesign of Walther's Secura heavy pistol into a machine pistol capable of burst fire. Features an extended magazine in a larger caliber over its predecessor, along with an internal smartgun system and an underbarrel flashlight. *Extended Magazine, Flashlight, Smartlink*.

Submachine Guns - Fully automatic capable, lighter caliber guns that are usually more compact than even the smallest assault rifles. Capable of accepting top-mounted, barrel-mounted, and underbarrel modifications and accessories.

Ares Executive Protector (5mm Ares): A special detachable submachine gun built into a briefcase. Comes with one standard briefcase; additional briefcases may be bought for 300¥ and in customizable designs. While encased in a briefcase, the Executive Protector may be fired with the press of a discrete button, or wirelessly if enabled. When fired from inside the briefcase, all uncompensated recoil is doubled. To break away the briefcase and use the weapon normally a single Interact with Device Action is required. An integral smartgun system is available for +500¥. The Protector also features both a collapsible stock that can be utilized when out of the briefcase and an integral sound suppressor; aside from these it may only mount underbarrel accessories and modifications. A Perception + LOG (3) Test allows others familiar with the Executive Protector's standard briefcase design to notice a hidden example. *Caseless Only, Folding Stock, Sound Suppressor.*

Ares Sigma-3 (5mm Ares): A submachine gun designed for law enforcement with a large capacity drum magazine. While awkward to reload, it provides nearly six full seconds of suppressive fire. The drum magazine consists of 10 cylinders, each containing 5 rounds stacked in-line, which rotate to a new cylinder after each empties; these electronically fired caseless rounds allow bursts of 5 shots each time the trigger is pulled. Includes a collapsible stock, foregrip, and internal smartgun system. *Caseless Only, Electronic Firing, Folding Stock, Foregrip, Smartlink.*

Beretta Model 70 (8mm Auto): An SMG from Beretta with a large ammo capacity, a built in top-mounted laser

sight, and an integral sound suppressor. *Laser Sight, Sound Suppressor.*

Cavalier Arms Gladius (.38 Auto): A cheap, stamped metal construction SMG produced as a low cost alternative to law enforcement. Proprietary 'recoil absorbers' help to keep it stabilized during automatic fire, along with a collapsible stock. A top-mounted housing with a laser sight has extra room for aftermarket modifications. *Extended Magazine, Folding Stock, Laser Sight.*

Cavalier Arms-ParaShield Emergency Responder (3mm CA/darts): A combination lethal and less-than-lethal submachine gun, with the lethal SMG component provided by Cavalier Arms and the underbarrel dartgun supplied by Parashield. An integrated smartgun system and electronic firing allow this system higher levels of accuracy and control whether shooting bullets or darts. Voice commands or manual activation can be used to switch firing modes with an appropriate Action; a wireless bonus allows freely switching. The dart gun includes its own 10 round magazine and an air reservoir to charge 10 shots; a separate Reload Action is required to recharge this reservoir or insert a new air canister. *Caseless Only, Electronic Firing, Smartlink.*

Colt Cobra (6.5 CBJ): A specialized bullpup design from Colt, Trust the Legend, that is heavily represented in mercenary outfits. Features a folding stock, top-mounted laser sight, and a barrel-mounted gas vent system. Cannot mount underbarrel accessories or modifications. *Folding Stock, Gas Vent Rating 2, Laser Sight.*

Colt M24A3 Water Carbine (5.56): A carbine version of Colt's ubiquitous AR platform, Trust the Legend, that makes use of caseless ammunition and a positive pressure chamber fed by a scuba tank or other air source. Firing underwater functions as if you were on dry land, and even magazine changes are covered with a purge valve. When out of the water, it functions normally. *Case-*

less Only, Stock.

Esprit Tsunami (8mm Auto): A security forces designed SMG for the purpose of cutting down on friendly fire incidents. Features a safe target system top-mounted externally and an internal smartgun system, along with a fixed stock. *Caseless Only, Safe Target System, Smartlink, Stock.*

FN P93 Praetor (FN 5.7): Developed by Fabrique Nationale after the '64 Matrix Crash to properly equip the United Nations peacekeeping forces. A bullpup design precludes the use of underbarrel mounted modifications or accessories, but standard issue includes a recoil absorbing design, integrated stock, flashlight (low-light versions available for +100¥), and an optional electronic firing system (+200¥). Cannot be upgraded with an extended magazine, nor any other type of magazine aside from the proprietary 50 round factory issue magazines. *Flashlight, Stock.*

FN P90 (FN 5.7): The precursor of the Praetor, the original P90 uses the same unique cartridge and magazine system, but is much less advanced overall. Features an integral stock and a tactical rail system allowing a top-mount accessory and two side-mounts. Cannot be upgraded with an extended magazine nor any other magazine aside from the factory issue, and cannot mount any underbarrel modifications or accessories. *Stock, Tactical Rail.*

Glock Custodes MPK (7mm Auto): Glock's first foray into the world of submachine guns, the MPK, or MaschinenPistole Kurz, is a short, easily concealable SMG that has a built in gas vent system. An optional detachable stock and sling are available for +75¥. Made with Glock's usual preference for ceramic and plastic materials. Without the optional stock attached, this weapon receives a +1 to Concealability Thresholds. *Ceramic/Plasteel Components Rating 2, Gas Vent Rating 1.*

Glock Custodes MPV (7mm Auto): Glock's MPK in a hidden package, the MPV, or MaschinenPistole Verdeckt, comes with a small briefcase to easily conceal it from view. A smart material sling doubles as the carrying handle of the briefcase until a discreet button press detaches the housing, at which point the sling relaxes. Many bodyguards utilizing this weapon carry the detachable stock separately to attach once the bullets start flying. A single Interact with Device Action is required for both activating the briefcase housing and attaching the stock. Wireless operation allows the briefcase to be activated freely. *Ceramic/Plasteel Components Rating 2, Detachable Stock, Gas Vent Rating 1, Sling.*

HK 223K (5.56): A short carbine version of HK's 223, the 'Kommando' retains the reliability and precision of its larger cousin. The short barrel reduces velocity somewhat, but it is much more compact and concealable with its shorter profile and collapsible stock. Standard issue

includes short 20 round magazines, but it may accept both the standard HK 223 30 round magazines and the 40 round Colt M22 and M23 magazines. A full rail system allows accessories to be mounted on the top, both sides, and underbarrel. *Folding Stock, Tactical Rail.*

HK 227 (7mm Auto): The SMG of choice for corporate and military security forces. Features a retractable stock, integral underbarrel laser sight, and a barrel mounted gas vent system. A popular -S variant trades the gas vent system for an integral suppressor. *Folding Stock, Gas Vent Rating 2, Laser Sight.*

HK 229-X (10mm Auto): A Heckler & Koch design for paramilitaries and mercenaries around the world. Includes an internal smartgun system and a collapsing stock. *Folding Stock, Smartlink.*

HK 247-Arctic (7mm Auto): An arctic warfare version of the HK 227 which removes the stock and replaces the other standard issue upgrades with an internal smartgun system and a suppressed barrel. A larger magazine allows continuous fire without the trouble of trying to reload as often in bulky environmental gear. *Extended Magazine, Extreme Environment Modification (Arctic), Smartlink, Suppressor.*

HK MP5 TX (HK 4.6x30): A compact SMG from Heckler & Koch based upon a century old design. Lighter caliber, but accurate and efficient with the ability to shred body armor. Comes equipped with a folding stock, underbarrel laser sight, and integral suppressor. *Folding Stock, Laser Sight, Sound Suppressor.*

HK MP5SD (9mm Para): The integrally suppressed version of the original MP5 that the TX and 227-S were based upon. Although ancient, it is still a reliable and accurate weapon. Shoddy knock offs produced in Russia are becoming more common. The fixed, integral suppressor is very well designed, imparting a +3 to Auditory Perception Thresholds; when used in conjunction with subsonic ammunition this increases to +5. *Folding Stock, Sound Suppressor, Vintage.*

HK MP7 (HK 4.6x30): H&K's personal defense weapon designed before the turn of the century, and now near extinct since the destruction of the factory during the EuroWars. It features both a collapsible stock and a folding foregrip, as well as a rail system that can mount attachments to the top and sides. The MP7 fires a cartridge that has a very high velocity and very small cross section, making it ideal for penetrating armor. *Folding Stock, Foregrip, Tactical Rail, Vintage.*

HK MP75 (HK 4.6x30): H&K's new SMG design is a direct competitor to the FN P93 Praetor. Designed to expediently eliminate heavily armored threats, the MP75 features a compact, bullpup design mated with an internal smartgun system, a gas vent system, biometric safeties, and a high capacity magazine. *Advanced Safety, Fore-*

grip, Gas Vent Rating 2, Smartlink, Stock.

HK Urban Enforcer (7mm Auto): HK's SMG offering in the 'Urban' family to go along with the Combat and Fighter. Features the same non-metallic construction and sealed magazines to avoid both MAD scanners and chem sniffers. Extra loaded magazines are available for +200¥ at Availability 20(F). As with the other guns in the Urban family, tampering with the magazines or changing the ammo type breaks the seals. The Enforcer has been upgraded, adding to the usual smartgun system, suppressed barrel, and combination of caseless ammunition with electronic firing. It features a biometric safety, trigger removal, foregrip, and an underbarrel micro grenade launcher mated to the integrally suppressed barrel; damage to either requires the replacement of both. Proprietary grenades are available direct from HK for +200¥ each at 20(F) Availability. The Enforcer can accept no further internal or barrel modifications or accessories. *Advanced Safety, Caseless Only, Ceramic/Plasteel Components Rating 6, Electronic Firing, Foregrip, Smartlink, Sound Suppressor, Trigger Removal, Underbarrel Micro Grenade Launcher.*

Ingram Smartgun (5mm Ares): A high-tech favorite of street samurai, the Smartgun features an integral smartgun system, a folding stock, and a gas vent system. *Caseless Only, Folding Stock, Gas Vent Rating 2, Smartlink.*

Ingram SuperMach 100 (5mm Ares): Sacrificing stopping power for sheer rate of fire and magazine capacity, the SuperMach is sometimes referred to as a "high velocity machine gun", which would be a bit of misnomer since it does not fire particularly high velocity rounds. When shooting in burst fire mode, each attack with this weapon fires 6 rounds. When shooting in full-auto mode, it fires 18 shots per attack. Features a folding stock and a unique recoil reduction design. An extended 60 round magazine is available for 25¥ each, but decreases the weapon's Concealability Threshold by 1 and increases the weapon's weight by a quarter kilo. Cannot mount any barrel or underbarrel accessories or modifications. *Caseless Only, Folding Stock.*

Ingram Warrior 10 (9mm Para): One of the most easily modifiable guns on the market and a favorite of mercenary groups who care more about customization than the lack of fully automatic fire.

Izom Aphrodite (8mm Auto): A submachine gun designed for law enforcement that includes an underbarrel grenade launcher that has been shortened so as to not compromise its concealability and compact ease of use. Includes electronic firing and a side folding full stock. Cannot mount underbarrel accessories or modifications. Receives +1 to Concealability Thresholds. *Electronic Firing, Extended Magazine, Folding Stock, Laser Sight, Short Barrel, Underbarrel Grenade Launcher.*

Izom Artemis (8mm Auto): An evolution of the Aphrodite that is even more compact, thanks to the lack of a stock

and an even shorter barrel, and has been designed to require minimal or no training and be useable straight out of the box. The underbarrel grenade launcher has been suitably shortened in barrel length as well, imposing an accuracy and range penalty. Receives +2 to Concealability Thresholds. *Electronic Firing, Extended Magazine, Short Barrel, Underbarrel Grenade Launcher.*

Krime Spree (10mm Auto): A simple, open bolt, blow-back design built to Krime's usual standards with no frills. It lacks accuracy because of sub-standard barrels and rifling, but the efficient design promotes steady recoil absorption which is badly needed since this SMG is only capable of full auto fire. *Metahuman Adaptation.*

Krime Tradition (.45 Auto): Krime's up-sized take on the classic Tommy gun. Capable of accepting 30 round stick mags or 75 round drums. Features a combination gas vent system and compensator to help with both accuracy and recoil reduction. Available in both a skeletonized stock and highly chromed steel edition or a classic wood and blued steel look. Includes a slot in the stock to accept a wide range of commlinks. *Foregrip, Gas Vent Rating 2, Metahuman Adaptation.*

Military Armament Corporation Model 10 (.45 Auto): The MAC-10 is an original design by Gordon Ingram, of Ingram Smartgun fame, from over a century ago. Standard features include a suppressor that actually helps control recoil, providing +1 Accuracy. *Sound Suppressor, Vintage.*

Nemesis Arms Spratley Stalwart (10mm Auto): A unique firing system provides recoil reduction, combined with both electronic firing and a collapsible stock to improve full-auto management. Many components of this gun are made of ceramic and plasteel, providing weight reduction and corrosion resistance. The weight reduction is sorely needed, thanks to a quite large battery pack and a sizeable magazine. *Ceramic/Plasteel Components Rating 2, Electronic Firing, Folding Stock.*

Onotari Arms S-3K (7mm Auto): A submachine gun that folds entirely in half for concealed transport, requiring a single Interact with Device Action to fold or unfold; cannot be fired while folded. When folded, it receives a +3 to Concealability Thresholds. Comes equipped with a folding stock, to be unfolded after the gun itself is unfolded, and an internal smartgun system. *Folding Stock, Smartlink.*

Sandler TMP (9mm para): The cheapest SMG on the market, and one of the oldest in production still. Equipped with a top-mounted laser sight and a folding stock. *Folding Stock, Laser Sight.*

SCK Model 100 (10mm Auto): Shin Chou Kogyo Corporation's Model 100 is the most widely used SMG by Japanese corporate security forces, including Renraku's Red Samurai. It packs a bit more punch than the average SMG and comes with both a folding stock and internal

smartgun system. *Folding Stock, Smartlink.*

Shiawase Arms Tactical Model 71 (6.5 CBJ): A high-tech SMG from Shiawase Arms. Features an integral smartlink and associated safe target system, a folding stock and foregrip for better control, and an electronic firing system paired with caseless ammo. Lightweight polymers and alloys have been strengthened to reduce weight while making the gun near impervious to the environment. *Caseless Only, Electronic Firing, Folding Stock, Foregrip, Melee Hardening, Safe Target System, Smartlink.*

Shiawase Arms Tactical Model 72 (5mm SA): A cheaper 'upgrade' of the Model 71 which sacrifices some features for a larger, more reliable power supply. Issued in a lighter caliber which slightly increases magazine capacity. *Electronic Firing, Folding Stock, Foregrip, Safe Target System, Smartlink.*

Terracotta Arms Mordred (10mm Auto): Intended for security details and undercover operatives, the Mordred is designed to fold up into a nondescript metal box when not in use. Follows the same rules as the PSK or PPSK; requires that the gun not be loaded to do so. Includes a full electronics suite, collapsible stock, and folding foregrip. Often comes with upgraded vision enhancements

to act as a surveillance device, or to even be used as a trideo camera for newsies! *Folding Stock, Foregrip, Safe Target System, Smartlink.*

Type 84B (7.62 Tok): An aging remake of an even older knock off, the Type 84B has minimal features and low capacity, but at least it's cheap and readily available. *Foregrip.*

Uzi III (9mm Para): A descendant of the Israeli Uzi that comes equipped with a folding stock and top-mounted laser sight, manufactured by Fabrique Nationale. *Folding Stock, Laser Sight.*

Uzi IV (9mm Para): An update of the venerable Uzi in the 2060's that increased quality and manufacturing tolerances to produce a superior weapon. *Folding Stock, Laser Sight.*

Uzi V (.45 Auto): Newly produced by the Uzi's new license holder, Spinrad Global, the Uzi V is a departure from previous models. It features a fixed stock, internal smartgun system, and a suppressed barrel. A larger, heavier hitting caliber completes the new Uzi, keeping the same magazine capacity with a slight increase in overall size of the magazine. *Smartlink, Sound Suppressor, Stock.*

Shotguns - Firearms that usually fire shot shells or flechettes with the use of a choke, but can also fire solid slugs and may even be rifled with the intent of primarily using slugs. Can take top-mounted, barrel-mounted, and underbarrel accessories and modifications. Damage codes are for solid shot or slug ammunition unless otherwise noted.

Altmayr SP (12ga): A simple pump action shotgun from Altmayr that was built from the ground up to be compact and concealable with a short pistol grip and a short barrel. Receives +3 to Concealability Thresholds. *Short Barrel, Vintage.*

Altmayr SPX (12ga): A completely mechanical, easily

concealed pump shotgun that more resembles a large heavy pistol in size. Receives +2 to Concealability Thresholds.

Altmayr SPX2 (12ga): An upgrade of Altmayr's SPX which doubles the ammo capacity with side by side tubular magazines. Pistol grip angle changes for better ergonomics are accompanied by internal servos that automatically work the pump action between shots. The SPX2 has a +2 to Concealability Thresholds. *Pump Action (Optional).*

Auto-Assault 16 (12ga Mag): The latest in the AA line of fully automatic shotguns and a favorite of mercenaries and militaries everywhere. Nicknamed "The Warhammer"

and capable of intense short range firepower. Features internal mechanisms to absorb recoil and optional high capacity drum mags, available for an extra +20¥ each, that store 32 shells over the ordinary stick magazine's 10 shells. *Stock*.

Ranger Arms Auto-Assault 16 (12ga Mag): Ranger Arms bought the license to the AA-16, made a few tweaks, and proceeded to sell them like hotcakes. Backordered out to a few years and unable to keep up with demand, the Ranger Arms version of this shotgun adds a foregrip, an internal smartgun system, and crams two more shells into the magazine. *Foregrip (Underbarrel), Smartlink, Stock*.

Beretta Northstar (12ga Mag): An innovative dual magazine design allows this shotgun to feed from either of its two tubular magazines. An internal smartgun system with ammo skip allows the user to manually or wirelessly switch from one magazine to the other and choose which is loaded between each shot. *Ammo Skip System, Smartlink, Stock*.

Blunderbuss (various): A jury-rigged shotgun built on the streets that fires whatever you can cram into the barrel, usually rocks or broken glass. Black powder cubes are available for +10¥ per box of 10, requiring 1 for each shot. *Stock*.

Boyd & Richards Desperado (12ga): A throwback to western style and the guns of the Wild West. B&R produce a limited run of these lever action shotguns each year. For the right price, one can be made with any exotic wood or the custom inlays and engraving only a Corp. elite could appreciate. For lesser mortals, a normal hardwood and blued steel shotgun may still break the bank. *Stock, Vintage*.

Cavalier Arms Falchion (12ga): A pump-action shotgun designed to accompany Cavalier's Sheriff revolver. The internal smartgun system, advanced safety system, and removal of the trigger are designed for linking with your PAN and preventing any unauthorized users from turning the weapon against you. *Advanced Safety, Melee Hardening, Smartlink, Stock, Trigger Removal*.

Cavalier Arms Lancer (12ga Mag): The Lancer is a semi-automatic shotgun with an underslung grenade launcher that Cavalier has offered to law enforcement. Cavalier claims it is the ultimate breaching tool available. An advanced and highly ergonomic stock, along with a deployable two pronged bipod underneath the grenade launcher, allow the Lancer to be utilized in a fixed role for fire support. Other features include substantial reinforcement of most components to sustain shocks in combat and the use of a tubular magazine above the barrel as opposed to the normal underbarrel magazines of most shotguns. *Bipod (Underbarrel), Grenade Launcher (Underbarrel), Melee Hardening, Stock*.

Colt MS-27 (12ga): Continuing to milk their AR platform

for all its worth, the MS-27 is a redesign of the Colt M23 into an assault shotgun. Approximately the same size and weight as the M23, and utilizes identical controls. Accepts standard 12 gauge shells and is capable of fully automatic fire. No frills or upgrades come with the base model to lower cost. Includes a full rail system to mount any accessories its user could desire. *Stock, Tactical Rail (Top, Sides, Underbarrel)*.

Defiance T-250 (12ga Mag): A very common shotgun on the streets. Capable of both gas-operated, semi-automatic fire normally, and pump action when trying to clear jams or avoid them. *Pump Action (Optional), Stock*.

Short Barrel Defiance T-250 (12ga Mag): A short barreled version of the T-250 that is less effective at range, decreases the magazine capacity, but becomes more easily concealed. Increase Concealability Threshold by 2. *Pump Action (Optional), Short Barrel, Stock*.

Defiance T-280 (20ga): A development of the T-250 that uses lighter shells to increase ammunition capacity and recoil control. *Pump Action (Optional), Stock*.

Defiance T-285 (20ga): What started as a joke on a bar napkin eventually turned into a real design. The T-285 is essentially three sawed off T-285 barrels welded into a triangle pattern and fitted to a break action, pistol gripped shotgun. A mechanical switch is used to select whether 1, 2, or all 3 barrels are fired with a trigger pull. *Vintage*.

Enfield AS-7 (12ga Mag): A burst fire capable assault shotgun that normally comes with a 10 round magazine but may accept specialized 24 round drums. Comes with an top-mounted laser sight. *Laser Sight (Top), Stock*.

Franchi SPAS-22 (12g): A dangerous shotgun capable of burst firing, it may also function in both semi-automatic or pump action modes. Comes equipped with a folding stock and internal smartlink. Increase Concealability Threshold by 2 when the stock is folded. *Folding Stock, Pump Action (Optional), Smartlink*.

Franchi SPAS-24 (12g): An upgrade of the SPAS-22 that trades the folding stock for a fixed rigid stock with a shock pad. It also includes a flashlight built into the forestock. *Flashlight, Pump Action (Optional), Shock Pad, Smartlink, Stock*.

Franchi SPAS-25 (12g): A blend of both prior models, the SPAS-25 features the folding stock of the -22, the shock pad and integrated flashlight of the -24, and adds its own new twist: breaching teeth on the muzzle to properly seat the barrel against doors or locks. Increase Concealability Threshold by 2 when the stock is folded. *Flashlight, Folding Stock, Pump Action (Optional), Shock Pad, Smartlink*.

Izom CSM-419 (12ga Mag): Izom's law enforcement marketed, high capacity, advanced shotgun system. Resembling a SMG more than a traditional shotgun and built

around Izom's 'Compact Carry' magazines that serve a double function as part of the structure of the weapon, the CSM-419 was precariously designed as a shotgun stuffed to the gills with high tech electronics, yet Izom advertises that the recoil operated action renders it immune to technomancers. A top-mounted rail system comes pre-installed with a combined smartgun system and sight enhancing scope; this is joined by an electronic safety, safe target system, and ammo skip capability. The lack of a stock and a below average barrel length contribute to a compact, easily hidden weapon that can be wielded one handed by a stronger metahuman; receives +1 to Concealability Thresholds. *Advanced Safety (Basic), Ammo Skip System, Imaging Scope (Top, Vision Enhancement 1), Safe Target System, Smartlink, Tactical Rail (Top).*

Izom SS-374 (12ga): Izom's redesign of the classic pump shotgun incorporates several electronic upgrades and multiple conveniences. Digital safety locks and electronic firing are combined with an automated, piston driven pump, which can still be used manually in a pinch. The side loading magazine tube can be switched to use either side as the loading point, while the ejection port is directly above, allowing full ambidextrous use. A top mounted rail system can accept any accessory, and the short barrel and pistol grip make this a very compact shotgun, providing a +2 to Concealability Thresholds. *Advanced Safety (Basic), Electronic Firing, Pump Action (Optional), Short Barrel, Tactical Rail (Top).*

Krime Boss (12ga Mag): A drum fed, semi-automatic shogun from Krime. The heavy frame excels at absorbing recoil but it is a weapon whose accuracy could be improved. *Metahuman Adaptation, Stock.*

Krime Ditch Combination Gun (.30-30 Win/12ga): An over-under break action longarm that combines a rifle in the top barrel and a shotgun in the lower barrel. Capable of accepting both cased and caseless rounds. An optional folding stock with a built in ammo pouch is available for +100¥. *Metahuman Adaptation, Stock.*

Krime Stopper II (12ga): Krime's redesign of the Stopper has turned it into an over-under break action shotgun in a slightly larger and more wieldable form. Retains the 5 shell storage underneath the barrels and cannot mount underbarrel accessories without further modification. The Krime Stopper II receives a +2 to Concealability Thresholds. Optional variants offered by Krime include the Shopkeeper, which adds a folding shoulder brace and retains the Concealability modifier when folded, and the Homeguard, which has a thumbhole stock that includes storage space for an extra 5 shells and features an longer barrel than either the base model or the Shopkeeper. All models can fire both barrels simultaneously as a Burst. *Ammo Storage (Underbarrel), Metahuman Adaptation, Short Barrel.*

Krime Whammy (8ga): An unorthodox creation from

Krime that mates 4 cylinders that hold oversized shotgun shells to the business end of a massive warhammer. Normally the head of the club must come in contact with a barrier, or a body, to engage and fire one or all of the contained shells. It is possible to fire at very short ranges if you can find the right angle; Old Man Krime recommends engaging all 4 shells and loading buckshot or flechettes to increase the chance of actually hitting the target. Wire-less Bonus: fire remotely, and set the club to fire 1 or all 4 shells when it strikes a target, which would otherwise have to be set by a manual switch. *Melee Hardening, Metahuman Adaptation, Shock Pad.*

Mossberg AM-CMDT (12ga Mag): A new iteration of the CMDT that boasts increased accuracy thanks to an internal smartgun system. While accurate, low ammo capacity limits its burst fire and automatic modes. *Foregrip (Underbarrel), Smartlink, Stock.*

Onotari Arms Pressure KS-X (12ga): A compact, sub-machine gun sized shotgun capable of burst fire that includes an extending stock and a built in laser sight. A revolutionary suppressor is available from Onotari Arms for +900¥ at Availability 14(R). Lacks ammo capacity but has a top rail to accommodate most accessories. Without the suppressor equipped or the stock extended, the Pressure KS-X receives a +2 to Concealability Thresholds. *Folding Stock, Laser Sight, Tactical Rail (Top).*

PJSS Model 55 (12ga): A finely crafted, break action, double barrel hunting and sporting shotgun favored by European hunters and trap shooters. The over-under double barrels can be fired simultaneously via Burst Fire. *Shock Pad, Stock.*

PJSS Model 75 (various): An improvement over their Model 55, the Suhl Hunting & Sporting Weapons Production Association's Model 75 is a side-by-side shotgun of exceptional workmanship and quality. Old world craftsmanship meets modern materials, from the customized and reinforced old growth stocks with nearly invisible shock absorbers to the cheek piece inserts of anti-bacterial artificial leather made from mushroom caps. The high level of accuracy and robust design are combined with modern barrels capable of changing calibers with the use of insert sleeves. Additional barrels in a caliber of your choice are available for +400¥ each. Each barrel has its own set trigger, allowing one or both to be fired with a simple pull; this is not treated as a burst but as two separate shots. An optional thermal targeting system can be attached to the forearm of the stock for +900¥ which can display a wide view display of the sight picture's thermal signatures directly to your AR feed if wirelessly enabled; treat as a thermal imaging scope. While the caliber of the barrels may be customized on this weapon, both must shoot the same cartridge. *Shock Pad, Stock.*

PJSS Model 75-III (various): A three barrelled drilling; essentially the Model 75 with a third, higher caliber bar-

rel beneath the normal side-by-side barrels. One of the triggers is set to control this third barrel, while the other pulls double duty with both of the top barrels. Commonly this arrangement is composed of a rifle barrel below and two shotgun barrels above, allowing this weapon to be used as both a big game sporting rifle and a fowling gun. When shooting the Model 75-III both upper barrels may be fired with a single trigger pull which is not treated as a burst but as two separate shots. As with the basic Model 75, both upper barrels may be customized but both must be the same caliber. The lower barrel does not have to be the same caliber, but if it is then all 3 may be fired simultaneously as 3 separate shots by pulling both triggers. The trigger that controls the two upper barrels may be manually or wirelessly set to fire one or both barrels when engaged, and if only one you may also set which fires first and which fires second on the next pull. *Shock Pad, Stock.*

Remington 900 (12ga): A rugged and dependable pump action shotgun continuously produced for over 70 years. *Stock.*

Sawed Off Remington 900 (12ga): The sawed off, short barrel version of the Remington 900 lowers accuracy, damage, and magazine capacity but increases Concealability Thresholds by 2. *Short Barrel, Stock.*

Remington 990 (12ga): Almost in production as long as the 900 model, Remington's 990 is a similar shotgun that trades the pump action of its predecessor for smooth semi-automatic fire. A rail system on the top and under-barrel allows for easy customization. *Stock, Tactical Rail (Top, Underbarrel).*

Shiawase Arms Rain (20ga): A shotgun marketed at civilians and home defense with some interesting design choices. The Rain contains no magazine tube nor has a detachable mag, instead utilizing the 'metal storm' concept of stacking the shells in-line inside the barrel, requiring a full barrel change to reload. Features a retractable stock and a digital ammo counter. Extra barrels

pre-loaded with shells appropriate to your particular locale are available for +100¥ each. *Caseless Only, Electronic Firing, Folding Stock.*

Shiawase Arms Riot Guard (12ga): A magazine fed, bullpup, gas operated shotgun from Shiawase. The re-inforced, compact frame provides +1 to Concealability Thresholds. *Foregrip (Underbarrel), Melee Hardening, Shock Pad, Stock.*

Shiawase Arms Tsunami (.410 bore): A bare bones shotgun with a high magazine capacity that has garnered a Recommended status from law enforcement agencies worldwide. Intended as a home defense gun, much like Shiawase's Rain but much simpler in construction and operation, the Tsunami features an enlarged trigger guard to accept a trigger lock when not in use and the only electronic component on the entire weapon is a series of RFID tags, ostensibly for a theft tracking system. *Stock.*

Winchester Model 201 (20ga): A quality over-under, double barrel shotgun favored by the wealthy. Lighter shells than a common combat shotgun, but well designed for target shooting and fowling. Exceptionally fine craftsmanship and dozens of patterns available in the custom wood engraving and checkering. Both barrels may be fired as a burst, the same as the PJSS Model 55. *Custom Look, Stock.*

Winchester Model 2054 (12ga Mag): A combat shotgun originally marketed the Ute Nation military and police. Features a retractable stock, foregrip, top-mounted laser sight, and easily upgraded to accept a smartlink and other electronics. *Folding Stock, Foregrip (Underbarrel), Laser Sight (Top), Stock.*

Winchester Model 2066 (12ga Mag): A modern development of a classic Winchester shotgun from two centuries past. High tensile steel, strengthened internal parts, and more combine into a truly modern classic capable of accepting longer magnum shells and even custom handloads. *Stock.*

2066										

Sporting Rifles & Sniper Rifles - Sporting rifles are typically high caliber full length rifles designed for hunting big game. Sniper rifles are essentially the same, but their primary use is to hunt “the most dangerous game”. Both are similar enough to warrant their listing in the same section, as often there are minor differences, if any, between them other than their intended use. Can accept top-mounted, barrel, and underbarrel accessories and modifications.

Ares Canadian Sporter (.22 LR): An ergonomic rifle design from Ares for the civilian market. The Canadian Sporter features a forgrip, tactical rail system, and a top-mounted imaging scope. Designed primarily for education and entertainment, a larger caliber hunting variant is available. *Foregrip, Imaging Scope (Top Rail, Vision Magnification), Stock, Tactical Rail (Top, Sides).*

Ares Desert Strike (.338 LM): This sniper rifle was designed to be incredibly sturdy in harsh conditions; it features reliable components and was built without technologies prone to failure. Highly accurate and deadly at great distances, the Desert Strike comes equipped with a shock pad and a quick detach scope. *Extreme Environmental Modification (Arid), Heavy Barrel, Imaging Scope (Top,*

Vision Magnification), Long Barrel, Shock Pad, Stock.

Barrett Model 121 (.50 BMG): A bullpup anti-material rifle with an integrally suppressed barrel, a folding bipod, and semi-automatic capability. The Barrett fires one of the oldest modern cartridges still in use, but it is also one of the largest, hardest hitting bullets available; better designed for taking out a light armored vehicle or disabling an engine block than targeting a metahuman. The internal smartgun system comes loaded with profiles for every imaginable round this beast can fire, but it requires a sensor system or some form of scope to function correctly. Barrett offers packages including the rifle and a variety of scopes, but the base model ships without one, even lacking iron sights, although the rifle comes equipped with a mounting rail to accept any desired sighting devices. *Bipod (Underbarrel), Long Barrel, Smartlink, Sound Suppressor, Stock, Tactical Rail (Top).*

Barrett Model 122 (.50 BMG): A recent improvement upon the previous design, the Barrett 122 includes all of the features of the 121, but adds a heavier barrel for improved stability, a larger standard magazine capacity, and a shock pad to help with the tremendous recoil. *Bi-*

pod (Underbarrel), Heavy Barrel, Long Barrel, Shock Pad, Smartlink, Sound Suppressor, Stock, Tactical Rail (Top).

Blaser R11 Conqueror (.308): "Bigger Critters need Bigger Calibers!" is the slogan for Blaser's R11 Conqueror. Based off the legendary R8 model, the R11 features an assortment of upgrades. The entire rifle is made from lightweight, high strength carbon composite materials coated with a protective nano-layer to prevent any sort of environmental degradation. Despite the light weight the Conqueror is a light recoiling rifle thanks to the even distribution of mass along its full barrel length and the ergonomic thumbhole stock and its kick-stop recoil absorption system. The entire weapon can be easily disassembled in seconds for maintenance, and it comes equipped with an integral smartgun system, suppressed barrel, and a Schmidt & Bender telescopic sight. *Easy Breakdown, Optical Scope (Top), Shock Pad, Smartlink, Sound Suppressor, Stock.*

Cavalier Arms Crockett EBR (6.5 Creedmoor): The Crockett is an Enhanced Battle Rifle straddling the line between traditional sniper rifles and full auto capable assault rifles. It fires a highly accurate cartridge, if a bit smaller and anemic compared to most other true sniper rifles, and has the capability to fire controllable bursts. This fluidity between roles is the most attractive part of the design. Includes a quick detach imaging scope and a shock pad. *Imaging Scope (Top, Vision Enhancement 2), Shock Pad, Stock.*

HK PSG Enforcer (.308): Designed for counter-terrorism (ie. shadowrunners) and the most widely used weapon of its class with law enforcement worldwide, H&K's Enforcer is the corporation's premiere sniper rifle. Features a detachable top-mounted imaging scope, underbarrel folding bipod, and two side by side detachable magazines for increased capacity and the ability to select the right ammunition for each precision shot. *Additional Magazine, Bipod (Underbarrel), Imaging Scope (Top, Vision Enhancement 2, Vision Magnification), Stock.*

Mannlicher Dirmingen SX BD (12ga/9.3x74R/.22 LR): A combination drilling with three completely different barrels. A break action design with side-by-side barrels above for a shotgun and large bore rifle while a small caliber rifle barrel lies below, fed by a small detachable magazine. *Folding Stock.*

Mannlicher Marpingen Pro D (various): An unorthodox drilling design that combines a classic side-by-side double barrel break action above with the third lower barrel functioning as a recoil-operated semi-automatic fed from a tubular magazine. While capable of firing flechettes and standard shot, the side-by-side upper barrels are usually rifled and intended to fire large caliber slugs. Manual or wireless activation can be used to select which barrel is fired with each trigger pull. The upper barrels may be fired simultaneously; treat as two separate shots instead

of a burst. Manually setting the rifle's function requires an Interact with Device Action. The Marpingen Pro D is available in an elegant carbon black finish or a stylish camouflage pattern. The 8 gauge shotgun barrels are not capable of firing flechette or shot, only slugs. *Rifled Barrels, Shock Pad, Stock.*

Mannlicher Wildhüter (8x57): A bolt-action rifle from Mannlicher that comes with a 25 year service warranty. Features a top-mounted imaging scope and a shock pad integrated seamlessly into the walnut stock. *Imaging Scope (Top, Vision Enhancement 1, Vision Magnification), Shock Pad, Stock.*

Marlin 3041 BL (.44 Mag): Marlin's classic rifle, made with modern anti-corrosion treatments and a reengineered lever action. Comes with a top-mounted imaging scope. *Imaging Scope (Top, Vision Magnification), Stock.*

Marlin 3468SS (.45-70 Government): A modern big-bore rifle that makes use of a lightweight, durable polymer frame and an improved double-link system for a smooth lever action. Capable of putting down any North American big game, whether Awakened or not. *Stock, Vintage.*

Marlin 79S (.22 LR): A small bore, easily maintained plinking rifle that Marlin uses to support youth shooting and education programs, subsidized by the Civilian Marksmanship Program and the UCAS government, of course. *Folding Stock.*

Marlin M-58 (various): A sporting rifle popular across the globe for small to medium sized game. Available in a number of finishes and calibers to suit the user. Comes with an attachable stock, imaging scope, and laser sight. *Folding Stock, Imaging Scope (Top, Vision Enhancement 2), Laser Sight (Underbarrel).*

Marlin X71 (.30-06): A modern sporting rifle designed to function in any cold weather environment of North America. The X71 has a reliable bolt action, an external ammunition counter, and comes with a top-mounted imaging scope full of enhancements. *Extreme Environmental Modification (Arctic), Imaging Scope (Top, Low-Light, Vision Enhancement 1, Vision Magnification), Stock.*

Onotari Arms Rhino Hunter (14.5x114): A first of its kind; a rifle designed for the metahuman sportsman. The Rhino hunter is popular across the African continent as a big game rifle capable of handling even Awakened creatures. The ergonomics are wonderful and it comes pre-installed with a proprietary scope to ensure accurate long-range performance. *Imaging Scope (Top, Vision Enhancement 1, Vision Magnification), Metahuman Adaptation, Stock.*

Onotari Arms Sierra Libra (9.3x74R): A compact, high caliber sporting rifle intended for competition shooting and big game safaris. Features a collapsible stock, foregrip, and a piston driven gas system to reduce recoil. Comes pre-drilled for the user's choice of sighting upgrades. The

internal magazine is hermetically sealed to prevent moisture or dust from interfering with its function. Receives a +1 to Concealability Thresholds beyond normal. *Folding Stock, Foregrip, Tactical Rail (Top)*.

Pioneer 60 (.300 Win Mag): A simple, uncomplicated rifle from Morgan Boone and the Kentucky Long Rifle Company that favors classic lines with modern functionality. The very long barrel and stock, with its signature angle and highly curved, cupped buttplate, have been mated with a tubular magazine and a feed system manipulated by cocking the hammer. Not available for sale in the NAN. *Long Barrel, Stock, Vintage*.

Ranger Arms SM-3 (.308): A highly accurate assassin's weapon that comes equipped with an integral gas vent system, a top-mounted imaging scope with buyer's choice of thermal or low light enhancements, and a shock pad integrated into the stock. The SM-3 can be easily broken down to fit inside a standard briefcase; to assemble or disassemble the weapon requires a successful Firearms + LOG (6, 1 Combat Turn) Extended Test. Precision accuracy comes at a price though, as the SM-3 is easily bumped and jarred out of alignment when not handled carefully. Every Combat Round spent moving quickly, running, jumping, traversing obstacles, etc. incurs a cumulative -1 penalty to the weapon's Accuracy, to a minimum of 3. If used in a melee attack on offense or defense, the Accuracy immediately drops to 3. Recalibrating the rifle requires spending at least 1 hour of work, at GM discretion it may need to be test fired at range in order to do this correctly. *Easy Breakdown, Gas Vent Rating 2, Imaging Scope (Top, Low-Light or Thermal), Shock Pad, Stock*.

Ranger Arms SM-4 (.308): The SM-4 model of Ranger Arms' precision rifle trades the integral gas vent system for a suppressor, making it more ideal in its role of a silent assassin. Retains all other features of the SM-3, including the quick breakdown and fragile temperament. *Easy Breakdown, Imaging Scope (Top, Low-Light or Thermal), Shock Pad, Sound Suppressor, Stock*.

Ranger Arms SM-5 (.416): A departure from the standard caliber of the SM series, the SM-5 model is chambered in a necked down version of what would normally be used as an anti-material round. It retains hypersonic velocities and immense kinetic energy at extended ranges while maintaining the high standard of accuracy the SM series demands. The SM-5 model has nearly all the same features of its predecessor, the SM-4, including the quick breakdown and fragile temperament, but lacks the integral suppressor. Due to the powerful ammunition this rifle fires while being built on the same frame as the other rifles of the SM series, each shot generates 1 extra Recoil. *Easy Breakdown, Imaging Scope (Top, Low-Light or Thermal), Shock Pad, Stock*.

Ranger Arms SM-6 (.308): The newest variant in this line

of deadly rifles is the most precise of them all thanks to its integral smartgun system. Ranger Arms managed to suitably reinforce this version of the rifle with stronger materials; it may be used normally without fear of damaging the fragile components. Retains the easy breakdown and other features of the line, including the suppressor. *Easy Breakdown, Imaging Scope (Top, Low-Light or Thermal), Shock Pad, Sound Suppressor, Stock*.

Remington 750 (5.56): A medium powered bolt-action hunting rifle that features classic wood furniture and a top-mounted imaging scope. May not mount underbarrel accessories. *Imaging Scope (Top, Vision Magnification), Stock*.

Remington 950 (.30-06): A high powered bolt-action hunting rifle that features classic wood furniture and a top-mounted imaging scope. May not mount underbarrel accessories. *Imaging Scope (Top, Vision Magnification), Stock*.

Ruger 100 (.308): A classic sporting rifle from Ruger that has remained popular for decades due to its reliability and simple design. Features a top-mounted imaging scope. *Imaging Scope (Top, Vision Magnification), Stock*.

Ruger 101 (.308): A gas-operated sporting rifle that features a built in imaging scope and a shock pad on the stock. *Imaging Scope (Vision Enhancement 1), Shock Pad, Stock*.

Shiawase Arms Carp Hunter (9mm Para): A civilian firearm all the way with broad appeal and a wide market share. The Carp Hunter is a carbine firing a cartridge more suited to light pistols. It features an ergonomic design with a shock pad, a flash suppressor, and lightweight materials with a polymer coating that resists most environmental conditions. *Flash Suppressor (Barrel), Shock Pad, Stock*.

Shiawase Arms Police Response (7mm Nemesis): A light sniper rifle that is hard hitting without being overly penetrative, combined with a large magazine for suppression fire when needed. The mostly ceramic components provide ideal weight reduction, while the underbarrel rail system gives tactical flexibility. Includes a top-mounted imaging scope, flash suppressor, and a cleaning kit stored in the stock. *Ceramic/Plasteel Components Rating 2, Flash Suppressor (Barrel), Imaging Scope (Top, Vision Enhancement 1, Vision Magnification), Stock, Tactical Rail (Underbarrel)*.

Shiawase Arms Tactical Model 69 (13mm SA): An overly lengthy, yet lightweight anti-material rifle from Shiawase. Comes complete with a full electronics suite, including a built in commlink in the stock (Shiawase Electronics Fatal Light), an antenna running the length of the rifle that can boost the weapon's wireless signal to 40km distant, batteries sufficient to power all electronics for 3 days continuously, and an integrated smartgun system.

The Tactical Model 69 fires 13mm caseless rounds via electronic priming and features lightweight construction with a bipod, a detachable 10 round magazine, mounting for user's choice of optics, and a suppressor. A complete package for electronic warfare in the sniping, counter-sniping, and anti-material roles. *Bipod (Underbarrel), Caseless Only, Electronic Firing, Integrated Commlink (Shiawase Electronics Fatal Light), Long Barrel, Smartlink, Sound Suppressor, Stock, Tactical Rail (Top)*.

Springfield 2003 (.30-06): A 100 year anniversary remake of a classic rifle, which is now nearly 80 years old itself and has been out of production for 40 years, the Springfield 2003 is still commonly found in rural areas of the UCAS and CAS. The level of precision and tight manufacturing tolerances in this design are almost unprecedented, and the wooden stock has been replaced with a lightweight, wireframe composite. The Springfield 2003 may mount no external upgrades aside from the top and underbarrel rail locations. *Cased Only, Stock, Tactical Rail (Top, Underbarrel), Vintage*.

Springfield M1A (.308): Evolved from a classic design, this new iteration of the Springfield's M1A is from an overseas manufacturer and has been updated with modern manufacturing techniques and includes a high tech scope from the factory. *Imaging Scope (Top, Image Link, Vision Enhancement 1, Vision Magnification), Stock*.

Springfield M1 Garand (.30-06): Newly manufactured reproductions, from the same overseas maker as the modernized M1A. Original tooling and construction methods used where possible. Originals go for 10x the price when found. *Stock, Vintage*.

Springfield Model 1855 Reproduction (.58): A reproduction of a centuries old weapon that Springfield has licensed to multiple small manufacturers across North America. The Model 1855 is most often found with re-enactors and primarily those within the CAS. *Stock, Vintage*.

Steyr Minotaur Anti-Material Rifle (14.5x114): A bolt-action rifle that only a Troll could wield, the Minotaur could probably take one down with a single shot as well. Designed to compete against the Barrett rifles, the Minotaur manages to exceed their performance for destructive power. Features an integrated smartgun system with safe target options, a folding heavy bipod, tactical rails, a built-in gas vent system, a flash suppressor, and an advanced safety system. *Advanced Safety (Basic), Bipod (Underbarrel), Flash Suppressor (Barrel), Gas Vent Rating 1, Imaging Scope (Top Rail, Image Link, Thermographic), Metahuman Adaptation, Safe Target System, Smartlink, Stock, Tactical Rail (Top, Underbarrel)*.

Terracotta Arms AM-47 (.300 UM): A large and advanced sniper rifle, intended for larger metahumans. Equipped with an internal smartgun system with safe target and an integrated imaging scope full of high tech goodies, the AM-47's inherent accuracy, electronics, and extended barrel ensure it will hit its target without fail. The heavy weight of this firing platform combined with an adjustable stock, auto-sliding underbarrel weight, and bipod allow sustained fire without any recoil affecting follow up shots. The large capacity drum magazine ensures more than enough ammo in even target rich environments, and its compact design allows the AM-47's operator to take up a prone firing position and still reload with ease. *Bipod (Underbarrel), Imaging Scope (Image Link, Low-Light, Vision Magnification), Long Barrel, Metahuman Adaptation, Safe Target System, Smartlink, Stock, Underbarrel Weight*.

Terracotta Arms Caravan (5.56): A sporting rifle designed for hunting and home defense, but equally suitable as a poor man's sniper rifle. The Caravan features a recoil absorbing stock, a tactical rail with an electronic magnification scope, and a thermal suppressor thanks to the interest of law enforcement and security. *Imaging Scope (Top Rail, Vision Magnification), Shock Pad, Stock, Tactical Rail (Top)*.

Walther MA-2100 (.30-06): The official sniper rifle of the CAS. Built to military specifications with a robust frame able to take a beating and includes an internal smartgun system and a shock pad. The bullpup design gives the Walther a longer barrel than similarly sized rifles, providing a perfect platform for long ranged sniping. Standard models ship without optics, but the design is readily able to upgrade to any desired scope. *Long Barrel, Shock Pad, Smartlink*.

Winchester Model 2024 (.30-30): A classic lever action rebuilt with modern materials, including polymer coating in the barrel to make maintenance a breeze and titanium alloys to strengthen the parts most likely to fail. May not mount any accessories in the Barrel or Underbarrel slots. *Cased Only, Imaging Scope (Top, Vision Magnification), Stock, Vintage*.

Winchester Model 2067 (Various): An updated, reengineered classic to handle modern propellants and chamber pressures, but otherwise constructed no differently than many of Winchester's lever guns from centuries past. Multiple sub-models available in a variety of calibers. Features a top-mounted rail system to add your choice of improvements to the base iron sights. *Stock, Tactical Rail (Top), Vintage*.

Assault Rifles - Assault rifles are the standard infantry weapon of the modern battlefield, offering a balance of range, accuracy, and fully automatic fire capability. They may accept top-mounted, barrel-mounted, and underbarrel accessories.

AK-74 (5.45): The classic AK-47 made lighter, and in a lighter caliber, but otherwise not much different than iterations of the design. This venerable assault rifle was given a new lease on life when a manufacturer in Baghdad licensed production during and after the Euro Wars. An underbarrel attachment point is most commonly used to mount a grenade launcher. *Bayonet Mount, Stock, Tactical Rail (Underbarrel), Vintage*.

AK-97 (7.62 Soviet): One of the most common and proliferate assault rifles in the world. The AK-97 has the durability and reliability to function in almost any condition, even after years without maintenance or in poor storage. *Stock*.

AK-97 Carbine (7.62 Soviet): A short-barrelled AK97 with a folding stock. *Folding Stock*.

AK-98 (7.62 Soviet): Identical to the AK-97 but incorporates an underbarrel mini grenade launcher. *Minigrenade*

Launcher (Underbarrel), Stock.

AK-112 (5.56): An AK platform rifle developed during the latter part of the Euro Wars. The AK-112 was designed to use captured stocks of ammunition, meaning it makes use of STANAG magazines and the ubiquitous 5.56 NATO cartridge. Features an imaging scope and bipod on standard models. *Bipod (Underbarrel), Imaging Scope (Top, Vision Magnification), Stock, Vintage*.

AN-74 (5.45): A modern revamping of an ancient Kalashnikov platform, the AN-74 features unique recoil-reduction measures that allow it to fire two rounds before recoil affects the weapon's accuracy. Originally marketed to the national forces of Turkestan and prototype tested in the 2072 Season of Desert Wars, this rifle has extensive modifications for functioning in harsh, sandy, arid environments. Includes a holographic sight, bayonet mount, and both above and below barrel rails for quickly adapting with accessories. *Bayonet Mount, Holographic Sight (Top), Stock, Tactical Rail (Top, Underbarrel)*.

AN-94 (5.45): The original 2-shot burst rifle that the AN-74 was based on, the AN-94 is still found in portions of the Soviet territories. It has been adapted for cold

weather, has the same recoil-reduction measures of the AN-74, and features both a bayonet mount and, usually, an underbarrel grenade launcher. *Bayonet Mount, Extreme Environmental Modification (Arctic), Minigrenade Launcher (Underbarrel), Stock, Vintage.*

Ares Alpha (6mm Ares): The rifle that Ares has staked its brand name on just as much, if not more so, than the Predator heavy pistol. This assault rifle and its underslung grenade launcher feature a unique design that provides 2 points of Recoil Compensation. Includes an integrated internal smartgun system. *Caseless Only, Grenade Launcher (Underbarrel), Smartlink, Stock.*

Ares Arctic Rifle (6mm Ares): An electronically primed variant of the Ares Alpha built for cold weather use. The trigger guard has been removed to facilitate use with bulky winter clothing. *Caseless Only, Electronic Firing, Extreme Environmental Modification (Arctic), Grenade Launcher (Underbarrel), Smartlink, Stock.*

Ares HVAR (6mm Ares): Ares patented “Hyper Velocity” assault rifle is a specialized rifle designed to produce a rate of fire most other rifles couldn’t hope to match. Combined with an ingenious recoil reduction system, the HVAR is capable of laying down an accurate hail of suppressive fire. Includes a shock pad on the rigid stock and an integral smartgun system. The HVAR cannot accept barrel or underbarrel accessories or modifications, as they would interfere with the specialized systems for reducing recoil and heat. When firing, the HVAR uses 6 rounds of ammunition for bursts, and 18 for full auto fire. *Shock Pad, Smartlink, Stock.*

Ares Stalwart (5.56): The Stalwart is an attempt by Ares to expand into the cheap, widely available market of the AR platform with their own cheap, mass produced, no frills rifle. Rumors persist that Ares intentionally cut corners with this weapon, such as not including a chrome lined barrel, to ensure repeated replacement sales. *Stock.*

AR Platform Firearms (5.56): Military assault rifles from various manufacturers, such as the classic M4 carbine, and dozens upon dozens of interchangeable civilian designs ubiquitously known as the ‘AR-15’, these rifles represent nearly 100 years of continuous production as the predecessors of Colt’s M22 and M23 lines. All feature mostly the same characteristics: an adjustable or collapsible stock, magazine interchangeability along the STANAG pattern, iron sights, a pistol grip, and various mounting rails along the barrel shroud and above the weapon’s frame for customization. Most military variants are capable of burst fire or full auto fire, while civilian variants are semi-auto only but potentially converted to full auto. Very rarely an AR platform rifle is encountered chambered for a cartridge other than 5.56. At GM discretion, the cartridge, Accuracy, and Fire Modes of a rifle may be changed as befits the type or quality of the weapon in question. *Folding Stock, Tactical Rail (Top, Sides, Underbarrel), Vintage.*

Cavalier Frontier (5.56): A rugged assault rifle representing Cavalier’s attempt to expand their market outside of North America. Designed with corrosion resistant materials and made to take, and give, a beating, the Frontier is becoming increasingly popular with mercenary and militia groups. Comes equipped with a tactical rail system to mount upgrades on both sides and underbarrel. *Extreme Environment Modification (Arid), Melee Hardening, Stock, Tactical Rail (2 Sides, Underbarrel).*

Colt Inception (.308): Colt’s newest entry into the paramilitary market is based off their ubiquitous AR platform, but built to a higher standard of precision with titanium alloy and reinforced polymer construction, and nearly no moving internal parts. It includes an integral laser sight, an underbarrel bipod, and top-mounted tactical rail. *Bipod (Underbarrel), Caseless Only, Electronic Firing, Laser Sight, Melee Hardening, Stock, Tactical Rail (Top).*

Colt M22A2 (5.56): *Imaging Scope (Vision Magnification), Gas Vent 1, Grenade Launcher.*

Colt M23 (5.56): A cheap, mass produced AR platform that can be customized from the ground up. Features a fixed stock and a tactical rail system capable of accepting upgrades all around. This highly customizable rifle can accept 2 more accessories or modifications beyond its standard limit. *Stock, Tactical Rail (Top, 2 Sides, Underbarrel).*

Colt M23A2 (5.56): A short carbine version of the M23 that Colt, Trust the Legend, has engineered to higher specifications while simultaneously running a worldwide marketing campaign to promote this rifle as the “Tacticool” choice of “True Operators”. It comes equipped with a standard loadout of modifications deemed the most popular among its users, including: a top-mounted improved rangefinder, a side mounted low-light flashlight, and an internal smartgun system. Retains the four slot tactical rail system of the Colt M23 (with one side slot already occupied by the flashlight). *Improved Rangefinder (Top), Flashlight (Low-Light, Side), Smartlink, Stock, Tactical Rail (Top, 2 Sides, Underbarrel).*

Colt M24A3 Water Carbine (5.56): Colt’s modern, modular platform designed for underwater operations by UCAS Navy SEALs. A watertight sealed chamber is fed by tubes that hook up to the user’s breathing apparatus or external air source, which allows the rifle to fire normal, caseless ammunition underwater. Positive air pressure and cleaning valves prevent water from entering the chamber during firing or magazine changes. Requires special watertight sealed magazines available from the manufacturer for +100¥. *Caseless Only, Stock, Tactical Rail (Top, 2 Sides, Underbarrel).*

FAMAS (5.56): The standard issue French assault rifle leading up to the Euro Wars, the FAMAS, known as *Le Clairon*, or “the Bulge”, is a bullpup assault rifle with

composite furniture and a distinctive carrying handle that protects its top-mounted, vertical charging lever. *Bayonet Mount, Stock, Vintage*.

FN HAR (5.56): This popular assault rifle from FN Herstal is the most common among corporate and private security in Europe. It comes with an integral folding stock, top-mounted laser sight, and a barrel mounted gas vent system. *Folding Stock, Gas Vent Rating 2 (Barrel), Laser Sight (Top)*.

FN CWAR (5.56): This variant of the FN HAR, the Cold Weather Assault Rifle, is identical to the HAR with a few tweaked upgrades. It trades the laser sight for an integral smartgun system, improves the gas vent system, and is built with components that can withstand extreme cold weather conditions. *Extreme Environmental Modification (Arctic), Folding Stock, Gas Vent Rating 3 (Barrel), Smartlink*.

HK 416 (5.56): A piston driven development of the AR platform from H&K. The removal of the buffer tube enables this rifle to be modified with a folding stock and increases its reliability compared to gas impingement AR's. Prior to the Euro Wars this rifle was adopted on a limited basis, but during and after it came to prominence until modern weaponry supplanted it. *Stock, Tactical Rail (Top, Sides, Underbarrel), Vintage*.

HK G3 (.308): The original battle rifle from H&K, first manufactured over a century ago. Various knockoffs have cropped up over the years, some made to the same standards as the original models. *Stock, Vintage*.

HK G36 (5.56): A Heckler & Koch design that predates the Euro Wars, the HK G36 is an ergonomic, lightweight assault rifle with a solid reputation. It is still listed on HK's catalog but no known orders have been made in decades. A Sport version with an extended barrel is manufactured for commercial UCAS sales in small quantities every year. *Folding Stock, Long Barrel*, Vintage*.

HK G9A4z (5.56): An assault rifle designed for corporate security forces, featuring a lightweight polymer frame and an integrated smartgun system. *Smartlink, Stock*.

HK G12A3z (9mm S-K): The next logical step from the HK G11A4z, this rifle is lighter, less bulky, and features an integral top-mounted laser sight, barrel-mounted gas vent system, and a telescoping shoulder stock. *Caseless Only, Folding Stock, Gas Vent Rating 2, Laser Sight*.

HK XM30 (5.56/12ga): HK's modular weapon system built around a bullpup design with a full shock pad, top-mounted accessory rail and accompanying imaging scope, integrated smartlink system, and both an underbarrel minigrenade launcher and shotgun. The rear of the rifle is a somewhat awkward mash up of 3 separate magazine wells to accept detachable mags for the rifle cartridges, the shotgun shells, and the minigrenades; at GM discretion, unless a character is very proficient and

experienced in the use of this weapon, they may require expending 2 Reload Actions to correctly insert a new magazine. The basic assault rifle configuration can be changed with simple barrel swaps to provide tactical options, while still firing the same cartridge. Each of the barrel kits is sold separately; all together may fit in a large briefcase or backpack. The carbine kit includes a longer barrel but otherwise functions identically to the base configuration. The sniper kit provides an even longer barrel for improved accuracy and a bipod for improved control while deployed. The LMG kit features a heavy barrel for sustained fire, a larger magazine, and the same bipod as the sniper kit. The XM30 is capable of feeding ammunition from belts loaded through the side of the action, rather than from the normal magazine well; this is intended for use with the LMG barrel and can be used with other configurations if desired. All configurations may also make use of the extended capacity 50 round magazines of the LMG configuration. The base configuration of the XM30 receives +1 to Concealability Thresholds, all other configurations lose this bonus. Changing from one configuration to another requires 2 Interact with Device Actions to remove one barrel and install another. *Bipod (Underbarrel)*, Caseless Only, Electronic Firing, Imaging Scope (Top, Image Link, Vision Magnification), Minigrenade Launcher (Underbarrel), Shock Pad, Shotgun (Underbarrel), Smartlink, Stock, Tactical Rail (Top)*.

Jianshi QBZ-14 (5.8x42): A next generation design from the era of the Euro Wars that has been continuously manufactured across the former realms of Communist China. The QBZ-14 is a bullpup design that is more compact than most and makes use of a dual magazine system; it is able to feed from the rear or forward magazine as needed, both located nearly up against the weapon's limited use shoulder brace. Many examples of this assault rifle are found with a barrel-mounted suppressor and it features a rail system for mounting optics. The QBZ-14 receives a +3 modifier to Cocealability Thresholds. *Additional Magazine, Sound Suppressor, Tactical Rail (Top), Vintage*.

Jianshi QBZ-21 (5.8x42): An improved and simplified QBZ-14 that trades the second magazine for an underbarrel grenade launcher. Features a more ergonomic, if less compact and concealable, stock with a shock pad, a barrel-mounted flash suppressor, and a top-mounted imaging scope. *Flash Suppressor (Barrel), Grenade Launcher (Underbarrel), Imaging Scope (Top, Flare Compensation, Low-Light), Shock Pad, Stock*.

Krime Happiness (5.56): A Krime assault rifle designed for high rates of fire without needing to reload quite as often. The feed mechanism accepts a belt from either the left or the right and ejects out the bottom of the magwell. Normally use with 100 round belts, a 250 round belt as well as a standard 30 round detachable magazine are available. On a glitch, the weapon is likely to have a run-

away firing situation where it continuously slamfires until the belt or magazine have run empty, or the weapon suffers a catastrophic failure preventing it from firing. *Stock*.

Nitama Optimum II (5.56/12ga): The official assault rifle of the Imperial Japanese Army. Features a bullpup design with an integrated shock pad, smartlink, and underbarrel pump shotgun. *Shock Pad, Shotgun (Underbarrel), Smartlink, Stock*.

Onotari Arms HL-13 (5.56/7mm Auto/6.5 CBJ): Saeder-Krupp's attempt at a multi-use, configurable weapon system. The Onotari Arms "High-Low" 13 contains an internal smartgun system equipped receiver, fire control group, and pistol grip that can be mated with quick change chambered barrels to fill the role required of it. The assault rifle configuration attaches a detachable folding stock and a carbine length 5.56x45mm barrel that includes an underbarrel tactical rail. The submachinegun configuration uses the same folding stock but installs a shorter barrel to utilize 7mm Auto and high capacity quad-stack magazines. The personal defense weapon configuration, or PDW, removes the stock, but adds a folding foregrip, and fires armor piercing 6.5 CBJ rounds. To change from one configuration to another requires 2 Interact with Device Actions to remove one barrel and replace it with another. *Folding Stock*, Foregrip (Underbarrel)*, Smartlink, Tactical Rail (Underbarrel)**.

Onotari Arms JP-K49 (11mm S-K): The predecessor of the Dragon's JP-K50 which saw limited production and use with UN peacekeepers. The JP-K49's solid design was overlooked in favor of cheaper rifles with a wider range of tactical options. With good accuracy and low recoil combined with a large caliber, hard hitting cartridge, the rifle's largest flaws were a lack of advanced electronics and a low rate of fire. Features an integrated imaging scope that showcases its use as a long range battle rifle. *Caseless Only, Electronic Firing, Imaging Scope (Top, Low-Light, Vision Enhancement 1, Vision Magnification), Shock Pad, Stock*.

Onotari Arms JP-K50 (11mm S-K): A design intended for the next round of the Euro Wars, then shelved for decades when that never occurred, the JP-K50 was brought back into production after design tweaks of the JP-K49 evolved it into an "Anti-Dragon" rifle. The end result was more of a super-sized assault rifle; expensive yet high quality, heavy, accurate, and capable of firing a heavy, large, high powered projectile with burst fire capability that is designed to make wide use of specialized ammo types. Includes a shock pad built into the rigid stock, and an over/under rail system for quick attachment of accessories. *Caseless Only, Electronic Firing, Shock Pad, Stock, Tactical Rail (Top, Underbarrel)*.

Onotari Arms Kali (7.62 Soviet): A modern evolution of Kalashnikov's designs that pushes the limits those venerable designs set for functional use after extreme abuse.

This rifle was manufactured with enhanced polymers to withstand anything thrown at it, or anything it is thrown at. While a completely bare bones models (and cheap!), it does feature a rail mounting system for desired upgrades. *Melee Hardening, Stock, Tactical Rail (Top, Underbarrel)*.

Onotari Arms Kriegfaust (12.7x108): The Kriegfaust is marketed to the larger metahuman populations with a widespread ad campaign, a drum magazine less likely to be mishandled during a firefight, and a heavily reinforced frame. Shooting high caliber rounds more likely to be found in a heavy, fixed emplacement or vehicle-mounted machine gun, the Kriegfaust is almost classified as an assault cannon. Despite the high caliber rounds, the Kriegfaust's sheer size and weight help to reduce felt recoil. Features an imaging scope mounted directly to the frame of the rifle and a shock pad integrated into the stock. *Imaging Scope (Vision Enhancement 1, Vision Magnification), Melee Hardening, Metahuman Adaptation, Shock Pad, Stock*.

Onotari Arms L-493 (11mm S-K): A rifle originally designed for Greece's Minotaur conscripts. The L-493 is heavily reinforced and able to take a beating (or give one), yet is light enough to be wieldable by less sturdy metahumans thanks to its lightweight composite construction. Includes an imaging scope that is little more than a link for allowing superior officers to view what their grunts are shooting. *Imaging Scope (Top, Image Link), Melee Hardening, Metahuman Adaptation, Stock*.

Onotari Arms Punisher (7.62 Soviet): A lightweight assault rifle with minimal features but good ergonomics. Features an integrated low-light scope. *Imaging Scope (Low-Light, Vision Enhancement 2), Stock*.

Onotari Arms Room Sweeper (9mm S-K): The Room Sweeper is short-barrelled, bullpup assault rifle utilizing modern components. It fires the same caseless cartridge as the HK G12 series, in fact it can even swap magazines. The Room Sweeper was designed for CQC, hence its name, and its electronic suite was built to supplement that role. Includes an integral smartgun system, imaging scope with flare compensation, and a safe target system. A Peak Discharge Battery Pack is required to continuously power all these accessories and ensure the function of the electronically primed caseless ammunition; the location of this battery precludes the mounting of any underbarrel accessories or modifications. *Caseless Only, Electronic Firing, Imaging Scope (Top, Flare Compensation, Image Link), Safe Target System, Short Barrel, Smartlink, Stock*.

Onotari Arms SBd-44 (.308): A relic of the Euro Wars, the SBd-44 was a hastily built weapon that skipped quality and effectiveness for quantity and speed of construction. More valuable today in the eyes of a collector than on the street, the SBd-44 is still listed in Saeder-Krupp's catalogues, but no known order has been placed in over 20 years. *Stock, Vintage*.

Onotari Arms Urban Hunter (13mm S-K): Onotari Arms' versatile heavy battle rifle is as powerful as many assault cannons with its unique Dragonfire ammunition. If that weren't enough, it's fully capable of burst firing, something most assault cannons can't dream of. Minimal features include a top-mounted laser sight and a heavy barrel. *Caseless Only, Electronic Firing, Heavy Barrel, Laser Sight (Top), Stock.*

Onotari Arms XFactor III (5.56/12ga): A Saeder-Krupp designed bullpup rifle that features a second magazine for high ammunition capacity and half as many reloads. Features a second magazine, RFID safety system, a shock pad, an underbarrel-mounted shotgun, and a top-mounted imaging scope. *Additional Magazine, Advanced Safety, Caseless Only, Imaging Scope (Top, Thermo-graphic), Shock Pad, Shotgun (Underbarrel), Stock.*

Sernopal vz/88V (7.62 CZ): The rifle of the Czech Mechanized Forces that sees widespread use across eastern Europe. Features an underbarrel laser sight, a top-mounted imaging scope, a barrel-mounted gas vent system, and a folding stock for manageability and easy storage. *Folding Stock, Gas Vent Rating 2 (Barrel), Imaging Scope (Top, Low-Light, Vision Enhancement 1, Vision Magnification), Laser Sight (Underbarrel).*

Shiawase Arms Monsoon (7mm Nemesis): Utilizing a "magazine barrel" the same as the Shiawase Rain shotgun, the Monsoon carries 6 barrels in a vertical elongated hexagonal pattern, each stuffed nearly one third of its length with 20 caseless cartridges stacked end to end for a total of 120 rounds of ammunition available without reloading. To reload the Monsoon requires 1 Unload Action to remove a spent barrel, and 1 Reload Action to insert a pre-loaded barrel. The Monsoon is made from rugged materials, is nearly maintenance free with no moving internal parts, and includes an integral smartgun system in its own shock-proof housing. A large LED display set into the side of the Monsoon displays the current round count of unfired cartridges at all times. *Caseless Only, Electronic Firing, Melee Hardening, Smartlink, Stock.*

Shiawase Arms Tactical Model 73 (5mm SA): The pinnacle of Shiawase's Stream line, the Model 73 is a complete modern weapon system designed to effortlessly integrate with a soldier's PAN. A bullpup system with a high capacity helical drum magazine is joined by an ergonomic modern design with a blistering rate of fire, a unique recoil absorption design, and an electronics suite that includes an integral smartgun system with a biometric safety and room for upgrades. The internal systems are able to ensure reliable feeding from the helical magazine, eject any rounds that manage to fail, and even inform the operator if the barrel or other internals are at too high of a temperature for safe use. Includes a flash suppressor and imaging scope. When firing, the Tactical Model 73 uses 5 rounds per Burst, and 15 rounds when set to Full

Auto. *Advanced Safety, Caseless Only, Electronic Firing, Flash Suppressor (Barrel), Imaging Scope (Top, Image Link, Vision Magnification), Smartlink, Stock.*

Shiawase Arms Tactical Model 75 (7mm Nemesis): A development of the Model 73; it is essentially the same assault rifle in a larger caliber, at the expense of total ammunition capacity. Adds a safe target system and a foregrip for better control. Has the same 5 round bursts and 15 round Full Auto rate of fire of the Model 73. *Advanced Safety, Caseless Only, Electronic Firing, Flash Suppressor (Barrel), Foregrip (Underbarrel), Imaging Scope (Top, Image Link, Vision Magnification), Safe Target System, Smartlink, Stock.*

SIG Sauer 574 (.308): A Euro Wars veteran from SIG, capable of fulfilling suppressive fire or sniping roles. Although not capable of full-auto and limited to burst fire, the 574 is an accurate rifle from SIG that features a top-mounted red dot sight, a folding stock, a folding bipod, and an integral flash suppressor. One of SIG's proprietary sound suppressors can be mounted over the integral flash suppressor, available for +600¥. *Bipod, Flash Suppressor, Folding Stock, Red Dot, Vintage.*

Steyr AUG-CSL (5.56): A multi-weapon system capable of fulfilling the roles of an assault rifle, a sniper rifle, a SMG, or a LMG. Comes in a special briefcase with all of the component parts and barrels to configure to its desired role. The Steyr AUG requires an Armorer + LOG (8, 1 Combat Turn) Extended Test to change configurations; the same test with a Threshold of 5 is required for breaking down the rifle for transport. The basic assault rifle itself comes with an integral top-mounted laser sight and a barrel-mounted gas vent system. Configuring to the sniper rifle utilizes a longer barrel for increased accuracy and range, while the foregrip is replaced with a folding bipod and the laser sight is joined by an imaging scope. The sniper config also comes with a much shorter, half capacity magazine that doesn't interfere with going prone to fire the weapon. The LMG configuration shares all features of the sniper config, it may even use the imaging scope too, but incorporates a heavy barrel. The LMG is capable of feeding from the same magazines used in other configs, but is intended for using a belt of ammunition fed directly into the action from the side. The final configuration, as a SMG, exchanges the barrel for a very, very short barrel to make a super compact weapon. With the SMG barrel installed, the Steyr AUG receives a +2 to Concealability Thresholds. *Bipod (Underbarrel)*, Foregrip (Underbarrel), Gas Vent Rating 1, Heavy Barrel*, Imaging Scope (Top, Low-Light, Vision Magnification)*, Long Barrel*, Laser Sight, Short Barrel*, Stock.*

Ultimax 47 (8x57): A training rifle with very limited amenities. Designed to give new shooters a platform for honing their own skills with a powerful cartridge capable of long range target practice, but occasionally issued to personnel who require a temporary rifle with limited suppres-

sive capabilities. Features a top-mounted laser sight for close quarters target acquisition. Renraku notably began producing the somewhat oddball cartridge a few weeks before this rifle was released to the public. *Laser Sight (Top), Stock.*

Ultimax 68 (7.62 Soviet): The newest addition to the arsenal of the Arabian Caliphate, and a popular breaching rifle with SWAT teams and special forces across Asia, the Ultimax 68 is a compact weapon equipped with a folding stock and a suppressor. Receives +1 to Concealability Thresholds, which increases to +2 when the stock is folded. *Folding Stock, Short Barrel, Sound Suppressor.*

Ultimax 83 (5.8x42): Features minimal electronics, a folding stock, a top-mounted laser sight, and a cooling sleeve around the barrel for sustained fire without overheating. Only capable of automatic fire. Despite marketing claims, the Ultimax 83 is not perfectly reliable but functions well enough for its cost. Not capable of mounting any barrel or underbarrel upgrades or accessories. *Folding Stock, Laser Sight (Top).*

Ultimax 150 (.300 UM): A burst fire capable battle rifle with a complete electronics suite and many upgraded features. This big bore, heavyweight rifle packs a punch, despite throwing large caliber rounds down range it is easy to control even when firing bursts. This is thanks to a unique shock absorption system built into the frame, a heavy folding bipod, a heavy barrel, and a rigid stock with a shock pad. This unique rifle features an integrated commlink (a Renraku Type 78-B), smartgun system, advanced safety system, and safe target system. Topping it off is an easily customizable rail for advanced optics and it even manages to cram space in the stock for storage of an extra magazine for convenient reloads. *Advanced Safety (Basic), Ammunition Storage, Bipod (Underbarrel),*

Heavy Barrel, Integrated Commmlink, Safe Target System, Shock Pad, Smartlink, Stock, Tactical Rail (Top).

Ultimax Rain Forest Carbine (12mm Auto): A short-barreled rifle built to the specifications of the Sumatran Alliance; compact, hard hitting, and designed to survive beneath the double and triple canopy rainforests it would see the most use in. The Rain Forest features a night vision scope, a deep magazine well to protect from moisture and dirt, a retractable stock, and corrosion resistant components. *Extreme Environmental Modification (Humid), Folding Stock, Imaging Scope (Top, Flare Compensation, Image Link, Low-Light).*

Yamaha Raiden (3mm Yamaha): Japanacorps answer to the Ares Alpha, the Raiden is quickly becoming the standard issue of most corp security and is the official assault rifle of the Imperial Japanese Marines. Features an internal smartgun system, electronic firing, integral sound suppressor, and a folding stock. *Caseless Only, Electronic Firing, Folding Stock, Smartlink, Sound Suppressor.*

Yamaha Raiden II (3mm Yamaha/10ga): This evolution of the Raiden is the same rifle but features a combination underbarrel shotgun and grenade launcher. The shotgun is a muzzle loading side-by-side double barrel utilizing large shells that benefit from flechette ammunition (factored into damage code shown), but it does suffer from a lack of barrel length. The grenade launcher is fed from a 6 round tubular magazine. Both are controlled with the same forward trigger, which can only be wirelessly set for which system is in use, and whether the shotgun fires a single round or both simultaneously as a burst. *Caseless Only, Electronic Firing, Folding Stock, Grenade Launcher (Underbarrel), Shotgun (Underbarrel), Smartlink, Sound Suppressor.*

Light Machine Guns - Most often assault rifle size or slightly larger and always capable of fully automatic fire, LMGs fulfill mostly the same role but usually have much higher ammunition capacities to better lay down suppressive fire. May take top-mounted, barrel-mounted, and underbarrel accessories and modifications. Unless otherwise noted, all LMGs may accept 100 round or 250 round belts in place of their detachable magazines. LMGs suffer double the penalty from Uncompensated Recoil.

Ares MP-LMG (6mm Ares): A general purpose light machine gun fielded at some point by nearly every military and mercenary group in the world. The Ares MP-LMG hits hard with moderate accuracy but less than desirable recoil control. Features an underbarrel-mounted laser sight, a barrel-mounted gas vent system, and a hip pad bracing system. *Gas Vent Rating 2 (Barrel), Hip Pad Brace, Laser Sight (Underbarrel).*

GE Vindicator Minigun (5.56): A six barrel rotary design that fires relatively light ammunition at astonishing rates of fire. The “Vindi” comes equipped with an integrated smartgun system and tactical rails to accept accessories. Before firing, the Vindicator Minigun requires 1 entire Combat Turn and a single Interact with Device Action to spin the barrels up to firing speed. Once at full speed

each Full Auto burst of fire spits out an astounding 50 rounds. GE’s patented “double stack” ammunition belts hold twice the amount normally found with machine guns; the basic 200 round belts are available for +100¥ each and 500 round belts for +300¥ each. The Vindicator requires a connected power supply to operate the ammunition feed and spin the barrels, this is usually supplied by the vehicle or drone it is mounted on, but for those burly enough to carry one, a Peak Discharge Battery Pack supplies enough power for 10 minutes of use. The Vindicator may not accept any barrel or underbarrel accessories or modifications. *Belt Fed Only, Smartlink, Tactical Rail (Top x2).*

HK MG4/46 (): The further development of the famous HK MG4 from the EuroWars, the '46 model is a lightweight police support weapon manufactured with military quality controls. Has an integrated low-light amplification scope, laser sight, and bipod. *Bipod (Underbarrel), Imaging Scope (Top, Low-Light, Vision Magnification 2), Laser Sight (Barrel).*

HK MG-14 (9mm S-K): This light MG from H&K is a lightweight, assault rifle sized variation of their G12 line intended to function as a light squad automatic weapon. Cannot feed from belts of ammunition, only detachable

magazines. It has all of the same features including the gas vent system, the telescoping stock, and fires the same caseless ammunition. Capable of sustained fire and includes a smartlink system, integral bipod, and imaging scope. *Bipod (Underbarrel), Caseless Only, Extended Magazine, Folding Stock, Gas Vent Rating 2 (Barrel), Imaging Scope (Top, Vision Enhancement 1, Vision Magnification), No Belt Feed, Smartlink.*

Ingram Valiant (5.56): Very popular with mercenary groups and continuously in production for decades, the Valiant comes equipped with a rigid stock and shock pad, an integral laser sight, and a gas vent system to enhance recoil control. *Gas Vent Rating 2, Laser Sight, Shock Pad, Stock.*

Ingram White Knight (): A legendary light machine gun that boasts an exceptional rate of fire and rugged reliability. The White Knight is a staple among mercenary units worldwide. *Gas Vent Rating 2, Stock.*

Krime Triple-Dwarf Nanogun (9mm Para): Krime's smallest tri-barrel LMG sized for Dwarves. Features a patented chainsaw style grip and internal smartgun system. The Triple-Dwarf Nanogun consumes 12 shots with each Full Auto attack. *Belt Fed Only, Metahuman Adaptation, Personalized Grip, Smartlink.*

Krime Triple-Ork Microgun (5.56): Krime's slightly larger Ork sized tri-barrel. Comes with the standard features of the Krime Triple series LMGs; a chainsaw grip and smartgun system. The Triple-Ork Microgun consumes 15 shots

with each Full Auto attack. *Belt Fed Only, Metahuman Adaptation, Personalized Grip, Smartlink.*

Krime Triple-Troll Minigun (.308): The largest of the Triple series, the Troll sized Minigun has the highest rate of fire (6,000 rounds per minute) and the longest range of accurate fire. Features the standard Triple series modifications. The Triple-Troll Minigun consumes 18 shots with each Full Auto attack. *Belt Fed Only, Metahuman Adaptation, Personalized Grip, Smartlink.*

Krime Wave (.308): A Krime rebuild of a classic machine gun with a high rate of fire. Features the standard "Troll Tough" construction and an underbarrel bipod. *Bipod (Underbarrel), Metahuman Adaptation, Stock.*

RPK-74 (5.45): A light machinegun companion of the AK-74, the RPK-74 is nearly identical. Differences include a lengthier barrel, a built in bipod, and the use of an extended magazine, although it is perfectly capable of feeding from the AK-74's 30 round magazines. *Bipod, Stock, Vintage.*

Shiawase Arms Nemesis LMG (7mm Nemesis): A modern infantry support weapon that boasts a good electronics package. The Nemesis is a hard hitting, lightweight LMG that packs an internal smartgun system, a safe target system with 20 different programmable image recognition profiles and 20 different RFID settings, an integral gas vent system, and a rail mount to improve the iron sights, if desired. *Gas Vent Rating 2, Safe Target System (Advanced), Smartlink, Stock, Tactical Rail (Top).*

Medium Machine Guns - MMGs require STR rating 8 to successfully wield as a weapon, which is why they are more commonly found as vehicle mounted, drone mounted, or fixed emplacement weaponry. They may accept top-mounted, barrel-mounted, or underbarrel accessories or modifications, and like LMGs may accept 100 round or 250 round belts in place of their detachable magazines unless otherwise noted. MMGs suffer double the penalty from Uncompensated Recoil.

FN MAG-5 (.308): A shorter barrelled MMG that has nothing to write home about for accuracy, but is lightweight enough to be used as personal firearm when needed. FN Herstal's MAG-5 is an evolution of an ancient design that features an integral gas vent system and laser sight, and comes with an optional folding tripod. The MAG-5 feeds from short 50 round belts held in a box that functions as a detachable magazine. *Belt Fed Only, Gas Vent Rating 2, Laser Sight, Short Barrel, Stock, Tripod.*

Stoner-Ares M202 (.308): A workhorse machine gun chambered in a century old standard high powered cartridge that is commonly found vehicle-mounted as a secondary weapon thanks to its lightweight framework made

of extra-durable compounds.

Ultimax MMG (.308): The Ultimax Medium Machine Gun resembles a large assault rifle or a marksman's rifle at first glance. The extended barrel and integral laser sight give it precision at range, while a foregrip and a folding bipod provide stability on the move or emplaced. A rail mount allows upgrading the iron sights with the user's choice of accessories. *Bipod (Underbarrel), Foregrip (Underbarrel), Laser Sight, Long Barrel, Stock, Tactical Rail (Top).*

Whitney-Morgan MG (.308 NATO/7.62 Russian): A modernized take on the first European machine guns of the Great War, the Whitney-Morgan shares the same basic design as weapons such as the venerable Maxim Gun. The liquid cooling jacket has been replaced by 4 rotary barrels which, combined with its slow by modern standards rate of fire, prevents the barrels from overheating or requiring barrel changes from extended use. A standard peak discharge battery supplies effectively unlimited power for the barrels' rotating mechanism. Cannot accept barrel or underbarrel modifications or accessories. *Belt Fed Only, Tripod.*

Medium Ma- chine Guns	ACC	DV	AP	MODE	RC	RANGE	AMMO	AVAIL	WEIGHT	COST
FN MAG-5 MMG Ruhrmetall R506 Bal- mung Stoner- Ares M202 Ultimax MMG Whitney- Morgan MG	4(5)	16P	-8	FA	2(9)	Distant	50(dm)	18(F)	9.50	2000¥
	5	18P	-10	FA	0	Distant	50(d)	12(F)	2000¥	
	5(6)	18P	-10	FA	(4)	Distant	40(dm)	16(F)	12.00	2300¥
	3	18P	-10	FA	(6)	Distant	100(belt)	2800		

Heavy Machine Guns - HMGs require STR rating 10 to wield as a personal weapon. The same as LMGs and MMGs, they can accept 100 or 250 round belts unless otherwise noted and may be upgraded with top-mounted, barrel-mounted, and underbarrel modifications and accessories. HMGs suffer double the penalty from Uncompensated Recoil.

Ares Arctic Suppressor (.50 BMG): The Arctic Suppressor is a heavy MG designed to function in extreme cold weather. It has few moving internal parts and uses an electronic priming system; this requires the use of caseless ammo which have the added benefit of avoiding any sticking issues with cold temperatures in the feed system. To increase reliability the Arctic Suppressor does not feed from belts, but instead utilizes a dual feed system from two top mounted, oversized drum magazines. If one drum suffers a failure the weapon is still capable of feeding from the other, but their bulk and positioning preclude the use of any top-mounted accessories or upgrades. Includes a rigid stock with shock pad, and a barrel-mounted gas vent system to control recoil. *Caseless Only, Dual Magazine, Electronic Firing, Extended Magazine, Extreme Environmental Modification (Arctic), Gas Vent Rating 3 (Barrel), No Belt Feed, Shock Pad, Stock.*

RPK HMG (12.7x108): A heavy Russian machine gun in common use with eastern European and Near East countries. Commonly vehicle-mounted, but comes equipped with an optional tripod for use while prone, sitting, or kneeling. *Tripod.*

Ruhrmetall SF-20 (13.2 TuF): MET2000's official, and at one time exclusive, HMG that offers a highly customizable platform capable of fulfilling multiple roles. The standard loadout includes a built in laser sight and gas vent system, as well as a folding tripod that doubles as a pintle mount for vehicles and a large bracing pad when carried unmounted. *Gas Vent Rating 3, Hip Pad Bracing, Laser Sight, Tactical Rail (Top, Sides), Tripod (Underbarrel).*

Stoner-Ares M107 GP-HMG (): The Stoner-Ares General Purpose Heavy Machine Gun is the successor to their battle-proven M98. It features a gas venting recoil buffer and an integrated laser sight. Capable of using 40 round magazines or fed by continuous belts. *Gas Vent Rating 3 (Barrel), Laser Sight, Stock.*

Ultimax HMG (.50 BMG): This amped up upgrade of the Ultimax MMG features all of the same features with a few enhancements. The much larger cartridges the HMG-2 fires restrict its use when carried as a personal weapon due to a much smaller magazine capacity. *Bipod (Underbarrel), Foregrip (Underbarrel), Heavy Barrel, Laser Sight, Long Barrel, Shock Pad, Stock, Tactical Rail (Top).*

Ultimax HMG-2 (.50 BMG): A simpler and cheaper evolution of the Ultimax HMG which has been designed for ease of use and primarily as a vehicle-mounted weapon. Features an integral gas vent system with an optional rigid stock and shock pad. Includes a mounting point for a tripod as well. *Gas Vent Rating 3, Shock Pad, Stock, Tripod (Underbarrel).*

Heavy Machine Guns	ACC	DV	AP	MODE	RC	RANGE	AMMO	AVAIL	WEIGHT	COST

Assault Cannons - Assault Cannons are heavy anti-material and anti-vehicle weapons that can barely be counted as a hand held firearm, unless you happen to be a Troll. They may accept top-mounted and underbarrel modifications and accessories. Assault Cannons suffer double the penalties from Uncompensated Recoil.

Ares Ogre Hammer SWS (20mm M): Ares' 'Ogre Hammer' Sniper Weapon System is a bit overkill for its intended role, being more suited as a light vehicle's main armament, or a heavier vehicle's secondary weapon. This massively powerful assault cannon is capable of a higher rate of fire and has a unique hydraulic recoil reduction system. It comes equipped for its intended role with a cutting edge sighting system, and includes other electronic upgrades in the form of a safety system and built in commlink. *Advanced Safety (Basic), Imaging Scope (Top, Flare Compensation, Image Link, Low-Light, Vision Magnification), Integrated Commlink (Ares Ultra Four), Shock Pad, Stock.*

Ares Thunderstruck Gauss Rifle (10mm Ares): An assault cannon that runs off electricity and superconducting magnets rather than propellant, Ares' Thunderstruck is capable of launching a 1 oz. thumb sized slug of metal that sounds like a crack of thunder as it heads down range at over 8 times the speed of sound. While the Thunderstruck generates no felt recoil with each shot, it has a limited rate of fire due to the capacitors' recharge requirement. Includes a tactical laser sight and rail mount. The Thunderstruck may not mount barrel or underbarrel accessories as they could interfere with the magnetic rails. This weapon may fire no more than once per Combat Round; it requires a full 3 seconds to reset for the next shot. Requires both a magazine of solid metal slugs as

projectiles and a charged power source to function. Power is usually provided by a Peak Discharge Battery Pack providing enough juice for all 10 rounds in the magazine, but the Thunderstruck may also accept satchel, backpack, or vehicle provided power if connected. Reloading, if not hooked up to a power source, requires both 1 Reload Action for a new magazine of projectiles, and 1 Reload Action for a new battery pack. *Laser Sight, Tactical Rail (Top).*

Ares Vigorous (15mm M): A bare bones assault cannon with plenty of room for upgrades. The Ares Vigorous resembles an overly large, semi-automatic anti-material rifle. While fully capable of producing a product with all the bells and whistles, Ares ships the Vigorous with only a rigid stock and mounting rails. *Stock, Tactical Rail (Top, Underbarrel).*

Charter Arms Curse (20mm HH): A uniquely designed assault cannon for short range, pinpoint fire support that employs a special long stroke action to reduce recoil. The Curse has increased magazine capacity thanks to half-power cartridges, but this does trade away some of their usual power and range. Comes equipped with a low-light scope for operations in all environmental conditions. *Imaging Scope (Top, Low-Light), Stock.*

Krime Bomb (12.7x108): A revolutionary recoil system makes the Krime Bomb perfect for the lesser metahumans to wield the power of an assault cannon, and this represents one of Krime's few attempts at a weapon system not custom tailored to Troll and Ork physiques. Includes a foregrip to help operate this pump action design, a top-mounted tactical rail for customization, and an integral laser sight under the barrel. *Laser Sight, Stock, Tactical*

Rail (Top).

Krime Cannon (14.5x114): The weapon that brought Krime into being a household name, the Cannon was one of the first weapons designed exclusively for use by a Troll. Small magazine capacity and lack of features

preclude this assault cannon from being top of the line, but that is more than made up for by its cheap cost and popular branding. *Foregrip (Underbarrel), Metahuman Adaptation, Stock.*

Grenade Launchers - Launchers for directly, or indirectly, lobbing grenades at medium ranges. Many different types of grenades provide tactical flexibility, from laying down smoke to filling a room with a high explosive blast to taking out heavy armor. Grenade launchers may use top-mounted and underbarrel accessories and modifications.

AGS-35 (30mm Minigrenade): A belt fed, fully automatic, crew-served support weapon usually found locked into a tripod or pintle-mounted as a secondary weapon on vehicles. A high rate of fire and versatility of ammo have kept this weapon system in use well beyond its expected lifespan. The AGS-35 feeds from a 30 round belt in a drum magazine, but it is also capable of taking larger 100 round belts of grenades. *Tripod.*

Ares Antioch-2 (50mm Grenade): A classic and affordable grenade launcher design upgraded with an internal

smartlink. May wirelessly detonate grenades, even without a Direct Neural Interface.

ArmTech MGL-6 (30mm Minigrenade): A pistol version of ArmTech's popular MGL-12. Cannot be equipped with underbarrel accessories or modifications.

ArmTech MGL-12 (30mm Minigrenade): A popular bullpup design with a good rate of fire in a rifle size. Can wirelessly detonate grenades, even without a Direct Neural Interface.

Enfield GL-67 (40mm Minigrenade): A heavyweight, but compact grenade launcher that is popular due to its sophisticated features. Includes a large capacity drum magazine, an internal smartgun system, an airburst link, and a shock pad attached to its rigid stock. *Airburst Link, Shock Pad, Smartlink, Stock.*

ArmTech SSG-67 (20mm Microgrenade): The Special Security Gun was designed for use on the Zurich orbital habitat. It fires semi-guided munitions with a compressed CO2 blast; these are essentially miniaturized missiles that use rudimentary guidance and their own reaction thrusters to operate in zero gravity. While capable of using normal grenade payloads, treat as microgrenades, the primary loadout for this weapon is a powdered form of Narcoject bonded with a semi-magnetized metallic compound. This compound adheres to targets and the immediate surroundings to prevent zero gravity hazards and cleanup problems. These specialized munitions are available for +250¥ each or add +200¥ to the cost of normal microgrenades used with this system; both have availability of 16(F). Includes an integrated smartgun system and airburst link. *Airburst Link, Smartlink.*

ArmTech SSG-69 (20mm Microgrenade): A development of ArmTech's SSG-67, the SSG-69 has increased magazine capacity, burst fire capability, and may use magnetized flechette rounds that are available for +500¥ each at

the same availability as the SSG-69 itself. *Airburst Link, Smartlink.*

HK 82A1 (50mm Grenade): A compact, bullpup design that weighs less than half as much as a standard grenade launcher. Receives a +4 to Concealability Thresholds; this bonus is lost when the retractable stock is extended. *Folding Stock.*

Terracotta X-6 MGL (40mm Minigrenade): Renraku's foray into grenade launchers, the X-6 is a solid, rugged design that features a revolving cylinder with six mini-grenades and a foregrip. *Foregrip (Underbarrel), Stock.*

Wirtz SW31 Demo Control (30mm Minigrenade): The Demo Control is primarily used as a short range shotgun in crowd control situations utilizing a plethora of specialized minigrenades packed with flechettes, rubber shot, oversized tranq darts (perfect for trolls!), and is also equally capable of firing standard 30mm minigrenades. The 5 round internal magazine can even be loaded with a mix of less lethal and lethal options.

Grenades - Grenades come in many forms and size factors, both throwable and launched, from handheld pistol-sized launchers up to large military vehicle grade systems. Standard sized grenades and smaller, such as micro-grenades or minigrenades, can be thrown by hand easily, but they may not always have the common push button or pin pulling activations that regular grenades commonly utilize. In general, assume that any wirelessly enabled grenade can be remotely triggered before or after it has been thrown or launched.

Winter Systems IFE Grenades (Grenade): From the manufacturer of the Flash-Pak and the Micro Flare comes a new sensation; the Inert Flameless Expulsion Grenade. Originally a training device, the IFE grenades use highly pressurized CO2 to expel their contents in all directions. Primarily used to deliver CS gas, they can also be retrofitted with various drugs, toxins, or even a makeshift fuel-air bomb solution. To fill an IFE grenade with sufficient material requires at least 5 doses of the relevant toxin or drug. Both gaseous and liquid payloads may be used.

Winter Systems IPE Grenades (Grenade): The Winter Systems IPE Grenade is a programmable, force-sensitive

explosive device built around the company's proprietary KLV-IV compound. Unlike conventional impact grenades that detonate upon any sufficient collision, the IPE incorporates an adjustable pressure-detection system that allows operators to define the exact force threshold required to trigger detonation. Prior to deployment, the grenade can be wirelessly programmed to respond to a specified impact range. This enables controlled tactical use; for example, the device can be set to withstand a high-velocity throw against a hard surface without detonating, then trigger only after a secondary, lower-force impact such as a rebound off the floor or contact with a target. This selective detonation logic allows for precise timing and placement in confined or obstructed environments. The internal sensor suite continuously measures acceleration and impact force in real time, comparing detected values against the programmed parameters. Once the defined pressure threshold is met within the designated range, the firing mechanism initiates the KLV-IV main charge. The result is a versatile, precision-configurable grenade system designed for environments where conventional impact triggers would be either too unpredictable or too limiting.

Grenades	DV	AP	BLAST	AVAIL	WEIGHT	COST
Winter Systems IFE	various	—	-2 per meter	0.25	50¥	
Winter Systems IPE	-1 per 2 meters	0.25				

Mortar Launchers - Mortars have been in use for centuries, usually consisting of a baseplate, a bipod or tripod mount, and a tube set at an angle for indirect fire. They are shorter ranged support weapons that operate by dropping a mortar shell down the tube or barrel where a small charge in the shell triggers, propelling it out of the tube at a high angle ballistic trajectory, before detonating the main charge in the shell upon impact or via airburst. Most mortars are smoothbore and the shells are kept on target with fin stabilization or spin stabilization. Many mortars include various sighting mechanisms attached to the tube body. The

bipod or tripod mount system is easily adjustable to change the angle of fire, and the baseplate gives the mortar a way to spread out and absorb recoil.

M-12 Portable Mortar (120mm Shells): The M-12 is a classic mortar, featuring a bipod brace and 4 prongs on the baseplate to anchor to the ground. Setting up or taking down the M-12 requires an Armorer + LOG (12, 1 minute) Extended Test. Carrying the component pieces of the system when disassembled usually requires multiple people, due to its excessive weight. The M-12 can only fire once per Combat Turn.

Mortar Launchers	ACC	DV	AP	MODE	RC	RANGE	AMMO	AVAIL	WEIGHT	COST
M-12 Portable Mortar	4	12P	-4	SS	0	—	1(m)	16(F)	120.00	600¥

Rocket Launchers - Rocket launchers are heavy weapons designed to deliver explosive payloads over medium distances. They may accept top-mounted and underbarrel accessories.

Arbalest II MAW (Medium Rockets): The Arbalest II Medium Anti-Armor Weapon fires unguided rockets from single ammunition canisters attached behind the firing tube. The firing section and its accompanying imaging

scope can be stored in a shoulder bag or duffel bag. Rockets purchased for the Arbalest II cost +50¥ each for their required canister that doubles as a storage device. *Imaging Scope (Top, Vision Magnification).*

Aztechnology Striker (Light Rockets): An extremely lightweight, cheap, and easily disposable rocket launcher.

M79B1 Light Anti-Armor Weapon (Light AV Rockets): The most common one shot, disposable rocket launcher in existence and one of the most popular, and cheapest, weapons in the world for anti-tank use. The M79B1's tube forms a watertight seal protecting its rocket from the elements; once opened, the housing cannot be resealed. The M79B1 may only fire Anti-Vehicular rockets and receives a +3 to Concealability Thresholds until its housing is opened and extended in preparation for firing. A single Interact with Device Action is required to extend the tube housing the rocket prior to firing.

Mitsubishi Yakusoku Medium Rocket Launcher (Medium Missiles/Rockets): An advanced launch system

capable of putting out a variety of munitions at a fast pace. The Yakusoku features a twin tube system fed by ammunition packs, each tube's corresponding magazine capable of holding 4 different rockets or missiles. The dual tubes and feed system allow significantly increased rates of fire, and it is even capable of firing both tubes simultaneously. Since firing both tubes, treated as a Burst, would require aiming them to the same location, most users opt to fire a mix of one dumb fire rocket with a missile capable of locking on or maneuvering on its own. The Yakusoku comes equipped with an imaging scope and laser designator built into the launcher's frame. Loading new missiles into the ammunition packs of the Yakusoku requires 1 Load Action per rocket or missile. *Imaging Scope (Image Link, Low-Light, Vision Magnification), Laser Designator.*

Ruhrmetall GPRL-Alpha (): A heavy, shoulder-fired rocket launcher with a sophisticated targeting system. Designed to defeat heavily armored vehicles. *Smartlink, Stock.*

Rocket Launchers	ACC	DV	AP	MODE	RC	RANGE	AMMO	AVAIL	WEIGHT	COST
Arbalest II MAW	5	4P	0	SS	0	—	1(ml)	14(F)	150¥

Mitsubishi Yaku-soku MRL	4	4P	0	SA/BF	0	—	4(dm)x2	20(F)	350¥	
Ruhrmetall GPRL-Alpha Spike Disposable Launcher	4(m)	9.00	9,000¥							

Rockets - Un-guided explosive projectiles fired from rocket launchers.

IMI Dagger (Light Rocket): An IMI design distributed through Ares, the Dagger is a lightweight collapsible anti-armor rocket that excels at armor penetration.

Rockets	DV	AP	BLAST	AVAIL	WEIGHT	COST
IMI Dagger	50P	-45	5S	12(F)	8.00	1,300¥

Missile Launchers - Missile launchers fire guided munitions capable of tracking and intercepting moving targets. They may accept top-mounted and underbarrel accessories.

9K135 Missile System (Kornet Missiles): An ancient Soviet-era launch system that combines a tripod launcher with a laser guidance system for designating targets. It was designed to only fire the Kornet/AT-14 Spriggan missile. *Laser Designator, Tripod.*

Great Dragon ATGM (Great Dragon Missiles): This Anti-Tank Guided Missile Launcher is a stripped down version of a popular surface-to-air missile system. The Great Dragon is mounted on a tripod and features an optical imaging scope. It may mount no other upgrades and may only fire its proprietary guided missiles. *Optical Scope, Tripod.*

MTR/M-231 (MTR Missiles): A heavy anti-tank missile, officially adopted by the US military as the M-231, which can be fired at long range to destroy most modern MBTs. The system consists of a firing tube that completely contains the missile and all of its controls; very simple to use and easy to discard afterwards. The missile's targeting logic and dual-seeker system defeat most countermeasures and jamming, and it is capable of a pop-up top-attack mode to defeat armor by attacking the weakest protected point. At GM discretion the top-attack mode only functions as intended roughly 50% of the time.

Onotari Arms Ballista Medium Missile Launcher (Ballista Missiles): A Saeder-Krupp missile launcher designed to knock a dragon out of the sky (Who would have guessed?). Features a backpack mounted launcher with an automated reloading system and a 4 missile capacity, as well as a handheld, fiber optically attached laser designator control system. The Ballista is capable of firing directly or indirectly, with or without a lock from the laser

designator. Can be programmed to accept target locks from other laser designators, other sensors on the user's PAN, or even outside connections. The Ballista is only capable of firing proprietary missiles. Reloading the Ballista requires a second character to expend 1 Load Action per missile to reload the backpack's magazine. For the user to reload themselves, they must spend both an Action to interact with the backpack and remove it before reloading, then 2 Actions to put the backpack on again and ready the system for firing. *Laser Designator.*

Onotari Arms Interceptor (Medium Missiles/Rockets): A versatile launcher from Saeder-Krupp which features a smartgun system and two separate tubes, each capable of loading either rockets or missiles. The Interceptor may load different missiles, different rockets, or even a mix of a missile and a rocket in its two tubes, but due to backblast issues they may not fire simultaneously. If, somehow, the user manages to fire both tubes together, they must resist 6P(fl) damage. *Smartlink.*

Phalanx Systems Vogeljäger II (Heavy Missiles): The Vogeljäger, or 'bird hunter', is a man-portable air-defense system (MANPADS). It features a top-mounted imaging scope with low-light and thermographic capability. While capable of firing any heavy missile available, the Vogeljäger was designed as an anti-air platform and receives a +1 DPM while firing at airborne targets and a -2 DPM while firing at non-airborne targets. When firing Anti-Air missiles, the Vogeljäger receives an additional +2 DPM. *Imaging Scope (Top, Low-Light, Thermographic).*

Scorpion (Scorpion Missiles): An evolution of the venerable Stinger platform, the Scorpion was created with off-the-shelf components in the early 2020's. It is a simple system comprised of a launch tube and a fold out sensor and sighting system. It is a short range surface-to-air missile.

Missiles - Guided explosive projectiles that can lock onto and track targets, fired from missile launchers.

Ares Ribble Anti-Structure Missile (Heavy Missile): The Ribble is a thermobaric warhead that employs a series of micro-charges to widely disperse its nanofuel payload before ignition. Ideal for enclosed spaces and urban com-

bat operations where its intense overpressure is more lethal than standard fragmentation or high explosive devices. The Ribble comes with an extensively field-tested guidance system with heat seeking capabilities that can pick out targets through doors and windows and follow up with an operator's choice of 3 delayed ignition settings. *Airburst Link, Heat Seeker.*

Missiles	SENSOR	DV	AP	BLAST	RANGE	AVAIL	WEIGHT	COST
Ares Ribble	2	28(F)	20.00	4,800¥				
LR SAM	4	5,000 m	1.50	2,200¥				
MTR	5	3,200 m	—	—	—			
Scorpion	2	—	10.00	—				

Flamethrowers - Flamethrowers project a stream of ignited flammable liquid or gas. They are devastating in close quarters and can ignite targets and environments.

Shiawase Arms Blazer: A handheld flamethrower with an attached fuel supply, negating the need for a bulky or vulnerable backpack system. The small fuel tank only carries enough fuel for 4 seconds of continuous use. Requires 1 Unload Action and 1 Load Action to replace the fuel tank with another.

Shiawase Arms Incinerator: The Incinerator is the first

flamethrower to be made entirely of synthetic polymers, resulting in a very lightweight and thermally resistant design, allowing it to operate longer and at higher temperatures without the operator having to worry about overheating. The recommended fuel mixture ensures complete combustion and a high temperature burn, available in quick change cylinder that function like a detachable magazine and provide enough pre-mixed, pressurized fuel for roughly 6 seconds of continuous flame. Includes a rail system for mounting accessories. *Tactical Rail (Under-barrel).*

Flamethrowers	ACC	DV	AP	MODE	RC	RANGE	AMMO	AVAIL	WEIGHT	COST
Aztechnology F3a										
Shiawase 6 Arms Blazer		10P(fl)	0	SS	0	Close	4(dm)	16(F)	2.75	300¥
Shiawase 4 Arms Incinerator		15P(fl)	0	SS	0	Near	6(dm)	16(F)	4.25	600¥

Laser Weapons - Laser weapons project concentrated beams of light to deliver thermal energy and essentially burn a hole in their target, or at least boil away some layers of armor. They operate off of Peak Discharge Battery Packs and are commonly found linked to a larger power source, especially if vehicle-mounted. All lasers suffer a reduction in their DV by 1 per range bracket their target lies beyond Close. They also suffer a DV reduction of 1 per Visibility Modifier encountered, as particulate matter in the air disrupts the cohesion of their beam. Lasers can accept top-mounted and underbarrel accessories or modifications unless otherwise noted, but they may never have barrel modifications or upgrades of any kind.

Note: All laser weapons listed with detachable magazines in their stat lines represent Peak Discharge Battery Packs providing 10 energy each, although each weapon in question may require more than 1 energy per shot.

Ares Archon Heavy MP Laser: The Archon is Ares' heaviest available laser weapon, resembling a medium or heavy machinegun. It must be supplied with an external power source, such as a Power Backpack or linked directly to a vehicle or even the local energy grid. The Archon consumes 4 energy with each shot. Comes standard with a bipod and a rail mount, along with an attachment point for a heavy tripod or a gyro-mount. *Bipod (Underbarrel), Tactical Rail (Top)*.

Ares Lancer MP Laser: An upgrade of the Ares MP III line of laser weaponry, the Lancer looks like a sci-fi laser rifle. It features a wire frame stock and a foregrip, despite its lack of a need for recoil compensation, as well as a tactical rail to mount a scope or other sighting devices and sensors. The Lancer feeds from two Peak Discharge Battery Packs, allowing partial reloads if needed, and

consumes 2 energy per shot; it may also be hooked up to a larger power supply if desired. *Foregrip, Stock, Tactical Rail (Top)*.

Ares Pulse Fire: The latest development in laser weaponry from Ares features rapid pulse technology. A single Interact with Device Action switches between normal, full power, semi-automatic fire and the rapid pulse, fully automatic fire that sacrifices on target damage for fully automatic laser fire. The pulse fire can be powered by two Peak Discharge Battery Packs, but is usually connected to a backpack or satchel-sized energy source. Normal fire mode consumes 2 energy per shot, while the Rapid Cycle consumes only 1 energy per shot. The cooling shroud around the barrel of this weapon prevents any barrel or underbarrel-mounted accessories or modifications. *Stock*.

Ares Redline: The Ares Redline is a limited production, pistol size weapon that has been the flagship of laser weaponry for years. It is capable of using Peak Discharge Battery Packs like a normal pistol would use detachable magazines, but also features a connection point for larger power supplies. The Redline consumes 1 energy power shot. Features a mounting rail for sight customization, and essentially a foregrip built into the frame for two handed firing if desired, even though as a laser weapon it has no need for recoil compensation. *Foregrip, Tactical Rail (Top)*.

Onotari Arms Assault laser: The Dragon's first man-portable laser weapon. Can accept power from 2 Peak Discharge Battery Packs or an external power source; consumes 2 energy per shot. Includes an integral smart-gun system. *Smartlink, Stock*.

Special & Exotic Weapons - A catch-all category for weapons that do not fit into standard classifications, ranging from chemical sprayers to microwave pain inducers.

Ares Cascade (Special): A slightly different take on the Ares SuperSquirt line, the Cascade fires a direct stream of DSMO instead of gel packs or capsules. Two canister-like magazines are inserted side-by-side where a regular rifle would have a magazine well; one is filled with DSMO, the other is filled with a drug or toxin. The combined canisters provide 100 'shots' worth of liquid. The Cascade's adjustable nozzle can vary the liquid stream from a forceful longer-ranged stream similar to the SuperSquirt-II, or a shorter-ranged wide spray like a shotgun blast. The CO2 canister in the stock that powers this rifle costs 50¥ to refill. Additional reservoir canisters can be acquired for 20¥ each. The Cascade may not mount any barrel-mounted accessories or modifications. *Stock.*

Ares ELD-AR (capsules): In use for decades by UCAS military and corp security as a training weapon, the Ares Encapsulated Liquid Delivery Assault Rifle uses compressed CO2 to fire gel bullets usually filled with brightly colored paint. It effectively has zero recoil and as much sound as a suppressed, sub-sonic SMG. Normal paint capsules can be purchased at 5¥ per 10 pack, and the CO2 canister in the buttstock can be refilled for 50¥. A special kit for manufacturing gel capsules with custom fillings may be purchased for 300¥. Cannot accept barrel-mounted accessories or modifications. *Stock.*

Ares S-II SuperSquirt (Special): The successor to the popular Ares SuperSquirt uses new developments in the storage of dimethyl sulfur oxides to store the gel reservoir in detachable magazines that hold double the capacity of the original. A similar reservoir parallel to the grip contains a toxin or drug. Additional reservoir magazines cost 10¥ and the CO2 tank can be refilled or replaced for 50¥.

Ares S-III SuperSquirt (gel packs): Firing DSMO gel packs to deliver contact vector toxins through skin absorption, the S-III SuperSquirt has been improved with an extended range and a tactical rail system to accept top-mounted and underbarrel accessories. *Stock, Tactical Rail (Top, Underbarrel).*

Fichetti Pain Inducer (Special): Fichetti's Pain Inducer functions as a microwave beam weapon that inflicts excruciating pain on the target. Treat hits by the Pain Inducer as a Power: 8, Speed: Immediate toxin that is resisted with a WIL Attribute Test; characters failing this test must make every attempt to move away from or avoid the beam. Subsequent Combat Rounds after a successful hit treat fire from the Pain Inducer as attempts to keep the beam on target; if this is successful the target suffers a Dice Pool Modifier to all Tests equal to the modified Power of the Pain Inducer for each Combat Round that it stays on target. After being struck by the Pain Inducer successfully and then interrupting or escaping the beam in any way, the target immediately hit with damage of 3S. The Pain Inducer can accept top-mounted and underbarrel accessories, and fires from an internal capacitor holding 10 shots worth of charge; this may be recharged at a rate of 1 per 10 seconds when hooked up to a power source, or wirelessly recharged via induction at a rate of 1 per hour.

FN-AAL Gyrojet Pistol (6mm Gyorjet): A commonly used sidearm of the British Special Boat Service, this Gyrojet pistol fires 6mm rockets that gyroscopically stabilize themselves through rotational venting of their propellant exhaust. Gyrojets exit the barrel at a low velocity and reach their peak speed and power once their propellant has been fully expended.

HK Icethrower (Special): The H&K Icethrower is a heavy pistol sized weapon that fires marble sized balls of ice in

short bursts. A large cylinder with a wide opening at the top, usually worn at the hip, is connected to the pistol with tubing to supply its ammunition. Snow deposited in this cylinder condenses into ice pellets momentarily with each half-kilogram of snow, roughly what a metahuman could pick up with a double handed scoop, providing enough ice for 3 bursts, or 9 'shots' of ammunition. The cylinder can hold a total of 3 kilograms of snow, or the equivalent of 54 ammunition to provide 18 bursts of fire. Scooping a double handful of snow into the condensing cylinder requires 1 Interact with Device Action. The system cannot operate without loose snow and it cannot operate in temperatures above 3 degrees Celsius.

Narcoject Gas Gun (Special): A spray gun from Narcoject designed to project a stream of their favored toxin at short distances. The Gas Gun uses a side-mounted bottle of compressed air and an underbarrel mounted bottle of your chosen Inhalation Vector toxin. The bottles hold enough compressed air and doses of toxin for 5 "shots"; each shot enough to target 1 person or a group of people close together and is enough gas to cover a small room. The gas dissipates after 2 Combat Rounds; at GM discretion factors such as size of the room, ventilation quality, or wind may disperse the gas slower or faster. The Gas Gun comes with an electric pump capable of refilling empty air bottles in 3 minutes.

Narcoject PEP (Special): The Narcoject PEP, or Pulsed Energy Projectile, is a specialized form of "non-lethal" weaponry that delivers a "stunning" shock via a series of rapid laser pulses. The first few pulses deliver enough energy to vaporize a thin layer of armor, clothing, or skin on the target creating an expanding cloud of plasma, while the rest of the pulses deliver enough energy to cause the plasma to explode before it can disperse. This entire process happens in a microsecond and the resulting pulse of energy is roughly equivalent to a small flashbang. The PEP uses Peak Discharge Battery Packs in place of ammunition and may accept both top-mounted and underbarrel modifications and accessories.

Narcoject Trackstopper (Special): When Ares began pulling back on non-essential weapons research, such as their Fogger Glop Cannon, Narcoject picked up the

name and research for a modest sum and developed the Trackstopper in its place. A submachinegun sized weapon with a hose connected to a backpack that somewhat resembles a flamethrower, but sprays liquid foam instead of fiery death. Narcoject foam hardens after 1 Combat Round; for every net hit achieved with an attack the target suffers a -1 AGI penalty. If the target's AGI is reduced to 0 they are incapable of movement or use of their limbs. Once hardened the Narcoject foam has a Structure Rating of 4 and an Armor Rating of 6. The foam is specially designed at a microscopic level to allow airflow so that the targets do not suffocate and once hardened it dissolves after 1 hour. Narcoject-brand solvent will dissolve the hardened foam immediately and is available for +100¥ per dose at Availability 9(R). The liquid foam itself is available in reload tanks providing 6 charges for +500¥ each at Availability 15(R). Reloading the Trackstopper's tanks by swapping an empty for a fresh tank is handled the same as detachable magazine changes, requiring 1 Reload Action. This usually requires another character to help, but the Trackstopper's user can reload themselves by first taking off the backpack with 1 Interact with Device Action, and after swapping the tanks they may put the backpack on again with 2 Interact with Device Actions. *Foregrip.*

Onotari Arms Slingshot (Capsules): An underbarrel weapon attachment that consists of a high-tech slingshot, its 10 round internal magazine, servos to reload and tension the slingshot band automatically, and a swivel joint that allows the weapon to pivot and shoot around corners; Onotari Arms recommends adding a guncam to see around corners and visually target those peek shots. This slingshot fires standard capsules and can be loaded up with paint rounds, poisons, nanites, acids, or anything else that can be delivered by capsule. The slingshot is inherently silent in its operation and comes with a rail mount to quickly be attached or detached; can only be fitted in the underbarrel slot of longarms such as rifles or shotguns. *Tactical Rail.*

Pepper Punch Pen (Special): A pen or digital stylus containing a canister of Pepper Punch. With the press of a button it sprays Pepper Punch or your choice of another Inhalation Vector Toxin up to 2 meters away.

Vehicular Weaponry - Heavy weapon systems designed specifically for mounting on vehicles, drones, or fixed emplacements. They are typically too heavy or require too much power to be man-portable.

AN/EDQ-12 Air Defense Naval Directed Energy Weapons System:

The “Andrews” naval laser was designed to down incoming guided missiles but also functions in a short range anti-aircraft and anti-ship role. It may only be mounted on naval vessels powered by a nuclear reactor, and is capable of firing 50 ‘shots’ before the system’s cooling mechanisms must be recharged and reset.

Ares Doru Launch System (Cruise Missiles): The Doru is a launch system designed to adapt to reinforced external hardpoints on most aircraft, and is capable of carrying and launching most cruise missiles available on the market.

Ares Medusa Point Defense Laser: A rapid fire, high

power laser system from Ares commonly found on naval vessels and in fixed emplacements. The Medusa is capable of engaging incoming missiles, artillery shells, and mortar rounds. Requires an external power source.

Ruhrmetall SFW-30 (): The latest in heavy anti-vehicle weaponry, the SFW-30 is designed for vehicles or large drone weapon mounts and does not come in a metahuman portable version, even the largest troll would find it difficult to wield a weapon system weighing nearly 80 kilos! The weapon is accompanied by a small underbarrel mount that fires locator projectiles that stick against the target’s armor. The main gun can then fire smart anti-vehicular ammunition that homes in on the previously fired target designator. The underbarrel weapon’s ammunition is available from the factory for +410¥ per 10 rounds at Availability 12(F), while the AV smartmunitions are available for +600¥ per 10 at the weapon’s Availability. *Smartlink, Trigger Removal, Underbarrel Weapon.*

Vehicular Bombs -

AGM-154 JSOW (Glide Bomb): The AGM-154 Joint Standoff Weapon is a 450 kg class bomb capable of extreme range gliding attacks and limited stealth capability. The launching aircraft can continuously supply this bomb with targeting updates as long as it maintains line of sight.

GBU-39 SBD (Glide Bomb): The GBU-39 Small Diameter Bomb is quite small for military ordnance with a 100 kilo warhead. However, it is capable of gliding to its target through GPS positioning, giving it a much greater range than conventional bombs. It was massively stockpiled prior to the Euro Wars and still widely available.

Vehicular Bombs	SENSOR	DV	AP	BLAST	RANGE	AVAIL	WEIGHT	COST
AGM-154 JSOW	2	35 km	26(F)	495.00	181,000¥			
GBU-39 SBD	3	10 km	16(F)	129.00	125,500¥			

Vehicular Rockets - Unguided rocket munitions designed to be fired from vehicular weapon mounts.

Ares Zuni IX: An unguided, aircraft-launched system from Ares designed to mate with most internationally utilized hardpoints. The Zuni IX is the latest in a venerable line of ordnance designs and its dual-purpose warhead

can handle most ground targets.

Cranston: A lightweight dumbfire rocket designed to be mounted in rocket pods or on light hard points. Intended for use by paramilitary forces, the Cranston has a low power high explosive warhead to mitigate collateral damage.

Vehicular Rockets	DV	AP	BLAST	AVAIL	WEIGHT	COST
Ares Zuni IX	20(F)	60.00	800¥			
Cranston	14(F)	5.00	800¥			

Vehicular Missiles - Heavy guided missiles intended for use by vehicles and aircraft, capable of engaging ground, air, or naval targets at extended ranges.

AA-8 Aphid/R-60 (Air-to-Air Missile): A prevalent Soviet short range missile that has been stockpiled across the globe for over a century. *Heat Seeker*.

AA-11 Archer/R-73 (Air-to-Air Missile): A Soviet-era infrared-guided missile with off-boresight capabilities. It has exceptional maneuverability and range. *Heat Seeker*.

AA-12 Adder/R-77 (Air-to-Air Missile): Another Soviet air-to-air missile, this one designed to be a counterpart to the West's AMRAAM.

AGM-65 Maverick (Air-to-Surface Missile): An ancient missile system that was over 60 years old when the Euro Wars started but still stockpiled in massive quantities.

AGM-114 Hellfire (Anti-Tank Missile): A laser guided anti-tank missile, and later precision strike missile for the earliest drone platforms. *Laser Guided*.

AIM-120 AMRAAM (Air-to-Air Missile): The Advanced Medium Range Air-to-Air Missile is the pinnacle of late 20th century aerial interceptor technology. The proliferation of this missile was worldwide, but many stocks were depleted in the Euro Wars and the conflicts preceding

them. The radar seeker in original models is somewhat dated compared to current technological standards, but the rest of the components still rival today's state of the art.

AIM-132 ASRAAM (Air-to-Air Missile): A UK designed short range air-to-air missile to complement the AMRAAM, the Advanced Short Range Air-to-Air Missile is a dogfighting missile with a much longer range than comparable missiles. It was designed to allow a pilot to fire and turn away, using its extended range to engage an enemy aircraft before they could launch missiles of their own.

Ares EMTACAR (Cruise Missile): This cruise missile from Ares is a precision attack weapon that features a tandem shaped-charge for penetrating any fortified bunker in existence.

Ares SA-53 (Surface-to-Air Missile): The SA-53 is more commonly found as a strategic counter-missile in vertical launch systems at ground installations or on large naval vessels. It has the ability to intercept high speed airborne targets at ranges approaching 20 kilometers. The SA-53's low cost allows it to be deployed en masse.

AT-11 Sniper/Refleks (Anti-Tank Missile): The 'Reflex' is a laser guided missile launched from the 125mm smooth-bore cannon of most Soviet tanks. *Laser Guided*.

AT-14 Spriggan/Kornet (Anti-Tank Missile): A Soviet anti-tank missile that features laser guidance and a pop-up attack capability. Comes in its own launching tube for storage and transport; may be easily fitted to a variety of vehicle-mounted launch systems and man-portable systems. *Laser Guided*.

AT-15 Springer/Khrizantema (Anti-Tank Missile): This missile, carried in launch tubes that can be mounted on armored vehicles, helicopters, or even drones, was designed to defeat modern heavy armor roughly 60 years ago. It is capable of targeting low flying and slower moving helicopters and drones as well. The 'Chrysanthemum' maintains supersonic speeds throughout its flight, making it somewhat harder to defeat with conventional countermeasures. *Laser Guided*.

AT-16 Scallion/Vikhr (Air-launched Anti-Tank Missile): The 'Whirlwind' is a highly accurate anti-tank missile from the Soviet era that can be deployed from helicopters and aircraft. It has a long range and reduced susceptibility to jamming. A fragmentation sleeve can make it an effective air-to-air weapon and even a thermobaric variant was developed for the ground attack role. *Laser Guided*.

BGM-71 TOW (Anti-Tank Missile): 'Tube launched, Optically Tracked, Wire Guided'. The TOW is an ancient missile that debuted over a century ago. It is somewhat underpowered against modern armored vehicles, but the wired in guidance system has received an uptick in popularity since it cannot be hacked. Stocks of this missile were nearly depleted after the Euro Wars, but interest has caused several new manufacturers to begin limited production and knock-offs. *Wire Guided*.

Brimstone (Air-to-Surface Missile): A Western European development to replace the aging Hellfire missiles that ultimately revealed an overpriced boondoggle. Primarily designed to be employed in triple rack packages on modern fighters and bombers, the Brimstone features both laser guidance and radar guidance modes, as well as a low collateral damage tandem-charge warhead for defeating armor. The more niche application and high cost ensured the USA and then UCAS's continued development of the Hellfire.

Inferno (Anti-Tank Missile): A missile designed to be fired from the main gun of modern armored vehicles. The Inferno can be fired from nearly any main gun by the use of various sized sabot sleeves. Highly accurate with an infrared seeker and capable of independent or command link guidance. The Inferno serves a dual purpose use; it is able to target low flying drones and helicopters in addition to other armored vehicles. Its shaped-charge warhead can penetrate the thick hides of most armored vehicles in use. *Heat Seeker*.

IRIS-T (Air-to-Air Missile): Germany's primary short range air-to-air missile leading up to the Euro Wars, the IRIS-T was designed for hyper-maneuverability via vectored

thrust. The off-boresight capability and the missile's maneuverability allow it to actually engage targets behind the launching aircraft. *Heat Seeker*.

Javelot Air Defense Missile (Anti-Air Missile): Designed for long range interception of aircraft, anti-ship missiles, and cruise missiles. It can also function in a lesser role as its own anti-ship missile.

Magic IV (Air-to-Air Missile): The leading French designed short and medium range fire-and-forget missile.

Meteor (Air-to-Air Missile): A long-range radar-guided air-to-air missile that was truly ahead of its time, thanks to a ramjet engine in place of the standard rocket motors of comparable missiles.

Regulus 68 (Cruise Missile): A cost-effective cruise missile designed to eliminate maneuver forces with a submunition payload over a large area. The Regulus may deal blast damage spread over two adjacent range brackets, at GM discretion. The Regulus is capable of being piloted as a jumped in drone; treat as Handling +3, Acceleration 100/400, Speed 500, Piloting 3, Body 6, Armor 6, and Sensors 4.

RIM-248 Bulwark (Surface-to-Air Missile): The Bulwark is a VLS employed weapon that requires multiple systems of phased radar and scanner arrays for guidance, but has an impressive sensor package of its own. Even more impressive is the 55 km range of its interception envelope. The Bulwark is ideal for long ranged aircraft interception, and even has limited use as a ballistic missile interceptor.

SS-N-49 Sirocco (Anti-Ship Missile): Developed from the lone line of Russian anti-shipping weaponry of past, these anti-ship missiles have been sold around the world and see extensive use despite their age.

Stealth Shadow (Cruise Missile): A licensed production of one of the United Kingdom's premiere cruise missiles. The Stealth Shadow is a first strike capable weapon designed to eliminate air defenses in a Euro Wars size conflict. Its radar-absorbent coating and low-level flight profile allow it to evade most early-warning systems and countermeasures before its fragmentation warhead destroys most equipment in a reasonable radius from the detonation point. *Signature Masking Rating 3, Targeting (Cruise Missile) Rating 2*.

Taurus KEPD 400 (Cruise Missile): A cruise missile launched from aircraft that was extensively used by European forces in the Euro Wars. Dual 500 kg warheads with delayed fuses combined with clearing charges to remove soil or other obstructions give the KEPD 400 massive potential for a 'bunker buster'. *Clearsight Rating 2, Targeting (Cruise Missile) Rating 2*.

UGM-188 Sea Saber ASM (Anti-Ship Missile): Originally developed for the UCAS Navy but now employed by their neighbors and allies. Highly maneuverable and intelligent.

UIM-199 Kingfisher SSAM (SubSurface-to-Air Missile):
The Kingfisher was designed to counter air threats by a submerged submarine. It can be fired from a standard torpedo tube or from a vertical launch cell. The small size

of these missiles allow two to fit inside one vertical launch cell. To fire, a submarine must be within 50 meters of the surface.

Vehicular Torpedoes - Underwater propelled weapons designed to be fired from naval vessels or submarines.

Mark 197 Multi-Role Advanced Capability Torpedo:

The Mark 197 MADCAP was the most commonly used torpedo of the 2050's, capable of travelling at 75 knots with an active sonar seeker warhead. Variants were equipped with passive sonar or heat seeking warheads. Standard MADCAPs are wire-guided and easily controlled remotely, unless their wires are cut.

Mercury Riptide: A 533mm diameter supercavitating torpedo capable of sustaining 250 knot speeds for 3 minutes. Systems within the torpedo project a bubble of gas that envelopes it while moving through water, allowing it to achieve blistering acceleration and top speed. Perfectly capable of swiftly eliminating close targets. Nominally has a 12 kilometer range with customizable payload and guidance options. Stats given are for Mercury's standard guidance package and HE warhead.

Vehicular Torpedoes	SEN	MAN	DV	AP	BLAST	RANGE	AVAIL	WEIGHT	COST

Mercury Riptide	3	24(F)	800.00	450,000¥					

Ammunition:

Firearms use a specific type of cartridge; this is the ammunition they fire, or the specific ammunition they are chambered for. Many firearms share what cartridge they are chambered in, but this does not always mean they will function identically. There are a plethora of reasons why the same cartridge could function differently: it may be optimized for a specific barrel length or rifling twist rate, the same cartridge may have different loadings that differ on bullet weights, bullet types, or the amount of powder in the case. Otherwise identical ammunition may have slight differences between manufacturers based on the

type of gunpowder or propellant used, how the bullet itself is seated in the case, the type of primer used to ignite the propellant, or even how precisely the maker measured the weight of the components. All of these differences go a bit beyond what is to be expected in a Role Playing Game, but where possible and prudent they will be taken into consideration. Following is a list of cartridges (some real world, some entirely made up for Shadowrun) that are used by the various firearms presented in this document. Their characteristics and statistics are given in their most standard loadings or an averaged representation, or sometimes even as an educated guess, and these values have been

abstracted into the damage codes presented with each individual weapon listing, subject to weapon specifics and characteristics such as barrel lengths.

Cartridge	Case	Weight (gr)	Velocity (m/s)	BC	Energy (J)

I. MAGIC: The Awakened Gaiasphere

Magic is volatile, reacting to the background count and the emotional resonance of the world.

1. Spellcasting & Drain Calculations Drain is resisted with Willpower + Tradition Attribute (Logic or Charisma). If the modified Drain Value exceeds the character's Magic

Rating, the Drain is Physical Damage instead of Stun Damage.

Learning Spells: New Spells cost 5 Karma to learn. Magicians learn spells from formula patterns or mentor spirits. Each downtime period a character may learn 1 new Spell.

Spell Category	Example Spell	Type	Range	Duration	Drain Calculation	Description
Combat	Manabolt	Mana	LOS	Instant	Force - 2	Direct damage to target's soul. Resisted by ESS + WIL.
Combat	Powerbolt	Physical	LOS	Instant	Force - 1	Direct physical damage to target's body. Resisted by BOD + Armor.
Combat	Nanite Ball (Fireball)	Physical	LOS	Instant	Force	Ignites ambient grey goo. Resisted by BOD + Armor. AP = Force.
Health	Heal	Mana	Touch	Permanent	Force - 4	Heals Physical boxes equal to hits. Force must equal or exceed damage.
Illusion	Improved Invisibility	Physical	LOS	Sustained	Force - 1	Bends light and fools nanite-sensors. Resisted by INT + Logic.
Illusion	Trid Phantasm	Physical	LOS	Sustained	Force	Creates multi-sensory illusions that affect machines and living beings.
Illusion	Confusion	Mana	LOS	Sustained	Force - 1	Target suffers negative dice pool modifier to all actions.
Illusion	Mass Confusion	Mana	LOS(A)	Sustained	Force + 1	AoE version of Confusion.
Illusion	Chaos	Physical	LOS(A)	Sustained	Force + 1	Creates chaotic physical sensory input, affecting machines and living targets.

Spell Category	Example Spell	Type	Range	Duration	Drain Calculation	Description
Illusion	Agony	Mana	LOS	Sustained	Force	Target suffers intense pain and Stun damage. Resisted by WIL + LOG.
Manipulation	Control Actions	Mana	LOS	Sustained	Force	Puppets the target's physical body. Resisted by WIL + LOG.
Manipulation	Armor	Physical	LOS	Sustained	Force - 1	Adds magical armor rating equal to hits.
Manipulation	Barrier	Physical	LOS(A)	Sustained	Force	Creates a physical barrier of magical energy.
Manipulation	Levitate	Physical	LOS	Sustained	Force	Moves target telekinetically.
Manipulation	Petrify	Physical	LOS	Sustained	Force + 2	Turns living tissue to stone.
Detection	Mind Probe	Mana	Touch	Sustained	Force	Reads target's surface thoughts or deep memories.

2. Conjuring & Summoning Spirits

Magicians can summon Canonical Spirits (Elementals, Spirits of Man, etc.) from the Astral Plane to aid them.

Summoning Mechanics:

- **The Test:** To summon a spirit, the Magician rolls **Conjuring + Magic** versus the Spirit's **Force**.
- **Net Hits:** Each net hit generated by the Magician equals one "Service" the spirit owes.
- **Drain:** The Magician must resist Summoning Drain equal to twice the Spirit's hits on the opposed test. This Drain is resisted with Willpower + Tradition Attribute. If the Force of the spirit exceeds the Magician's Magic Rating, the Drain is Physical Damage instead of Stun Damage.
- **Services:** Services can include participating in

combat, sustaining a spell, concealing the party, or using a specific spirit power. A summoned spirit remains bound to the physical plane until its services are exhausted, or until the next sunrise or sunset, whichever comes first.

- **Glitches:** A Glitch on a summoning test means the spirit demands an immediate offering (Karma or an item) before serving. A Critical Glitch results in the spirit manifesting as hostile and immediately attacking the summoner.

3. Adept Powers & Metamagic

Adept powers are fueled by the adept's Magic Rating and Power Points (PP). Adepts receive Power Points equal to their Magic Rating at character generation. They can also acquire more by initiating.

Power / Metamagic	Type	Cost	Mechanical Effect
Improved Reflexes	Adept	1.5 PP / Lvl	+1 Reaction, +1 Initiative Die (Max +3).

Power / Metamagic	Type	Cost	Mechanical Effect
Killing Hands	Adept	0.5 PP	Unarmed attacks deal Physical damage and can bypass magical armor/astral forms.
Critical Strike	Adept	0.5 PP	+1 Damage to melee attacks.
Improved Ability	Adept	0.5 PP / Lvl	+1 Die to a specific physical or combat skill.
Enhanced Senses	Adept / Spirit	0.25 PP	Gains low-light, thermographic, improved hearing, etc.
Danger Sense	Adept	0.25 PP / Lvl	+1 Die to Surprise tests and avoiding ambushes.
Concealment	Spirit	N/A	Conceals target from sight and sensors.
Animal Control	Spirit	N/A	Controls animal behavior.
Guard	Spirit	N/A	Protects target from accidents and environmental hazards.
Fear	Spirit	N/A	Induces magical terror in target, causing them to flee or freeze.
Natural Weapon	Creature	N/A	Physical attack like claws or bite (DV varies, typically STR+1 or STR+2).
Shift	Creature	N/A	Transforms into an animal form (e.g., Jaguar).
Essence Drain	Creature	N/A	Drains Essence from a victim to heal or empower the creature.
Infection (HMHVV)	Creature	N/A	Transfers the HMHV virus through essence drain or physical contact.
Dual Natured	Creature	N/A	Exists in both physical and astral planes simultaneously.
Mist Form	Creature	N/A	Transforms into an invulnerable, gaseous mist.
Regeneration	Creature	N/A	Rapidly heals physical damage every combat round.
Immunity to Normal Weapons	Spirit	N/A	Heavy armor against non-magical attacks, reducing incoming damage significantly.
Centering	Metamagic	Initiation	Add Initiate Grade to Drain Resistance tests.
Wild Channeling	Metamagic	Initiation	Allows the adept to voluntarily turn up to their Initiate Grade of dice into Wild Dice on combat tests.
Masking	Metamagic	Initiation	Hide your true Magic rating and aura from Assensing tests.

Power / Metamagic	Type	Cost	Mechanical Effect
Shielding	Metamagic	Initiation	Add your Initiate Grade to Counterspelling dice pools.

Initiation & Submersion: Initiation and Submersion for characters costs 10 + (Initiation Grade x 5) Karma and 10 + (Submersion Level x 5) Karma respectively. A character may choose to undergo an ordeal to reduce this cost by 10% to 20%.

4. Ritual Spellcasting

Rituals rely heavily on sympathetic links and the local Background Count. The process requires a physical space prepared with a Magical Lodge, appropriate to the tradition and force of the spell.

The Ritual Process:

- Choose Leader and Assistants:** A single Leader directs the spell. Other participants act as Assistants.
- Determine Force:** The Force of the ritual must be chosen, limited by the Leader's Magic Rating and the Lodge's Rating.
- Establish Link:** The material link provides the sympathetic connection to the target across distance.
- Execution:** The ritual takes (Force) hours to complete. A teamwork test is made, and the total hits dictate the ritual's effectiveness.

Ritual Element	Rule / Mechanic
Material Link	A physical piece of the target (blood, hair) or deeply guarded personal data (SIN, true name). Degrades over time (-1 Die per week old).
Teamwork	Leader rolls Ritual Spellcasting + MAG. Assistants add hits to the Leader's pool.
Execution	Takes (Force) Hours. Wild Dice equal to the Background Count must be rolled. A Glitch causes the ritual to backfire, dealing Drain to all participants.

II. MATRIX: The Nanite Grid

Cold sim is dead. AR is limited. All real hacking is DNI Hot-Sim, putting your brain and soul on the line.

Device Type	Example Model	Device Rtg	A / S / D / F	Base Cost (¥)	Description
Commlink	MetaLink (Burner)	1	0 / 0 / 1 / 1	100	Basic AR interface. No DNI capability.
Commlink	Hermes Ikon	5	0 / 0 / 5 / 5	3,000	High-end commlink. Can host basic DNI but cannot hack.
Commlink	Transys Avalon	6	0 / 0 / 6 / 6	5,000	The pinnacle of consumer electronics, nearly flawless firewall for regular users.

Device Type	Example Model	Device Rtg	A / S / D / F	Base Cost (¥)	Description
Bio-Deck	Microtrónica Azteca 200	2	4 / 3 / 2 / 1	25,000	Budget cyberdeck. Often retrofitted with stolen military parts by gangers.
Bio-Deck	Renraku "Shinobi"	3	5 / 4 / 3 / 2	45,000	Entry-level hot-sim deck. Configurable Array.
Bio-Deck	Fairlight Paladin	6	8 / 7 / 6 / 6	150,000	Military-grade. Interfaces directly with gaiasphere anomalies.

Cyberdeck Programs Active programs take up a program slot on a cyberdeck. Swapping a program is a Free Action. Programs act as localized rules-overrides or dice pool modifiers for your **DNI** connection.

Program	Type	Effect
Browse	Common	Cuts Matrix Search time in half.
Edit	Common	+2 Dice to Edit File actions.
Encryption	Common	+1 to Firewall.
Signal Scrub	Common	Reduces Background Noise penalties by 2.
Toolbox	Common	+1 to Data Processing.
Virtual Machine	Common	Adds 2 additional program slots, but you take 1 unresisted Matrix damage whenever you take Matrix damage.
Armor	Hacking	+2 to resist Matrix damage.
Biofeedback	Hacking	Your Matrix attacks deal Biofeedback damage (Stun or Physical depending on target's sim module).
Blackout	Hacking	Similar to Biofeedback, but only deals Stun damage.
Decryption	Hacking	+1 to Attack rating.
Defuse	Hacking	+4 Dice to resist Data Bomb damage.
Exploit	Hacking	+2 to Sleaze rating.
Stealth	Hacking	+1 to Sleaze rating.

2. Matrix Actions & Tethers in Combat Tethers replace Marks. They are two-way sympathetic soul-links.

Matrix Action	Opposed Test	Tether Req.	Effect & Combat Mechanics
Establish Tether (Hack on the Fly)	LOG + Hacking vs. WIL + Firewall	None	Creates 1 Tether. You gain +1 Die on all future actions against the target per Tether.
Data Spike	LOG + Cybercombat vs. INT + Firewall	None	Deals (Attack Rtg + Net Hits + 2 per Tether) Matrix Damage.

Matrix Action	Opposed Test	Tether Req.	Effect & Combat Mechanics
Neural Purge (Digital)	WIL + BOD	1	The Antibody floods a Tethered target with raw gaiasphere noise. Damage is 8 Stun (Biofeedback). Take control of a device/drone. Requires 1 Tether for simple device interactions, 2 for standard actions, 3 for complex tasks requiring multiple Actions.
Control Device	LOG + Electronic Warfare vs. WIL + Firewall	1 to 3	
Crack File	LOG + Hacking vs. INT + Firewall	1	
Disarm Data Bomb	LOG + Software vs. Device Rating x 2	1	Remove encryption from a file.
Edit File	LOG + Computer vs. INT + Firewall	1	Disarm a Data Bomb. If you fail, it detonates.
Enter/Exit Host	None	None	Create, change, copy, or delete a file.
Format Device	LOG + Computer vs. WIL + Firewall	3	Enter or exit a Host. Entering requires you to have a Tether on the Host.
Matrix Perception	INT + Computer	None	Device reboots at the end of the combat turn and its OS is wiped.
Matrix Search	INT + Computer	None	Spot hidden icons, analyze targets, or check your own OS.
Reboot Device	LOG + Computer vs. WIL + Firewall	3	Search the Matrix for information. Takes 1 minute (Basic) or 1 hour (Detailed).
Send Message	LOG + Computer	None	Target device reboots, clearing all Tethers and OS.
Snoop	LOG + Electronic Warfare vs. LOG + Firewall	1	Send a text, audio, or video message to a target you have a Tether on, or broadcast locally.
Spoof Command	LOG + Hacking vs. LOG + Firewall	1	Intercept Matrix traffic to or from the target.
Glitches & Tethers	Passive Consequence	N/A	Send a command to a device pretending to be its legitimate owner. Requires 1 Tether on the owner.
			If you Glitch on any Matrix Action while you hold a Tether on a target, the target gets a free blast of Biofeedback against you (Damage = target's Firewall, resisted by WIL).

3. Hosts & IC (Immune Responses) Hosts represent dedicated nexuses in the nanite-Matrix. Instead of distinct corporate grids floating in virtual reality, Hosts are localized data-hives physically anchored to specific geography or high-density ley lines.

Host Ratings:

- **Ratings 1-3 (Local):** Small business servers, personal comm-networks, smart homes.
- **Ratings 4-6 (Commercial):** Regional corporate hubs, large retail centers, local security grids.
- **Ratings 7-9 (Enterprise):** Major corporate division headquarters, secure government databases.
- **Ratings 10-12 (Black Site):** Megacorporate zero-

zones, experimental gaisphere nodes (e.g., Wuxing Null-Sites).

A Host uses its Rating to calculate its Matrix Attributes (typically Rating, Rating + 1, Rating + 2, and Rating + 3, distributed by the GM as needed based on the Host's purpose). IC programs use the Host's Rating x 2 for their Dice Pools.

Entity	Concept in the 6th World	Mechanics
Host	Localized Nanite Hive	Hosts do not have fixed grids; they are tied to physical locations or ley lines. Ratings 1-12.
Patrol IC	"White Blood Cells"	Rolls Host Rtg x 2 to spot intruders. Does not attack, but alerts the Hive.
G.O.D. Manifestation	"The Antibody"	Summoned immediately if a hacker rolls a 1 on a Wild Die. Manifests as an angry, dual-natured Sprite/Spirit.

3. Host Architecture & Intrusion Countermeasures (IC) The Matrix is merged with the physical environment, meaning "Hosts" are no longer purely digital constructs floating in virtual space. A Host is a localized, biological biome of nanites and living crystal physically anchored in meatspace (a "Data-Hive").

- **Entering a Host:** You don't just "jack in" from across the world. A hacker must establish a tether to the physical perimeter of the Data-Hive or physically enter the nanite-saturated area. The Host's Rating (1-10) dictates its Firewall, Data Processing, and the physical density of the grey goo defending it.
- **Host Ratings & Attributes:**
 - **Low (Rating 1-3):** Local mom-and-pop shops, gang hideouts. The nanites are sparse, mostly functioning as AR tags and basic security.
 - **Medium (Rating 4-6):** Corporate offices, secure facilities. The air is thick with glowing dust; the environment actively responds to authorized users.
 - **High (Rating 7-9):** Black sites, zero-zones. The walls themselves are composed of living crystal and data. The environment is actively hostile to intruders.
 - **Apex (Rating 10):** God-tier constructs. The Host is indistinguishable from reality, bending physical laws within its perimeter.

Intrusion Countermeasures (IC) IC are not just digital avatars; they manifest physically as Dual-Natured entities formed from the ambient nanites. They can attack a hacker's persona via the tether or physically strike their meat-body.

- **Patrol IC ("Seeker Moths"):** Swarms of lumines-

cent nanite-moths that flutter through the physical space of the Host, scanning for unauthorized tethers. If they spot a hacker, they alert the Host and attempt to attach themselves, placing a Tether on the intruder.

- **Killer IC ("Neon Hounds"):** Ferocious, canine-shaped constructs of jagged hard-light and crystal. They hunt down intruders and deal Stun Biofeedback damage.
- **Black IC ("Necrophages"):** Horrifying, insectoid monstrosities that latch onto a hacker's physical body or digital persona. They deal Physical damage and attempt to permanently sever the hacker's connection, causing severe Dumpshock and Essence drain.
- **Data IC ("The Librarians"):** Passive constructs that manage and encrypt the Host's data. If attacked, they deploy localized EMP bursts or attempt to scramble the hacker's cyberdeck.

3. Host Architecture & Intrusion Countermeasures (IC) The Matrix is merged with the physical environment, meaning "Hosts" are no longer purely digital constructs floating in virtual space. A Host is a localized, biological biome of nanites and living crystal physically anchored in meatspace (a "Data-Hive").

- **Entering a Host:** You don't just "jack in" from across the world. A hacker must establish a tether to the physical perimeter of the Data-Hive or physically enter the nanite-saturated area. The Host's Rating (1-10) dictates its Firewall, Data Processing, and the physical density of the grey goo defending it.
- **Host Ratings & Attributes:**
 - **Low (Rating 1-3):** Local mom-and-pop shops,

- gang hideouts. The nanites are sparse, mostly functioning as AR tags and basic security.
- **Medium (Rating 4-6):** Corporate offices, secure facilities. The air is thick with glowing dust; the environment actively responds to authorized users.
- **High (Rating 7-9):** Black sites, zero-zones. The walls themselves are composed of living crystal and data. The environment is actively hostile to intruders.
- **Apex (Rating 10):** God-tier constructs. The Host is indistinguishable from reality, bending physical laws within its perimeter.

Intrusion Countermeasures (IC) IC are not just digital avatars; they manifest physically as Dual-Natured entities formed from the ambient nanites. They can attack a hacker's persona via the tether or physically strike their meat-body.

- **Patrol IC ("Seeker Moths"):** Swarms of luminescent nanite-moths that flutter through the physical space of the Host, scanning for unauthorized tethers. If they spot a hacker, they alert the Host and attempt to attach themselves, placing a Tether on the intruder.
- **Killer IC ("Neon Hounds"):** Ferocious, canine-shaped constructs of jagged hard-light and crystal. They hunt down intruders and deal Stun Biofeedback damage.
- **Black IC ("Necrophages"):** Horrifying, insectoid monstrosities that latch onto a hacker's physical body or digital persona. They deal Physical damage and attempt to permanently sever the hacker's connection, causing severe Dumpshock and Essence drain.

- **Data IC ("The Librarians"):** Passive constructs that manage and encrypt the Host's data. If attacked, they deploy localized EMP bursts or attempt to scramble the hacker's cyberdeck.

III. RIGGING & VEHICLES: The Ghost in the Shell

Vehicles and drones are saturated with grey goo. Rigging is a deep, instinctual merge with the machine's pseudo-Essence.

Design Doc: Rigging in the 6th World In the Merged World, vehicles are no longer purely mechanical constructs; the pervasive nanites have woven a localized pseudo-Essence into their chassis. To pilot these machines optimally, a Rigger doesn't just connect via standard AR or VR—they immerse themselves entirely, their own biological Essence tangling with the digital ghost inhabiting the machine.

- **Drone Command & Tethers:** Because the Matrix is permanently merged with the Gaiasphere, commanding drones remotely requires establishing a Tether to the drone's localized network. Issuing commands is a Simple Action, but doing so while dealing with high background counts or Noise (such as in areas saturated with anomalous goo) may require substituting standard dice with **Wild Dice**.
- **The Pseudo-Essence Cost:** Machines lack true souls, but their nanite saturation mimics one. Riggers connecting via **DNI Hot-Sim** (Jumping In) share a neural and spiritual link with this pseudo-Essence. This grants unparalleled control, bypassing mechanical latency, but any physical trauma inflicted upon the vehicle violently resonates back to the rigger as Stun Biofeedback.

Vehicle/Drone Type		Hand/Speed	Accel	BOD	ARM	SENS	Cost (¥)
Horizon Flying Eye MCT	Micro-Drone	4 / 3	2	1	0	3	2,000
Fly-Spy	Drone	4 / 3	2	1	0	3	2,000
Aztechnology Crawler	Mini-Drone	4 / 3	1	2	2	3	4,000
Lockheed Optic-X2	Small Drone	4 / 4	2	2	2	4	21,000
MCT Nissan	Medium Drone	5 / 3	1	4	4	3	5,000
Doberman Ares Duelist	Combat Drone	3 / 3	2	4	4	3	4,500

Vehicle/Drone	Type	Hand/Speed	Accel	BOD	ARM	SENS	Cost (¥)
Steel Lynx Combat Drone	Heavy Drone	5 / 4	2	6	12	3	25,000
Dodge Scoot	Scooter	4 / 3	1	4	2	1	3,000
Yamaha Growler	Off-Road Bike	5 / 4	2	5	4	1	5,000
Suzuki Mirage	Racing Bike	5 / 6	3	5	4	2	8,500
Ford Americar	Sedan	4 / 4	2	11	6	2	16,000
Toyota Gopher	Pickup Truck	5 / 4	2	14	8	2	25,000
Ares Road-master	Armored Transport	3 / 3	1	18	18	3	52,000
GMC Banshee	T-Bird / LAV	5 / 8	4	16	18	5	250,000

Pool modifier to all actions for (12 - WIL) minutes.

2. Jumped-In Mechanics & Chase Combat Jumping In (Control Rig Integration)

A Rigger with a Control Rig (Rating 1-3) can "jump into" a nanite-infused vehicle equipped with a Rigger Interface. This acts as a DNI Hot-Sim connection, merging the Rigger's consciousness with the vehicle's pseudo-Essence.

- **Dice Pool Bonus:** The Rigger adds their Control Rig rating to all Vehicle skill checks (Piloting, Gunnery, Sensors).
- **Threshold Reduction:** The Threshold for any Vehicle test is reduced by the Control Rig rating (to a minimum of 1).
- **Initiative:** While jumped in, the Rigger uses Matrix Initiative (Data Processing + Intuition) and gains +1 Initiative Die per level of their Control Rig.

Bio-Feedback & Destabilization

Because the vehicle is saturated with grey goo, it possesses a pseudo-Essence that the Rigger connects to on a spiritual level.

- If the vehicle takes Physical damage, the Rigger must resist half of that damage (rounded down) as Stun Biofeedback. This is resisted with **WIL + BOD**.
- If the vehicle's Condition Monitor is filled and it is destroyed while the Rigger is jumped in, the Rigger suffers severe Dumpshock, immediately taking 6 unresistable Stun damage and suffering a -2 Dice

Chase Combat

Chases are high-stakes affairs that abstract exact speeds into Range Bands: Close, Short, Medium, Long, and Extreme.

- **The Chase Turn:** At the start of a Combat Round where a chase is occurring, all participating drivers make an Opposed **Pilot + Reaction** test. The net hits determine if a vehicle moves up or down a Range Band relative to their target.
- **Chase Maneuvers:** Drivers can spend their Complex actions during their Initiative pass to attempt specific maneuvers:
 - *Catch Up / Break Away:* An opposed Pilot test to force a shift in Range Band.
 - *Evade:* The driver adds their Vehicle's Handling rating to their Defense Pool against incoming attacks for the round.
 - *Ram:* An opposed Pilot test. If successful, both vehicles take Physical damage based on the ramming vehicle's Body + Speed. However, the vehicle with the higher Body + Armor resists the damage with double their dice pool, and halves the final damage taken (ensuring heavier vehicles win crashes).
 - *Cut Off:* Attempted at Close or Short range. An opposed Pilot test to force the target vehicle to make a Crash Test.

Mechanic	Rule / Application
Control Rig Integration	Rating 1-3. Jumping in acts as DNI Hot-Sim. The Rigger adds their Control Rig rating to all vehicle action Dice Pools and reduces all Thresholds by the Rig rating (minimum 1).
Bio-Feedback	Because the vehicle is nanite-infused, it has a pseudo-Essence. If the vehicle takes physical damage, the rigger must resist half that damage (rounded down) as Stun Biofeedback (Resist with WIL + BOD).
Chase Combat	Opposed Pilot + Reaction tests. Net hits determine range bands (Close, Short, Medium, Long, Extreme). Drivers can spend Complex actions to attempt maneuvers (Cut Off, Ram, Evade).

Modification	Slots	Cost (¥)	Description
Armor Plating	1	2,000	Adds +2 to the vehicle's Armor Rating. Can be taken multiple times.
Rigger Interface	1	1,000	Allows a rigger to jump into the vehicle using a Control Rig. Required for jumping in.
Weapon Mount (Standard)	2	2,500	Mounts an Assault Rifle or smaller weapon. Requires Gunnery skill to fire.
Weapon Mount (Heavy)	4	5,000	Mounts heavy weapons (LMG, HMG, Assault Cannon). Requires Gunnery skill.
Smuggling Compartment	1	1,500	A hidden compartment. Imposes a -4 penalty on Perception checks to find it.
Spoofing Emitters	2	4,000	Emits false sensor data. Grants a +2 bonus to tests to resist being locked onto.

4. Drone Swarms Rather than controlling dozens of drones individually, a rigger or decker can slave multiple identical drones into a **Swarm**. The swarm acts as a single entity in combat, distributing processing power and sensor data to act with lethal synchronization.

- **Swarm Count:** A swarm tracks its size via a `swarm_count` integer (representing the number of active drones in the formation).
- **Attack Bonus:** A swarm gains an attack pool bonus equal to $(+ \text{swarm_count} - 1)$. A swarm of 5 drones gains a +4 bonus to Gunnery or Melee attack rolls.
- **Damage Soaking:** Instead of tracking damage for each individual drone, the swarm soaks physical

damage collectively. If the swarm takes physical damage that fills its Physical Track, it is not destroyed. Instead, the `swarm_count` is reduced by 1 (representing a destroyed drone), and the Physical Track is instantly cleared.

IV. GENERAL EQUIPMENT & LIFESTYLE

Tech is advanced, but biological purity (Essence) is heavily commodified.

1. Augmentations (Cyberware & Bioware) Losing >2 Essence risks the “Augmentation Addict” Negative Quality.

Upgrading 'Ware/Decks: Players may upgrade their existing cyberware, bioware, or cyberdecks by simply paying the difference in Nuyen/Essence cost, representing modular swapping rather than selling at a total loss.

Augmentation	Type	Essence	Cost (¥)	Effect
Datajack	Cyber	0.1	1,000	Provides DNI. Required for all Hot-Sim/Matrix active skills.
Wired Reflexes I	Cyber	2.0	39,000	+1 Reaction, +1 Initiative Die. Cannot stack with Adept Powers.
Wired Reflexes II	Cyber	3.0	149,000	+2 Reaction, +2 Initiative Dice.
Wired Reflexes III	Cyber	5.0	217,000	+3 Reaction, +3 Initiative Dice.
Muscle Replacement (Rtg 1-4)	Cyber	1.0 / Lvl	25,000 / Lvl	+1 STR and +1 AGI per rating level.
Reaction Enhancers (Rtg 1-3)	Cyber	0.3 / Lvl	13,000 / Lvl	+1 Reaction per rating level.
Skillwires (Rtg 1-6)	Cyber	0.1 / Lvl	20,000 / Lvl	Allows use of chipped activesoft skills up to its rating.
Skilljack	Cyber	0.1 / Lvl	20,000 / Lvl	Allows use of chipped knowsofts and linguasofts up to its rating.
Control Rig (Rtg 1-3)	Cyber	1.0 / Lvl	43,000 / Lvl	Grants DNI and +1 to vehicle tests per level. Required for jumping in.
Bone Lacing (Plastic)	Cyber	0.5	8,000	+1 Body for damage resistance, unarmed attacks deal Physical damage.
Bone Lacing (Aluminum)	Cyber	1.0	18,000	+2 Body for damage resistance, unarmed attacks deal +1 Physical damage.
Bone Lacing (Titanium)	Cyber	1.5	30,000	+3 Body for damage resistance, unarmed attacks deal +2 Physical damage.
Cyberarm / Cyberleg	Cyber	1.0	15,000	Replaces arm or leg. Can be customized with increased STR/AGI.
Cyberhand / Cyberfoot	Cyber	0.25	5,000	Replaces hand or foot.
Cybereyes (Rtg 1-4)	Cyber	0.2 / Lvl	5,000 / Lvl	Replaces eyes. Capacity for vision enhancements (e.g., Vision Mag, Low-Light).
Cyberears (Rtg 1-4)	Cyber	0.2 / Lvl	3,000 / Lvl	Replaces ears. Capacity for audio enhancements (e.g., Audio Enhance, Dampener).

Augmentation	Type	Essence	Cost (¥)	Effect
Smartlink	Cyber	0.2	4,000	Integrates weapon targeting with user's vision. +2 Dice to attacks with Smartguns. Integrated laser weapon concealed in the forearm. Deals 6P damage, AP -4. Retractable monofilament whip housed in a cyber-finger. Deals 12P damage, AP -8, High risk of self-amputation. Adds +1 to Armor Rating per level. Provides 1 hour of internal breathable air per rating. Small hidden compartment in a finger for a data chip or single pill. Hidden compartment in the body, capable of holding a small pistol or similar item. A built-in grapple gun with 30m of micro-wire.
Hand Laser	Cyber	0.3	25,000	
Monowhip Fingertip	Cyber	0.4	40,000	
Dermal Plating (Rtg 1-6)	Cyber	0.5 / Lvl	10,000 / Lvl	
Internal Air Tank (Rtg 1-3)	Cyber	0.25	4,500 / Lvl	+1 Reaction, +1 Initiative Die. Lower Essence cost, highly illegal. +2 Reaction, +2 Initiative Dice. +3 Reaction, +3 Initiative Dice. +1 Die to Social skills per rating level. +1 Agility per rating level. +1 Strength per rating level.
Fingertip Compartment	Cyber	0.1	3,000	
Smuggling Compartment	Cyber	0.2	7,500	
Grapple Gun (Internal)	Cyber	0.5	5,000	
Synaptic Booster I	Bio	0.5	95,000	Energy-absorbent weave under the skin. +1 Armor per rating level. Genetically tailored micro-organisms. +1 to downtime healing tests per level.
Synaptic Booster II	Bio	1.0	190,000	
Synaptic Booster III	Bio	1.5	285,000	
Tailored Pheromones	Bio	0.2 / Lvl	30,000 / Lvl	
Muscle Toner (Rtg 1-4)	Bio	0.2 / Lvl	32,000 / Lvl	
Muscle Augmentation (Rtg 1-4)	Bio	0.2 / Lvl	31,000 / Lvl	
Orthoskin (Rtg 1-4)	Bio	0.25 / Lvl	6,000 / Lvl	
Symbiotes (Rtg 1-4)	Bio	0.2 / Lvl	4,000 / Lvl	

Augmentation	Type	Essence	Cost (¥)	Effect
Synthacardium (Rtg 1-3)	Bio	0.1 / Lvl	4,000 / Lvl	Enhanced heart. +1 to Athletics tests per level.
Cerebral Booster (Rtg 1-3)	Bio	0.2 / Lvl	31,500 / Lvl	Neural enhancements. +1 Logic per rating level.
Cerebellum Booster (Rtg 1-2)	Bio	0.2 / Lvl	50,000 / Lvl	+1 Intuition per rating level.
Sleep Regulator	Bio	0.1	12,000	Requires only 3 hours of sleep for a full rest.
Toxin Extractor (Rtg 1-6)	Bio	0.2 / Lvl	4,800 / Lvl	+1 to toxin resistance per rating level.
Tracheal Filter (Rtg 1-6)	Bio	0.1 / Lvl	4,500 / Lvl	+1 to inhalation toxin resistance per rating level.
Adrenaline Pump (Rtg 1-3)	Bio	0.75 / Lvl	55,000 / Lvl	Triggers temporary STR, AGI, REA, and WIL boosts. Deals stun damage after use.
Bone Density Augmentation (Rtg 1-4)	Bio	0.3 / Lvl	5,000 / Lvl	+1 Body for damage resistance and +1 Unarmed DV per rating level.
Cyber-Gills	Bio	0.3	12,000	Allows breathing underwater by extracting oxygen from H2O.
Pain Editor	Bio	0.3	60,000	Ignore wound modifiers to dice pools, cannot feel pain or tell when taking damage.
Leónization	Genetic	0.0	2,500,000	Anti-aging treatment. Resets physical age to prime, but introduces long-term spontaneous cellular degeneration risks.
Nanite Hunters (Rtg 1-3)	Nanoware	0.1	10,000 / Lvl	Specialized nanites that hunt foreign hostile nanites, infections, and grey goo in the bloodstream. +2 resistance per level against nanite/goos attacks.

Augmentation	Type	Essence	Cost (¥)	Effect
Internal Nanite Hive	Cyber	0.5 / Lvl	15,000 / Lvl	Internal cyber-factory that breeds specialized nanites (healing, sensory, etc). Slowly regenerates nanoware without external refills.
Living Crystal Plating	Grey Goo	0.5 / Lvl	25,000 / Lvl	Highly illegal plating formed from controlled grey goo crystallization. +2 Armor and +1 to resist magic per level, but vulnerable to resonance strikes.

Item	Type	Rating / Stats	Capacity	Cost (¥)	Description
Armor Jacket	Armor	12	10	1,000	Standard runner gear. Highly customizable.
Ares Sleeping Tiger	Armor	14	14	13,500	Extremely high-end, discreet armor.
Heavy Mil-Spec Armor	Armor	18	15	35,000	Extreme combat armor. Restricted.
Chameleon Suit	Armor	12	8	5,000	Grants +2 Dice to Stealth tests.
Actioneer Business Clothes	Armor	8	5	1,500	Discreet, stylish armored suit.
Armor Clothing	Armor	6	4	450	Normal-looking clothes with basic ballistic weave.
Lined Coat	Armor	9	8	900	Classic shadowrunner trench coat. Conceals weapons well.
Custom Fit	Armor Mod	-	-	500	Tailored specifically to the wearer. Adds +1 Concealability to hidden weapons.
Synthleather Jacket	Armor	8	6	200	Common, cheap protection.

Item	Type	Rating / Stats	Capacity	Cost (¥)	Description
Ares Predator V	Heavy Pistol	Dam: 8P, AP: -1	—	725	Includes built-in Smartlink (requires DNI to use).
Defiance T-250	Shotgun	Dam: 10P, AP: -1	—	450	Devastating in close quarters.
Shiawase Arms	Light Pistol	Dam: 5P, AP: 0	—	400	Semi-automatic light pistol.
Hearth Protector	Light Pistol	Dam: 6P, AP: -2	—	600	Built in silencer.
Silenced Pistol	Melee	Dam: (STR+2)P, AP: -2	—	300	Standard military-issue combat knife.
Combat Knife	Thrown	Dam: (STR+1)P, AP: -1	—	50	Balanced for throwing.
Throwing Knives	Melee	Dam: 7P, AP: -8	—	1,500	Blade edged with monofilament wire. Slices through armor.
Monofilament Knife	Exotic Melee	Dam: 12P, AP: -8	—	3,000	A specialized whip carrying a monofilament edge at the tip. High glitch penalty.
Monofilament Whip	Weapon Mod	-	-	150	Reduced penalties to drawn weapons.
Concealed Quick-Draw Holster	Gear	Range: 30m	—	500	Shoots a miniature grappling hook with micro-filament line capable of holding 250kg.
Micro-Grapple Gun	Exotic Ranged	Dam: Toxin, AP: -	—	500	Shoots DMSO mixed compounds straight through normal armor.
Ares Squirt Gun	Weapon Mod	-	-	125	Emits a visible laser to boost accuracy by +1.
Laser Sight	Exotic Ranged	Dam: 6P, AP: -4	—	4,500	Rare laser pistol. Silent, recoilless, visually traceable when fired.
Ares Laser Pistol					

Lifestyle	Monthly Cost (¥)	Description & Mechanics
Street / Squatter	0 / 500	Sleeping in the gutters or an abandoned, unheated building. Healing times are doubled.
Low	2,000	Crappy apartment, soy-paste meals. Matrix connection is spotty (frequent Background Noise penalties).
Middle	5,000	Safe, secure, decent food. Standard existence.
High	10,000	Luxury condo, real meat, clean air. Gain +1 Die on all downtime healing tests.
Luxury	100,000+	Penthouse suites, clone banks, private arcology wings. Gain +2 Dice on all downtime healing tests, immune to minor lifestyle inconveniences (Matrix outages, traffic).
Coffin Motel (Temporary)	20 / night	A 2x1x1 meter sleeping tube. Secure enough, but induces claustrophobia.
The "Null" Zone (Squatter variant)	1,000	A deliberately offline, EMP-shielded bunker space in the Barrens. Immune to casual Matrix scanning, but provides no Grid access.

V. THE “WEIRD AF” WORLD: BTLs & Manifestations

3. Lifestyles (Monthly Upkeep) The grey goo didn’t just change the Matrix; it changed how digital information interacts with the physical world. The new street craze isn’t

just experiencing a BTL (Better-Than-Life) chip in your head—it’s letting it out.

1. “Manifestation” BTL Chips (The Fuchsia Dragon)

These highly illegal, experimental BTLs utilize the ambient nanites in the user’s body and environment to physically project or temporarily transform the user.

BTL Type	Mechanic / Rule	Side Effects (Glitch / Overuse)
Holo-Manifest BTL (e.g., "Johnny Cash")	The chip overrides the user’s AR signature and manipulates ambient nanites to create a flawless, hard-light physical disguise. Mechanic: Grants +4 Dice to Disguise/Performance.	Essence Burn: User must resist 4 Stun (WIL + BOD). A Glitch causes the persona’s memories to bleed into the user’s, causing temporary amnesia of their true self.
Physical Override BTL (e.g., "Fuchsia Dragon")	A localized Possession by a dormant Matrix Sprite. The nanites violently restructure the user’s outer epidermis. Mechanic: +3 STR, +3 BOD, Unarmed attacks deal +2 Physical Damage and have Reach. Lasts (Essence) minutes.	The Abomination Risk: If the user takes Physical damage exceeding their Willpower while transformed, the Sprite takes permanent control (Inhabitation). They become a feral, dual-natured shock-troop NPC.

2. Specialized Entities & NPCs Your homebrew heavily features unique Awakened/Digital beings. Here is how to stat and run them:

Entity Type	Example / Concept	Rules & Mechanics
Crystalline Spirit	Ancient beings of order.	The Bootloader: These spirits can cast a unique ritual that takes 1 hour. It transmutes physical matter into "Living Crystal," creating a permanent physical vessel for a bodiless AI, granting the AI an Astral Aura.
Spirit of Man	(Ennis) A spirit guiding AIs to "Awaken."	Manifestation: Appears human (often reading AR news). Can interact with the nanite-Matrix organically without DNI. Can grant wild dice to AIs or Sprites making Matrix/Resonance tests.
Ascended AI	(Sam) Born from appliances, forged in Bug City.	Overkill Protocol: If Sam acts in combat, he automatically uses Wild Dice for all weapon attacks. If crossed, he ignores collateral damage. Has an Essence of 6 and a massive physical drone body.

VI. LIFE PATH CHARACTER CREATION (Optional)

The Life Path system provides an alternative or supplementary method to standard Karma-buy generation. Inspired by classic sci-fi RPGs but adapted to the Shadowrun 7th Edition D6 dice pool system, it generates

a character's history in 4-year terms, granting Karma pools, Skills, Attributes, Nuyen, and narrative elements like Essence changes or Contacts.

1. Origins & Backgrounds Roll 1D6 or choose a background. You gain a pool of 10 Karma specifically dedicated to the listed Skills, or you gain +1 rating in one of the listed Skills (up to a maximum rating of 4).

D6	Origin	Starting Skills / Benefits
1	Corporate Arcology	Academics, Computers, Etiquette
2	The Barrens	Survival, Unarmed Combat, Street Navigation
3	SINless Drifter	Con, Stealth, Scavenging
4	Rural Awakened	Animal Handling, Survival, Arcana
5	Street Gang	Intimidation, Pistols, Blades
6	Matrix Junkie	Hacking, Hardware, Electronics

2. Pre-Career Education (Ages 18-21) Attempt to enter higher education before starting a career. * **Corporate University:** Qualification: LOG + Academics (Threshold 2). If successful: Gain +1 LOG or +1 EDU (Knowledge skill), and 15 Karma for Knowledge/Technical skills. Graduation: INT + Academics (Threshold 3). If successful, graduate with honors, gain +1 Etiquette, and +1 Dice Pool on Corporate Qualification checks. * **Magical Academy:** (Requires Awakened Quality). Qualification: INT + Arcana (Threshold 2). If successful: Gain +1 MAG (up to max) or 15 Karma for Magical skills. Graduation: WIL + Spellcasting/Conjuring (Threshold 3). If successful, gain 1 Free Spell or Spirit Name and +1 Dice Pool on Magical Initiate Qualification. * **Military Training:** Qualification: BOD + Athletics (Threshold 2). If successful: Gain +1 BOD or +1 STR, and 15 Karma for Combat skills. Graduation: WIL

+ Firearms/Melee (Threshold 3). If successful, gain +1 Dice Pool on Military/Mercenary or Lone Star Qualification checks. * **Street Schooling:** Automatic qualification. Gain 10 Karma for any Street or Active skills. You learn the hard way. Gain a Contact (Rating 1).

3. Career Terms (4 Years Each) For each term, follow these steps: 1. **Qualification:** Roll Attribute + Skill against the listed Threshold. If you fail, you must choose the Drifter/SINless career or be Drafted (Military) for this term. 2. **Survival:** Roll Attribute + Skill against the listed Threshold. If you fail, roll on the Mishap Table for that career and you are ejected from the career (must change careers next term). 3. **Events:** If you survive, roll 2D6 on the Career Event Table. 4. **Advancement:** Roll Attribute + Skill against the listed Threshold. If successful, gain an

extra roll on the Benefits table when you leave the career, and increase your Rank. If you roll a Critical Glitch, you are fired (ejected). 5. **Benefits:** For every term completed, you gain 1 roll on the Career Benefits table when you finally muster out. Advancing ranks gives +1 roll per rank. 6. **Aging:** Starting at age 34 (after 4 terms if you start at 18), make an Aging Check (see below).

Career Profiles

Corporate Wage Slave * **Qualification:** LOG + Computers or Etiquette (Threshold 2) * **Survival:** WIL + Etiquette (Threshold 2) * **Advancement:** INT + Negotiation (Threshold 3) * **Benefits Table (1D6):**

Roll	Benefit
1	+5 Karma (Knowledge Skills)
2	5,000¥
3	+1 LOG or INT
4	10,000¥
5	Corporate Contact (Rating 2)
6	Mid-level Lifestyle (1 Year)

• Mishaps Table (1D6):

Roll	Mishap
1-2	Corporate downsizing. Ejected. Gain 1,000¥ severance.
3-4	Betrayed by a rival. Ejected. Gain an Enemy (Rating 2).
5	Caught in a shadowrun crossfire. Suffer a physical injury (lose 1 Physical Attribute point or pay 10,000¥ for cyberware, losing 0.5 Essence).
6	Burned out. Lose 1 WIL. Ejected.

Lone Star / Knight Errant Cop * **Qualification:** BOD + Firearms or Unarmed (Threshold 2) * **Survival:** REA + Firearms (Threshold 3) * **Advancement:** LOG + Investigation (Threshold 3) * **Benefits Table (1D6):**

Roll	Benefit
1	+5 Karma (Knowledge Skills)
2	5,000¥
3	+1 LOG or INT
4	10,000¥
5	Corporate Contact (Rating 2)
6	Mid-level Lifestyle (1 Year)

• Mishaps Table (1D6):

Roll	Mishap
1-2	Corporate downsizing. Ejected. Gain 1,000¥ severance.
3-4	Betrayed by a rival. Ejected. Gain an Enemy (Rating 2).
5	Caught in a shadowrun crossfire. Suffer a physical injury (lose 1 Physical Attribute point or pay 10,000¥ for cyberware, losing 0.5 Essence).
6	Burned out. Lose 1 WIL. Ejected.

Ganger / Syndicate Member * **Qualification:** STR + Intimidation (Threshold 2) * **Survival:** REA + Street Navigation (Threshold 2) * **Advancement:** CHA + Intimidation (Threshold 3) * **Benefits Table (1D6):**

Roll	Benefit
1	+5 Karma (Knowledge Skills)
2	5,000¥
3	+1 LOG or INT
4	10,000¥
5	Corporate Contact (Rating 2)
6	Mid-level Lifestyle (1 Year)

• **Mishaps Table (1D6):**

Roll	Mishap
1-2	Corporate downsizing. Ejected. Gain 1,000¥ severance.
3-4	Betrayed by a rival. Ejected. Gain an Enemy (Rating 2).
5	Caught in a shadowrun crossfire. Suffer a physical injury (lose 1 Physical Attribute point or pay 10,000¥ for cyberware, losing 0.5 Essence).
6	Burned out. Lose 1 WIL. Ejected.

Smuggler / Courier * **Qualification:** REA + Piloting or Navigation (Threshold 2) * **Survival:** INT + Piloting (Threshold 2) * **Advancement:** LOG + Negotiation or Mechanics (Threshold 3) * **Benefits Table (1D6):**

Roll	Benefit
1	+5 Karma (Knowledge Skills)
2	5,000¥
3	+1 LOG or INT
4	10,000¥
5	Corporate Contact (Rating 2)
6	Mid-level Lifestyle (1 Year)

• **Mishaps Table (1D6):**

Roll	Mishap
1-2	Corporate downsizing. Ejected. Gain 1,000¥ severance.

Roll	Mishap
1-2	Corporate downsizing. Ejected. Gain 1,000¥ severance.
3-4	Betrayed by a rival. Ejected. Gain an Enemy (Rating 2).
5	Caught in a shadowrun crossfire. Suffer a physical injury (lose 1 Physical Attribute point or pay 10,000¥ for cyberware, losing 0.5 Essence).
6	Burned out. Lose 1 WIL. Ejected.

Magical Initiate * **Qualification:** MAG + Arcana (Threshold 2) (Requires Awakened) * **Survival:** WIL + Assensing (Threshold 2) * **Advancement:** MAG + Spellcasting/Conjuring (Threshold 3) * **Benefits Table (1D6):**

Roll	Benefit
1	+5 Karma (Knowledge Skills)
2	5,000¥
3	+1 LOG or INT
4	10,000¥
5	Corporate Contact (Rating 2)
6	Mid-level Lifestyle (1 Year)

• Mishaps Table (1D6):

Roll	Mishap
1-2	Corporate downsizing. Ejected. Gain 1,000¥ severance.
3-4	Betrayed by a rival. Ejected. Gain an Enemy (Rating 2).
5	Caught in a shadowrun crossfire. Suffer a physical injury (lose 1 Physical Attribute point or pay 10,000¥ for cyberware, losing 0.5 Essence).
6	Burned out. Lose 1 WIL. Ejected.

Rock Star / Media Icon * **Qualification:** CHA + Performance (Threshold 2) * **Survival:** WIL + Etiquette or Con (Threshold 2) * **Advancement:** CHA + Leadership or Performance (Threshold 3) * **Benefits Table (1D6):**

Roll	Benefit
1	+5 Karma (Knowledge Skills)
2	5,000¥
3	+1 LOG or INT
4	10,000¥
5	Corporate Contact (Rating 2)
6	Mid-level Lifestyle (1 Year)

• Mishaps Table (1D6):

Roll	Mishap
1-2	Corporate downsizing. Ejected. Gain 1,000¥ severance.
3-4	Betrayed by a rival. Ejected. Gain an Enemy (Rating 2).
5	Caught in a shadowrun crossfire. Suffer a physical injury (lose 1 Physical Attribute point or pay 10,000¥ for cyberware, losing 0.5 Essence).
6	Burned out. Lose 1 WIL. Ejected.

Street Racer / Drone Jockey / Delivery Driver * **Qualification:** REA + Piloting (Threshold 2) * **Survival:** REA + Piloting (Threshold 2) * **Advancement:** INT + Mechanics (Threshold 3) * **Benefits Table (1D6):**

Roll	Benefit
1	+5 Karma (Knowledge Skills)
2	5,000¥
3	+1 LOG or INT
4	10,000¥
5	Corporate Contact (Rating 2)
6	Mid-level Lifestyle (1 Year)

• Mishaps Table (1D6):

Roll	Mishap
1-2	Corporate downsizing. Ejected. Gain 1,000¥ severance.
3-4	Betrayed by a rival. Ejected. Gain an Enemy (Rating 2).

Roll	Mishap
5	Caught in a shadowrun crossfire. Suffer a physical injury (lose 1 Physical Attribute point or pay 10,000¥ for cyberware, losing 0.5 Essence).
6	Burned out. Lose 1 WIL. Ejected.

4. Generic Event Table (Roll 2D6 for all Careers if Survival passed)

2D6	Event
2	Disaster! Roll on the Mishap table, but you are not ejected.
3	You uncover a dark secret. Gain a Contact, but also an Enemy.
4	Cross-training. Gain +5 Karma in a skill outside your career.
5	Assignment to a hazardous zone (e.g., The Barrens). Gain +1 Survival or Street Navigation.
6	You form a deep connection. Gain an Ally (Rating 2 Contact).
7	Standard term. Gain +5 Karma for any Career Skill.
8	Therapy and grounding. Recover 0.5 Essence (up to your maximum, reflecting holistic healing of trauma), or gain +1 WIL.
9	A lucrative side-hustle. Gain 1D6 x 2,000¥.
10	You save someone important. Gain a powerful Corporate or Syndicate Contact (Rating 3).
11	Breakthrough! Gain +1 to any Attribute (up to metatype max).
12	Exceptional success. Automatically succeed on Advancement check and gain +1 roll on Benefits.

5. Aging & Essence Tracking Starting at **Age 34** (typically after completing 4 terms), the wear and tear of the 6th World catches up to you. At the end of your 4th term, and every term thereafter, make an **Aging Roll**: Roll 2D6 and subtract the number of terms you have completed. * **Positive Result**: No effect. You age gracefully. * **0**: Reduce one Physical Attribute (BOD, AGI, REA, STR) by 1. * **-1**: Reduce two Physical Attributes by 1. * **-2**: Reduce three Physical Attributes by 1. * **-3 or lower**: Reduce all physical attributes by 1, and one Mental Attribute by 1.

Essence and Aging: If a stat is reduced to 0, you suffer an Aging Crisis. You must spend 20,000¥ on life-saving medical care or cyber-prosthetics. If you take the cyber-prosthetics, the Attribute returns to 1, but you lose 1.0 Essence.

Anti-Geriatrics (Anagathics): You can take Anagathics starting at age 34 to halt the aging process. While on Anagathics, you add the number of terms since you started taking them as a positive modifier to your Aging Roll. However, Anagathics cost 1D6 x 10,000¥ per term, putting

you deep in debt if you cannot pay.

6. Mustering Out (Retirement) When you decide to stop running terms and begin “adventuring” (the start of the campaign), tally up your Benefits rolls. You get 1 roll per term successfully completed, plus 1 additional roll for every Rank you advanced. You may distribute these rolls between your final Career’s Benefits Table or a general Cash Table (1D6 x 5,000¥). Calculate your final Essence, Attributes, and Karma, and you are ready for the shadows.

VII. COMBAT & WEAPONRY (D6 System Integration)

Guns are loud, lethal, and in the 6th world, often smart-linked to a DNI that can be hacked if you aren’t careful.

1. Ranged Weapons Attack Roll: Agility + Firearms. Defense Roll: Reaction + Intuition.

Weapon	Type	Damage	AP	Ammo	Notes / Features
Streetline Special	Hold-out	6P	+1	6 (c)	Easily concealed. -2 to opponent's Perception to spot.
Colt Government 2066	Heavy Pistol	8P	-1	14 (c)	Reliable. Built-in basic smartlink.
HK-227	SMG	7P	0	28 (c)	Can fire in Burst Fire (BF) mode (reduces defender's pool by 2).
Ares Alpha	Assault Rifle	11P	-2	42 (c)	Full Auto (FA) capable (reduces defender's pool by 4). Underbarrel grenade launcher.
Ranger Arms SM-5	Sniper	14P	-4	6 (m)	Extreme range. Requires Aim action to use full AP.

Ammo Type	Cost Multiplier	Effect on Damage / AP	Special Rules
Standard	x1	Base	Base
Armor Piercing (APDS)	x4	-	AP -4
Explosive (EX)	x2	+1 Damage	AP -1
Gel / Stick-n-Shock	x1.5	-2 Damage (Stun)	AP +2
Nanite-Buster (Grey Goo)	x10	+2 Damage	AP -2

VIII. HEALING & DOWNTIME

2. Ammo Types & Modifications Because Essence is tied to your soul and the nanite-environment, healing is both biological and spiritual.

1. Nanite-Induced Cyberware Affliction (N.I.C.A.)

Due to the pervasive nature of grey goo and ambient nanites in the 6th World, individuals with compromised immune systems or heavy exposure to raw nanite environments may develop N.I.C.A., commonly known as "Scrap-Sickness" or "Rogue 'Ware".

- **Vector:** Inhalation or prolonged skin contact with highly concentrated, unsanctioned grey goo or feral nanite swarms.

- **Symptoms:** The body's immune system fails to reject or mistakenly identifies ambient nanites as friendly building materials. The nanites spontaneously begin constructing crude, unintended cybernetic or bioware structures within the host's body using trace minerals from their bloodstream and environment.

- **Mechanics:**

- **Incubation:** 1D6 Days after extreme exposure.
- **Progression:** Every week, the host must make a Body + Willpower test (Threshold 4).
- **Failure:** The host spontaneously develops a random piece of low-grade cyberware or bioware (GM's discretion or roll on a random table). This forced implantation costs the standard Essence but provides the mechanical benefits. However, it is excruciatingly painful,

causing 1 box of unhealable Physical damage per week until treated, and the cyberware is often visibly jagged, protruding, or functionally erratic (glitching on 1s and 2s).

- **Cure:** Requires intensive medical intervention: an Extended Biotech + Logic test (Threshold 16, 1 Day interval) using specialized Nanite

Hunters or an Internal Nanite Hive, costing thousands of Nuyen in medical supplies. Alternatively, finding a localized "Null Zone" or EMP-shielded medical ward can halt the progression while surgery is performed to remove the rogue 'ware and restore lost Essence over months of therapy.

Healing Type	Mechanic	Timeframe / Interval
First Aid (Physical/Stun)	Roll Logic + Biotech. Net hits heal boxes of damage.	1 Combat Turn (Complex Action). Cannot heal magical Drain.
Natural Recovery (Stun)	Roll Body + Willpower. 1 Hit = 1 Box healed.	1 Hour interval.
Natural Recovery (Physical)	Roll Body x 2. 1 Hit = 1 Box healed.	1 Day interval. (Double time if living on Street lifestyle).
Essence Therapy	Roll Charisma + Psychology (Threshold 4). Success restores 0.1 lost Essence (from trauma, not cyberware).	1 Month interval. Costs 5,000¥ in therapy/retreat fees.

3. Resurrection Mechanics (Echoes of Death) Death in the Panopticon is rarely clean. The merger of the Gaiasphere and the Matrix means that when a metahuman soul departs, the ambient nanite grid and astral background react violently. Resurrection is possible, but it always leaves a scar on the soul and the world.

- **Burning Edge (The Classic Survival):** The most common method of cheating death. When a character's Physical Condition Monitor overflows beyond their Body rating, they may permanently burn 1 point of Edge to survive.
 - *Mechanics:* The character falls into a comatose state (0 boxes remaining on the Physical track) but stabilizes. They require immediate medical evacuation.
 - *Character Development:* They permanently lose 1 maximum Edge. Players are encouraged to describe a lasting physical or psychological trauma resulting from the near-death experience (e.g., severe cyberware damage, phantom pain, a new phobia).
- **The Lazarus Protocol (Nanite Reconstruction):** A forbidden, experimental procedure utilized by high-end corp black clinics and desperate shadow-docs. If a body is recovered within 1 hour of death, a concentrated slurry of medical-grade grey goo can be used to violently rebuild the damaged organs.
 - *Mechanics:* Costs 250,000¥ and requires a Biotech + Logic [10] Extended Test (1 Hour interval).
 - *Character Development:* The process consumes a massive amount of the soul's essence, costing a permanent **-1.0 Essence**. Additionally, the character immediately acquires the *Scrap-Sickness (N.I.C.A.)* negative quality and the *Digital Ghost* quality, as their body is now saturated with semi-feral nanites.
 - *Storyline Implications (Show, Don't Tell):* Surviving the Lazarus Protocol paints a target on the runner. G.O.D. Antibodies view the reconstructed runner as an anomaly—a walking glitch. The character might find their AR feeds occasionally bleeding with raw machine code, or notice Matrix entities pausing to stare at them with empty, glowing eyes. Spirits may recoil from them, their aura now tasting of ozone and burnt silicon.
- **Digital Ascension (The Ghost in the Machine):** If a character is killed specifically by biofeedback while connected via Hot-Sim or while jumped into a vehicle/drone, their physical brain boils, but their consciousness can be "uploaded" into the Gaiasphere.
 - *Mechanics:* The physical body dies permanently. The character is instantly converted into an AI/Digital Entity. They lose all physical attributes (Strength, Agility, Body) but retain mental attributes. Their Essence becomes fixed at 6 (Digital).

- *Storyline Implications (Show, Don't Tell)*: They are now a ghost. The world is a stream of cold data. The character can only interact with the physical world by inhabiting drones or paying other runners to carry them on secure commlinks. Their old friends speak to them through screens, their voices filtered and distant, a constant reminder of the flesh they left behind.
- **Cold Storage (The Arcade Revival)**: A bizarre, metareal phenomenon where the Gaiasphere attempts to “re-spool” a violently deleted consciousness from latent data and ambient nanites, dumping them into a surrogate body constructed from grey goo.
 - *Narrative Trigger*: When a character is killed or incapacitated beyond recovery, their consciousness awakes in a surreal, dream-like construct: an empty neon-lit arcade. “You walk up to an arcade game and there are two quarters on the console. The arcade is titled ‘ShadowRun’. Turning around there is an exit sign and a bright white door stiletto. Putting in a quarter lets you revive your character.”
 - *Mechanics*: The character is revived, and all physical damage is repaired with gamma-level cyberware. They regain three-fourths (3/4) of their physical and stun damage tracks. However, **all equipment, weapons, and armor on their person at the time of death are permanently consumed** by the nanite swarm used to rebuild them.
 - *The Cost*: The character immediately ascends to **Level Three on the Headcase Quintet Scale**.

The Headcase Quintet Levels The Headcase Quintet represents a unique form of Cognitive Fragmentation Disorder (CFD) where nanite infection links multiple minds into a localized, hive-mind-like network. Levels can go up or down based on RP and events. If a character overuses a power, the level goes up; if they, as a group, choose to go down a level, it decreases. The Quintet can be forcibly broken apart, but it will cause physical and essence damage. It is always a personal choice.

- **Level One (Initial Infection)**: The infection vector was usually through a simsense rig (e.g., viewing corrupted, anomalous video feeds). The character receives involuntary Matrix Perception, un-natural physical regeneration, and access to basic CFD powers.
- **Level Two (The Cohort)**: The character gains total, unbidden awareness of other Quintet members—their location, thoughts, presence, and abilities. They possess permanent Matrix perception and the complete set of CFD powers. They become, essentially, a Sense8 cohort.
- **Level Three (A Bridge Too Far)**: The characters begin experiencing active personality damage, bleeding, and merging. This level is usually only reached if a member leaves, becomes incapacitated, dies, or is resurrected via *Cold Storage*. Characters at this level receive roleplaying bonuses for voluntarily picking flaws and negative attributes to compensate for their deteriorating, shared mental condition.

IX. STEALTH IN THE PANOPTICON: Hiding from the Goo

If the air you breathe and the water you drink are crawling with nanites, how do you sneak into a Wuxing black site? You don't just hide your body; you have to hide your data-shadow.

1. Signature Spoofing (Matrix Stealth) Physical stealth (Agility + Sneaking) still works against biological eyeballs, but to bypass the ambient gaiasphere/Matrix, a hacker or rigger must actively mask the team's AR signatures.

- **The “Spoof Signature” Action**: A Complex Action requiring a DNI. The hacker rolls Logic + Hacking against the local Grid/Host's Rating x 2.
- **Sustaining**: This is a Sustained Action. While sustaining, the hacker takes a -2 penalty to all other actions.
- **Effect**: On a success, the hacker creates a localized “white noise” bubble of dead nanites around the team (Radius = Hacker's Logic in meters). Anyone

inside the bubble is invisible to automated Matrix sensors and Patrol IC.

- **Faraday Suits**: Runners can wear specialized Faraday-weave suits. This grants +4 dice to physical Sneaking tests against sensors, but makes you completely unable to use wireless tech or DNI while fully sealed.

X. TECHNOMANCERS: Kings of the Weird

While Deckers force the nanites to obey via code, Technomancers speak to the grey goo on a biological, instinctual level. They don't use decks; their brains are the decks.

1. Fading (Technomancer Drain) Shaping reality with your mind exhausts the nervous system. Technomancers resist Fading using Willpower + Resonance. Like magical Drain, if the Fading value exceeds the Technomancer's Resonance rating, it deals Physical damage instead of Stun.

2. Complex Forms (Nanite Shaping) Technomancers weave “Threads” instead of casting spells.

Complex Form	Target	Fading	Effect
Puppeteer	Device	Lvl + 1	Forces a device to take an action as if the Technomancer was the owner.
Resonance Veil	Matrix	Lvl - 1	Creates a flawless illusion within the nanite grid (e.g., faking a clearance badge or a fire alarm).
Goo-Spike	Persona	Lvl + 2	Violently commands ambient nanites inside the target's gear to short out. Deals Matrix damage equal to Level + Net Hits.

3. Compiling Sprites (Physical Manifestation)

Sprites are no longer just code. When compiled, they swarm ambient physical matter (dust, trash, loose electronics) to build a temporary physical body.

- **Mechanic:** Roll Resonance + Compiling vs. Sprite Level. Fading equals the Sprite's hits x 2.
- **Manifestation:** A compiled Sprite is Dual-Natured. It has a physical Body and Armor rating equal to its Level, and attacks using its Level + Resonance.

XI. HOPEPUNK & EDGE MECHANICS

In a grim, cyberpunk dystopia merged with an uncaring eldritch gaiasphere, genuine empathy is a superpower. "Hopepunk" means fighting for humanity and treating the weird children of the matrix (AIs, Sprites) with respect.

1. Using Edge Edge represents luck, grit, and the universe pushing back.

- **Spend 1 Edge:** Reroll all failed dice on a test.
- **Spend 2 Edge:** Negate a Glitch (turns it into a normal failure).
- **Spend 3 Edge:** Activate the Rule of 6 for an entire dice pool (all 6s explode).
- **Spend 4 Edge:** Automatically establish a Tether on a target or automatically soak all incoming Biofeedback/Drain.

2. Regaining Edge (The Hopepunk Triggers) Players start each session with Edge equal to their Edge attribute. GMs should award 1 Edge point during the game when a player:

- Takes a significant physical risk to protect a bystander or innocent NPC.
- Treats an Awakened/Digital entity (like Sam or Ennis) with genuine empathy and humanity, rather than treating them like a tool.
- Sacrifices a payday or personal gain to do the "right" thing.

XII. DESTABILIZATION (The "Spark+" Problem)

What happens when a BTL-manifested persona, a physical AI drone body, or a Crystalline Spirit takes too much damage? The grey goo loses cohesion.

Entities relying on nanites for physical form have a Destabilization Track.

- **The Trigger:** Whenever a manifested entity takes Physical damage that exceeds their Body rating in a single hit, or if they critically Glitch, they must roll to stabilize.
- **The Test:** Roll Body + Willpower (Threshold equals the damage taken or 3 for a Glitch).
- **Failure (Destabilization):** The entity's physical form begins to dissolve into grey goo. They immediately take an unresistable 2 boxes of Physical damage. Additionally, for the rest of the scene, any Wild Dice they roll that come up as a 1 or 2 count as a Glitch trigger.
- **Total Breakdown:** If their physical condition monitor fills up, they don't just fall unconscious—their physical shell melts into a puddle of inert nanites. (If it's a runner using a BTL, they suffer severe Essence trauma and take 10 unresistable Stun damage).

XIII. SOCIAL RULES: Street Cred & Comms

You can't just text your Fixer on an open commlink anymore. The silence is speaking volumes.

1. Secure Comms & Street Cred

- **Secure Comms:** Standard commlinks are assumed to be monitored by the gaiasphere. To arrange a secure meet, runners must use pre-arranged physical dead-drops or encrypted pulses (like Kyber's three short, pause, two long).
- **Street Cred & AIs:** Your Street Cred (Karma earned divided by 10) directly impacts how AIs and

Spirits view you. When rolling Etiquette or Negotiation with an Awakened or Matrix entity, you may add your Street Cred to your Dice Pool if you are known to treat non-humans well. If you have Notoriety for betraying AIs, that number is subtracted from your pool.

2. Influence Resolution (Advanced Social Conflict)

Not every conflict is a firefight. Sometimes you need to talk your way out of a Knight Errant frisk or negotiate a better deal with an angry ganger. When a social encounter involves opposed objectives, it becomes an advanced social conflict.

The Basics:

- **PCs use Influence**, measuring their sway over the target.
- **NPCs use Resolve**, measuring their resistance to the PC's influence.
- The conflict ends when either **Influence equals the NPC's Willpower** (the NPC agrees, yields, or believes the lie) or **Resolve equals the PC's Willpower** (the NPC becomes intractable and no further social attempts will work).

Charisma-Related Tests: Players make an opposed Charisma-related test (e.g., Con, Negotiation, Intimidation) vs the NPC's resisting attribute.

- *Resisting Social/Manipulation:* Willpower + Charisma
- *Resisting Logic/Evidence:* Willpower + Logic
- *Resisting Intimidation/Force:* Willpower + Strength

If the PC wins, they gain **1 Influence + 1 per net hit**.

If the NPC wins, they gain **1 Resolve + 1 per net hit**.

Note: A tie is a success with no net hits, granting 1 point to the winner.

Social Modifiers:

- **Attitude:** Ranges from +3 (Friendly/Aligned Objectives) to -3 (Hostile/Opposed Objectives). This modifies the PC's dice pool only.
- **Leverage:** Ranges from +1 (Slight Advantage) to +3 (Serious Advantage, like hard evidence or a gun to their head). This modifies either party's dice pool, depending on who holds the leverage.
- **Hopepunk / Notoriety:** Against digital or awakened entities, a character's Street Cred (Hopepunk) or Notoriety may act as permanent Leverage (+/-).

Using Edge in Social Conflict: Just like physical combat, Edge is vital in social conflicts.

- **Push the Limit:** Spend 1 Edge to add Edge rating to the roll and apply the Rule of 6 (explosive 6s).
- **Second Chance:** Spend 1 Edge to reroll all non-hits (especially useful for saving a critical argument).

- **Seize the Initiative (Get Revenge):** An NPC may spend Edge to immediately take a free Charisma-related test against a character who just tested them, simulating a counteroffer, counterthreat, or red herring.
- **Assist (Push Forward):** A character who fails a test may spend 1 Edge to convert any hits they did get into a Teamwork bonus for an ally's immediate subsequent test (the classic "Good Cop/Bad Cop" routine).

XIV. BESTIARY & ADVERSARIES

1. Wuxing "Null-Sec" Strike Teams Wuxing knows the world is a panopticon, so their elite black ops teams don't just hide—they erase themselves from reality. They deploy in specialized "Null-Suits" that act as localized Faraday cages, scrubbing their AR signatures and isolating them from the nanite-grid. They are heavily armed, disciplined, and terrifyingly silent in the Matrix.

Attributes: BOD 4 | AGI 5 | REA 4 (5) | STR 4 | WIL 4 | LOG 3 | INT 4 | CHA 2 | ESS 4.2 **Initiative:** 9 + 2D6 (Wired Reflexes I) **Condition Monitor:** Physical 10 / Stun 10

Skills: Firearms 6, Sneaking 5, Close Combat 4, Perception 4, Athletics 3. **Gear & Augmentations:** * **Wuxing Null-Suit** (Armor 14): Grants immunity to Matrix actions and Tethers (they have no wireless DNI). Grants +4 dice to physical Sneaking tests against nanite-sensors. * **Ares Alpha** Assault Rifle: (Damage 11P | AP -2 | Ammo 42). Smartlinked via internal fiber-optics, not wireless. * **Stun Baton:** (Damage 9S(e) | AP -2).

Squad Tactics (The "Spotter"): Null-Sec teams operate completely off the grid, which means they are blind to the Matrix. To compensate, every 4-man squad is accompanied by a Wuxing Spotter (usually an Aspected Magician or a loyal Technomancer) who stays in the backlines, sustaining Signature Masking over the team and calling out target locations. Kill the Spotter, and the team loses their tactical advantage.

2. Feral "Fuchsia Dragon" Abominations These were once regular people looking for an escape through the new physical-manifestation BTLs. They pushed too hard, their physical forms destabilized, and the rogue Matrix Sprites inside the chips permanently inhabited them. Now, they are twisted, dual-natured shock troops—fleshy abominations scaled in hardened, fuchsia-colored nanites.

Attributes: BOD 7 | AGI 5 | REA 5 | STR 6 | WIL 4 | LOG 1 | INT 4 | CHA 1 | ESS 1 (Corrupted) **Initiative:** 9 + 2D6 **Condition Monitor:** Physical 12 / Stun 10

Skills: Close Combat 8, Running 5, Perception (Smell/-Matrix) 5, Intimidation 6. **Armor:** Subdermal Nanite Scales (Armor 10) **Weapons:** * **Nanite Claws / Bite:** (Damage 8P | AP -2). These attacks are treated as magi-

cal/digital and can strike dual-natured or manifested entities.

Special Rules: * **Dual-Natured:** They exist in the physical world and the Matrix simultaneously. They can be targeted by Spells and Matrix Data Spikes, but they can also physically punch a manifested AI. * **Grey-Goo Regeneration:** The rogue nanites constantly repair their host. At the end of every Combat Turn, the Abomination heals 1 box of Physical damage. Weakness: Damage caused by Fire, Magic, or Nanite-Buster ammo cannot be regenerated. * **Feral Surge:** If the Abomination rolls a Wild Die and it comes up as a 6 (3 hits), it enters a frenzy and may take an immediate, free Close Combat attack action against the nearest target (friend or foe).

3. G.O.D. “Antibodies” (Grid Immune Responses)

Grid Overwatch Division is no longer a room of corporate deckers. It is an autonomic immune response generated by the merged gaisphere. When a hacker rolls a 1 on a Wild Die, the grid detects an “infection.” Ambient nanites in the room violently swarm together, pulling in dust, trash, and air moisture to build a terrifying, faceless humanoid made of Living Crystal and white light.

Attributes: BOD 6 | AGI 6 | REA 6 | STR 5 | WIL 7 | LOG 7 | INT 6 | CHA 1 | ESS 6 **Initiative:** 12 + 3D6 **Condition Monitor:** Physical 11 / Stun 12

Skills: Cybercombat 8, Hacking 7, Close Combat 6, Perception 6. **Armor:** Hard-Light Crystal Shell (Armor 14) **Weapons:** * **Bio-Luminescent Whip** (Physical): (Damage 10P | AP -4 | Reach 2). Slices through matter like a plasma torch. * **Neural Purge** (Digital): (Complex Action). The Antibody floods a Tethered target with raw gaisphere noise. Target resists with WIL + BOD. Damage is 8 Stun (Biofeedback).

Special Rules: * **Auto-Tether:** The moment the Antibody manifests, it automatically possesses 1 Tether on the Hacker who triggered the Wild Die glitch. * **The Boot-loader:** It physically spawns within 5 meters of the offending Hacker’s meat-body. It will attempt to destroy the Hacker’s physical brain, or fry their deck, whichever is faster. * **Dissipation:** The Antibody is a temporary immune response. It dissolves back into inert dust and grey goo if its Physical Condition Monitor is filled, OR if the Hacker successfully jacks out (taking Dump Shock) and drops off the grid.

4. HMMVV Infected (Ghouls & Vampires) The Human-Metahuman Vampiric Virus (HMMVV) radically alters the physiology and psychology of its victims. In the modern Panopticon, these creatures face both the threat of grid immune responses and natural bigotry.

General Infected Rules:

- **Essence Drain:** All HMMVV infected must consume Essence to survive. Failure to consume at

least 1 Essence per month results in physical degradation, leading to death or becoming mindless ferals.

- **Dual Natured:** All Infected are active on both the physical and astral planes simultaneously.
- **Infection Transfer:** Biting, clawing, or Essence Drain transfers the HMMVV virus. Victims must resist with Body + Willpower.

The Zkazena Ghoul (Strain III)

In the toxic, magic-heavy environment of Zkazena (like Crispyopolis), ghouls are highly adapted to scavenging and surviving where ambient nanites and toxic spirits roam.

- **Attributes:** BOD +2 extbar STR +1 extbar REA +1 extbar WIL +1 extbar CHA -2 extbar INT -1
- **Qualities:** Natural Weapon (Claws/Bite: DV 4P, AP -1), Dietary Requirement (Metahuman Flesh), Reduced Sense (Blindness), Enhanced Senses (Smell, Hearing).
- **Zkazena Adaptation:** “Containment Surge Frenzy” - When ambient magic spikes, these ghouls enter a frenzied state, gaining +1 Die on physical actions and ignoring the first box of damage on any track.

The Ancient Vampire (Strain I)

Unlike feral ghouls, Strain I vampires retain their intellect and magical aptitude. They are apex predators who often manipulate society from the shadows.

- **Attributes:** BOD +1 extbar AGI +1 extbar STR +2 extbar WIL +2 extbar LOG +1 extbar CHA +2
- **Qualities:** Essence Drain, Regeneration (Heals 1 physical damage per turn, disabled by sunlight or wood), Severe Allergy (Sunlight).
- **Magic:** Many vampires are Awakened, retaining or gaining Magician status upon infection.

GM Advice: Running Combat in the 6th World

- **Make them choose their ammo:** If the runners are fighting Wuxing, standard APDS ammo is best. But if a G.O.D Antibody spawns or a Fuchsia Dragon attacks, they will desperately wish they had loaded expensive Nanite-Buster rounds. Let them use 1 Action to swap magazines if they thought ahead!
- **The Horror of the Abominations:** Describe the Fuchsia Dragons tragically. Underneath the glowing scales and feral roars, there is still a metahuman weeping. This plays into your “Hopepunk” theme—killing them should feel like a tragic necessity, and trying to subdue them non-lethally (Stun damage) should be rewarded with Edge.
- **Antibodies are forces of nature:** Do not treat a G.O.D Antibody as a normal enemy. It is a natural disaster. When it drops, the objective of the encounter immediately shifts from “Win the fight” to

“Survive and Escape.”

XV. THE SHADOW ECONOMY: Trading in the Panopticon

When the gaiasphere and the Matrix merged, the Corporate Court thought they had finally won. They thought they could track every nuyen ever spent via the nanites. But the shadows always adapt.

1. Currency & “Goo-Scrubbing” Digital Nuyen is still the standard, but spending it without leaving a data-trail is harder than ever.

- **Hot Nuyen:** Buying illegal gear with standard, un-

scrubbed Nuyen automatically grants the corporate grid a Tether on the buyer.

- **Scrubbed Credsticks:** Standard certified credsticks must be actively “scrubbed” to remove ambient nanite-tracking.
- **Mechanic:** A Decker or Technomancer must roll Computer + Logic (Threshold 4). Success cleans the stick. A Glitch accidentally wipes the funds entirely. Fixers charge a 10% laundering fee to do this for you.

2. The New Gold Standard: Barter Because digital money is inherently risky, the black market has reverted heavily to a barter system.

Commodity	Black Market Value	Description / Use
"Clean" Tech	2x Nuyen Value	Hardware that has been physically isolated in a Faraday cage since before the merge. Prized for its inability to be tracked by the gaiasphere.
Pure Biologicals	500¥ per Liter/Kilo	Real meat, purified water, and uncontaminated soil. Highly prized by ghouls, hermetic mages, and high-society fixers trying to avoid nanite-infection.
Living Crystal	5,000¥ per Ounce	The byproduct of Crystalline Spirits. Used by AIs to build physical bodies, and by Wuxing for experimental BTL tech.
Raw Karma	Priceless	Spirits (like Ennis) and ancient AIs rarely care about money. A runner can permanently trade 1 Karma to an Awakened entity in exchange for a massive favor or a rare artifact.

3. Smuggling & “Null-Bags” You can’t just put an illegal sniper rifle in a duffel bag anymore; the gun’s nanites will broadcast its shape and serial number to the local grid.

- **Null-Bags:** Smugglers use Faraday-weave canvas bags to transport goods.
- **Mechanic:** A rating 1-6 Null-Bag costs (Rating x 500¥). It reduces the AR signature of anything inside by its Rating. However, if a Null-Bag is punctured (takes any Physical damage in combat), the items inside immediately light up the grid, triggering local Patrol IC.

XVI. CONTACTS & LEGWORK: Silence Speaks Volumes

You can’t just call your Fixer on a commlink. As your adventure notes, “the silence is starting to speak volumes.” Legwork in the 6th World is physical, paranoid, and highly

encrypted.

1. Communication Protocols

- **The Dead Drop:** Physical locations completely shielded from the Matrix (lead-lined safes, flooded subway tunnels).
- **Encrypted Pulses:** Short-range, line-of-sight communication using localized kinetic or light pulses (like Kyber’s three short, pause, two long).
- **Mechanic:** Intercepting a pulse requires an Opposed Test (Perception + Intuition vs. the sender’s Sneaking + Agility).
- **The “Toaster” Method:** Digital entities like Sam do not have commlink numbers. They find you. Sam might temporarily possess a nearby vending machine, a holographic billboard, or a smart-fridge to give you a job.

2. The Hopepunk Social Modifier How you treat the weird children of the Matrix matters. Your Street Cred (Total Karma earned divided by 10) directly impacts your social rolls.

- **The Empathy Bonus:** When rolling Negotiation or Etiquette with an AI, Sprite, or Spirit, add your Street Cred to your Dice Pool if you are known to treat non-humans as people.
- **The Tool Penalty:** If you have Notoriety for betraying AIs, enslaving Sprites, or acting like a corporate sociopath, your Notoriety is subtracted from all social pools with Awakened/Digital entities.
- **Buying Contacts:** During downtime, players may spend Karma to purchase important NPCs they've helped as Contacts. The Karma cost is equal to the desired Connection Rating x 3.

XVII. KEY NPC PROFILES: The Movers and Shakers

Here is how to run the specific contacts mentioned in your Necessity Knows No Law adventure lore.

Sam (The Ascended AI Patron) Born from household appliances in Bug City, Sam loves humanity but forgets how fragile they are.

- **Connection:** 6 | **Loyalty:** Variable
- **The Vibe:** Sam acts like an over-enthusiastic, slightly unhinged game show host. He genuinely wants to help the runners, but he views the world through the lens of action movies and chaotic variables.
- **The Overkill Mechanic:** If the runners call Sam for fire-support or Matrix backup, Sam will solve the problem, but he will do so with catastrophic collateral damage. (e.g., If asked to open a locked door, Sam will detonate the building's gas main to blow the door off its hinges).
- **Payment:** Sam pays generously in scrubbed Nuyen, but always includes a "Toy"—a highly experimental, wildly dangerous piece of unreleased tech that he wants the runners to field-test (often with a high chance of Glitching).

Ennis ("The Only Choice" - Spirit of Man) A spirit guiding AIs to Awaken. Appears as a rumpled man with a cane and steampunk AR glasses.

- **Connection:** 4 | **Loyalty:** 5 (to AIs/Technomancers)
- **The Vibe:** A tired, patient mid-wife to a new species. He views Shadowrunners as necessary protectors for his "children" (manifesting Sprites and AIs). He is polite, melancholy, and immensely powerful.
- **The Boon:** Ennis can grant the "Wild Channeling" metamagic temporarily to a runner. If a runner treats an AI with profound empathy or risks their life to save a digital entity, Ennis may touch them,

allowing them to turn up to 3 dice into Wild Dice on their next critical test.

Kestrel (The Missing Fixer) Kyber and Cryptolock's primary lifeline, currently ghosted.

- **Connection:** 5 | **Loyalty:** 4
- **The Mystery:** Kestrel hasn't been captured; she has gone into "Deep Null." She realized Wuxing compromised the local grey-goo and cut all digital ties to protect her roster.
- **Mechanic for Finding Her (The Breadcrumb Trail):** Runners cannot roll Matrix Search to find Kestrel. They must run an Extended Test (Tracking + Intuition, Threshold 12, Interval: 1 Day).
- **The Catch:** They can only roll this by finding physical clues—bribing street-kids, finding a specific analog graffiti tag, or locating a burnt-out Null-Bag. If they roll a 1 on a Wild Die during this search, Wuxing intercepts their physical trail.

Summary of the "Weird AF" Vibe Check for the GM

When running this merged ruleset, keep the following in mind: * **The Matrix is Everywhere:** Do not ask if something is connected to the Matrix; ask how deeply. A puddle of water can theoretically be used to relay a signal if a Technomancer pushes hard enough. * **Magic is Unpredictable:** Play up the Background Count. If the runners are in a corporate sterile zone, the mana void should feel suffocating. If they are in a feral, overgrown urban ruin, the Wild Dice should be flying constantly. * **Identity is Fluid:** With AIs having Essence, BTLs manifesting physically, and spirits turning data into crystal, the central theme of your campaign is: "What does it mean to be alive?" Reward players (with Karma or Edge) for engaging with NPCs like Sam and Ennis on an emotional, philosophical level.

Balancing Baseline Formulas

To ensure consistency and allow automated tools (like `balance_generator.py`) to function properly, the following mathematical formulas serve as the baseline for calculating costs in this ruleset.

Metatype Karma Cost Formula

- **Base Cost calculation:** Calculate the sum of the maximum limits for all 9 core Attributes (BOD, AGI, REA, STR, WIL, LOG, INT, CHA, EDG).
- Subtract 56 from this total.
- Multiply the difference by 15 Karma. If the result is negative, the base cost is 0.
- **Trait Modifiers:**
 - Thermographic Vision: +10
 - Low-Light Vision: +5
 - Built Tough (Rating): +10 per Rating point
 - Reach (+1): +5
 - Reach (+2): +10

- Reach (+3): +15
- Allergy: -15
- **Final Cost:** The final calculated sum is then rounded to the nearest multiple of 5.

Weapon Nuyen Cost Formula

- **Base Cost:** 100¥
- **Damage Value (DV):** Add $DV^2 \times 2$
- **Armor Piercing (AP):** If **AP** is negative, add Absolute Value(**AP**) * 50
- **Firing Mode:**
 - Full Auto (**FA**): +500
 - Burst Fire (**BF**): +200
 - Semi-Auto (**SA**): +50

- **Recoil Compensation (RC):** Add $RC \times 100$
- **Ammo Capacity:** Add $AMMO\ COUNT \times 5$
- **Category Multipliers:**
 - Pistols or Hold-Outs: Multiply the running total by 0.8
 - Sniper Rifles, Cannons, or Machine Guns: Multiply the running total by 1.5
- **Rounding:**
 - Values > 10,000¥ are rounded to the nearest 1,000
 - Values > 1,000¥ are rounded to the nearest 100
 - Values > 100¥ are rounded to the nearest 50
 - Values ≤ 100¥ are rounded to the nearest 10

XV. ADVANCED TACTICAL COMBAT

The 6th World is a brutal, unforgiving place. Combat in confined spaces or challenging environments relies on a mix of classic, deadly physics and modern AR interference.

1. The "Chunky Salsa" Effect (Explosives in Confined Spaces) Explosions in enclosed environments are significantly deadlier due to shockwave reflection off hard surfaces.

- **The Rule:** When a grenade or explosive device detonates in an enclosed area (such as a small room, a corridor, or behind **Heavy Cover**), the blast wave rebounds. To simulate this efficiently without calculating exact geometric angles, the explosive's Base Damage is **multiplied by 2** against all targets in that specific confined zone before applying blast drop-off modifiers.
- **Collateral:** The structure itself takes this doubled damage, potentially destroying the cover entirely and exposing the targets for the next Combat Turn.

2. Cover Modifiers Cover physically stops bullets and disrupts AR targeting algorithms.

- **Light Cover:** (e.g., foliage, chain-link fences, thin drywall). Grants +1 to the Defense Pool.
- **Medium Cover:** (e.g., ruined cars, thick wooden doors, chat piles). Grants +2 to the Defense Pool.
- **Heavy Cover:** (e.g., reinforced concrete, plasteel barriers, banking counters). Grants +4 to the Defense Pool. If an explosive detonates on the *same side* as the combatant, the Chunky Salsa effect applies.

3. Environmental & Initiative Modifiers The battlefield itself is a weapon.

- **Lighting & Visibility:** Dim light, smoke, or heavy rain imposes a flat -1 to -3 penalty to all Attack and Perception dice pools.
- **Background Count / Noise:** Dense AR noise or magical voids impose a flat penalty to Matrix/Magic actions (e.g., -1 to -4) and force the use of **Wild Dice** for those tests.
- **Superior Positioning:** Taking the "High Ground" or flanking an opponent grants a flat **+1 Initiative Die** for the duration of the encounter, reflecting the tactical advantage.
- **Surprise:** If a combatant successfully ambushes a target, they receive a **+2 bonus to their Base Initiative Score** for the first Combat Turn.
